recommend the same material for finishing a floor that you would for a door. One is to be looked at and admired, the other is to be walked on, jumped on, has to withstand mud and water, furniture, pianos, sewing machines, etc., rolled over it and still be an object of admiration. Granitine Floor Finish for natural finish and Chijap Floor Lac for stained finish stand lots of abuse. They wear on the job, not off.

Manufactured only by

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 10, 1906.

Trade is in a good healthy condition and for the time of year the amount of business passing must be considered surprising, as it is in many quarters. During the week prices have been steadily maintained, no change being noticeable in the quotations. Window glass is in very good demand at figures quoted. Turpentine is on the quiet side. Linseed oil presents no new features. Other lines are normal.

LINSEED OIL—Situation remains unchanged. Our quotations are as follows: Raw, 1 to 4 barrels, 52c.; 5 to 9 barrels, 51c.; boiled, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.

TURPENTINE—Demand is fair at prices quoted: Single bbl., 86c. per gal.; two barrels or over, 85c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC— The market remains unchanged at following prices: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD—Conditions are unchanged since last report. Prices remain as follows: Genuine red lead in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

GUM SHELLAC—Prices remain unchanged as follows: Fine orange, 60c. per lb.; med. orange, 55c. per lb.; bleached shellac (white) 65c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—The market is on the quiet side. Our quotations are as follows: Firsts in cases, 8 1-2c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

GASOLINE—The ruling quotation at present is 24c. in bbls.

BENZINE—There is nothing new this week and we are still quoting 20 1-4c in barrels.

BENZINE—A decline has occurred and we are now quoting 20 1-4c. in bbls.

WINDOW GLASS—We quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.95; third break, 100 feet, $4.25; fourth break, 100 feet, $4.50; fifth break, 100 feet, $4.75; sixth break, 100 feet, $5.25; seventh break, 100 feet, $5.75; eighth break, 100 feet, $6. Diamond star, first break, 50 feet, $2.05; second break, 50 feet, $2.25; first break, 100 feet, $3.90; second break, 100 feet, $4.30; third break, 100 feet, $5.25; fourth break, 100 feet, $6; fifth break, 100 feet, $7; sixth break 100 feet, $7.50; seventh break, 100 feet, $8.50. Double thick, first break, 50 feet, $3.20; second break, 50 feet, $3.50; first break, 100 feet, $6.25; second break, 100 feet, $6.50; third break, 100 feet, $8.25; fourth break, 100 feet, $9.50; fifth break, 100 feet, $11; sixth break, 100 feet, $12; seventh break, 100 feet, $13.50; eighth break, 100 feet, $16; ninth break, 100 feet, $17.50; tenth break, 100 feet, $19.50; eleventh break, 100 feet, $23.50; twelfth break, 100 feet, $28.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, Aug 10, 1896

A falling off is at last reported and business is now down to the average Summer trade, all lines appearing to feel the effect of the hot weather.

Savannah reports show advances in turpentine on the southern market but not enough to make any change in Toronto. Rosins have been active with advances made in all grades. Linseed oil is stationary with seed receipts in England very light.

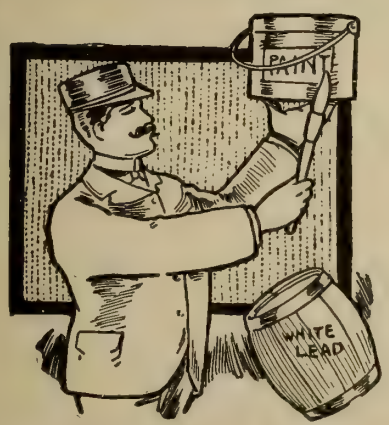
A report that one Toronto supply house is cutting heavily on white lead has not made any change as yet, but if the condition continues it is likely to demoralize matters somewhat.

WHITE LEAD — Ex Toronto, pure white, $6.30; No. 1, $5.92½; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; ½c. per pound extra will be charged for 12½ pound packages; genuine dry white lead, in casks, $5.40.

TO THE VARNISH BUYER

the most serious considerations are quality, reliability and uniformity, and these qualifications are of special importance to the dealer who is trying to build up a permanent varnish trade.

Berry Brothers' label or brand may be safely relied upon as ensuring the above conditions.



Our varnishes are the safest goods to handle and the surest and most reliable goods to use.

PUTTY—Ordinary, bladders in barrels, $1.80 ; pure linseed oil, $2 to $2.10; bulk, in 800-lb. casks, $1.50 ; pure, $1.95 to $2 ; 100-lb. kegs, 25c. extra.

LIQUID PAINTS—Pure, $1.20 to $1.35 per gallon ; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.

CASTOR OIL—English, in cases, 9½c. to 10c. per lb., and 11c. for single tins.

REFINED PETROLEUM—Trade continues normal. We quote : Canadian prime white, 14c. ; water white, 16c. ; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM — We quote : Canadian, $1.38 ; Pennsylvania, $1.64 ; Ohio, 98c.

HOUSE PAINTS.

(Continued from page 42.)

sideration, most of the tints used, blacks, siennas, umbers, etc., require an excessive amount of oil to bring them to a proper consistency ; for example, while with the above white paints there would be about 10 lbs. or a little more of pigment in a gallon of paint, to be spread over say 350 square feet, two coats, with many of these tints there would be less than 5 lbs. of pigment in a gallon of proper brushing consistency. This would be an economy as far as the paint manufacturer was concerned, just as it is cheaper to make a so-called pure paint running high in zinc oxide but with only 7 or 8 lbs. of pigment to the gallon, as some manufacturers do. However, such paints do not have enough pigment to properly protect the oil and hence lack in durability.

For this reason and because the coloring matter supplies the necessary hiding powder, a marked gain in every direction — color, durability, and working quality—can be made by using at least 15 per cent. of an inert base and some lead sulphate. The writer's preference in this case is for a combination of floated barium sulphate and calcium carbonate, the calcium carbonate to insure the neutralization of any traces of acidity in the oils and pigments used and to act with the barium sulphate as a protective filler which will increase to the maximum the amount of pigment present, particularly in the case of colors carrying an excess of oil. In this way many cases of blistering due to excess oil and improper drying can be avoided.

FILLING CANS BY MACHINE.

An ingenious little machine has recently been introduced in connection with the filling of paints, enamels, varnishes, and similar materials into tins. The apparatus consists of an ordinary beam scale with platform. On the platform is placed the can to be filled, and the exact weight at which it is desired the can when filled shall turn the scale is carefully adjusted on the beam. Above the mouth of the can is fixed a pipe connected with the supply of material which is being canned off. The electrical appliance consists of a small motor coupled up with the electric current which passes through the beam. As soon as the beam rises owing to the platform falling with the weight of the can and its contents, a circuit is made, and an automatic cut-off acts at the end of the supply pipe, instantly stopping the flow. Hence, while the can contains full weight (according to the point at which the weight on the beam is fixed) it contains the merest fraction more, and a very considerable saving is effected. All who have had to do with the calculation of sources of loss in manufacturing practice are aware how serious an item overweight is liable to become. This little appliance would appear to be likely to save such leakages, besides effecting a considerable saving in time.

A BRASS CLEANER.

There are many acids that clean brass, such as oxalic, nitric, muriatic, etc., but the method used at all arsenals is perhaps the best for the purpose, says the Painter. Make a mixture of one part nitric and one part of sulphuric acid in a stone jar or crock, having also ready a bucket of fresh water and a box of sawdust. Dip the article into the acid, or, if too large to go in to the crock, wash the brass with a swab or brush, then dip into the water, after which dry with the sawdust. This will make the brass brilliant. If the brass is dirty, then clean it off with strong sal-soda water. If the sign is in position and cannot be taken down, and is only dark with verdigris, then clean with putz powder. The peculiarity of this powder is that the brass afterwards holds its brightness a longer time than where ordinary cleansers are used. At least this has been our experience.

THE JUSTICE OF ESTABLISHED PRICES

O. A. Keyser, advertising manager, the Dover Manufacturing Co., writes that his company's policy of maintaining fixed minimum wholesale and retail prices on asbestos sad irons has been many times more successful than critics prophesied and they have found that dealers in general fully approve of established prices, and show their appreciation of a policy which asures them profit both by themselves adhering to prices under all circumstances and also by seeing that others do likewise.

Some dealers are not convinced that price maintaining is practical. When once their minds are satisfied that a price maintaining policy is reasonable, they will heartily subscribe to it.

Mr. Keyser writes as follows:

Ruinous Competition.

Every business man is in business to make money. If conditions become such that the money-making possibilities of a business are jeopardized, immediate steps are taken to remove those conditions altogether or to limit their harmfulness.

The worst enemy of profit is undue competition. When my competitor acquires such an advantage over me that my chances of making money are limited or imperiled, I must endeavor to overcome my competitor's prestige or remove myself from the sphere of his competition.

There are two sure ways by which the retail dealer can overcome unfair competition: First, by selling goods which his competitor cannot get; second, by selling goods which his competitor cannot sell at less than a certain fixed price.

Since the retailer must buy manufactured goods, it is evident that he must go to the manufacturer for assistance in keeping certain goods out of the hands of his competitors and for establishing fixed minimum prices. It is therefore evident that the retailer needs the co-operation of the manufacturer.

Reciprocity.

Right here it may be said that the manufacturer is not forced to distribute his goods through any particular channel. He at first may have reason to place the distribution with one or more classes of trade. If he finds that course most advantageous to himself, he will doubtless continue in it. On the other hand, if the class of trade with which he has entrusted the distribution of his goods does not do the line justice or does not appreciate the privilege of distributing the line, the manufacturer is not compelled to limit his output to that particular class. However, the manufacturer is glad to co-operate with the distributer who will reciprocate by pushing his line. In establishing prices, the manufacturer must bear several things in mind. He must price his line with respect to its intrinsic value. He must make equitable prices for the several territories into which his goods are shipped, according to the differences in freight tariff. He must fix prices that will insure a profit to himself and at the same time leave a good margin of profit for the dealer.

If the prices are just and fair according to these conditions, the dealer should at all times see to it that the prices are not violated either by himself or his fellow tradesmen. Since minimum prices are established by the manufacturer for the protection of the retail dealer, it is only reasonable that the manufacturer should expect the retailer under all conditions to respect these prices. To violate a liberal policy is, to say the least, a small and ungrateful act. It belittles a dealer in his own eyes and in the estimation of his business associates.

Sometimes a dealer excuses his price cutting on a certain article by saying that Bill Jones, up the street, offered that article below the minimum price. Such an excuse is a poor one and shows lack of thought on the part of the dealer who makes it. Why not write to the manufacturer before meeting a cut price? Then the matter will soon be adjusted. Your price-cutting doesn't remedy matters, but makes things worse.

For instance, Bill Jones, up the street, sells an article below the minimum price. Now, John Smith thinks that he has to meet this price. Bill Jones, not to be outdone, makes another cut. Then John Smith follows suit. Soon Bill gets his selling price down to cost and John has to sell at a loss to go him one better. Now wait, gentlemen! What good does it do? If you have to sell at cost or below, why not close up your shop and go into retirement before your savings are exhausted in this game of cut-throat competition?

Be reasonable. When a manufacturer will leave nothing undone to insure a profit for you, don't spoil the whole thing by slashing prices into smithereens. Ask the manufacturer to arbitrate the matter, and he will be only too glad to do so.

Legal Right to Enforce Price Maintaining.

The manufacturer of a patented article has a legal right to enforce the maintaining of the prices which have been established by him.

Patent rights are granted in order to encourage the making of useful inventions. The only profit that an inventor gets out of his invention is that which comes from having the sole right to manufacture and market it. If an inventor were not protected in this matter, he would not have any inducement to think out problems and appliances that promote the welfare of humanity in general. The inventor is a public benefactor and deserves a reward for his ingenuity.

Now, if everyone could manufacture a new invention as soon as it is placed on the market, what incentive would inventors have to think out new appliances? It is to place a premium upon invention that the government gives the patentee of an invented article a monopoly as far as the making of that article is concerned.

Furthermore, of what value would this monopoly be to the patentee if he could not profitably market the article which he had invented? Suppose that the trade in general would slash the price until there would be no profit in distributing it to the public. What good would it do the patentee to manufacture his invention if its selling price has degenerated to the cost of production? It therefore stands to reason that the patentee's monopoly must include the marketing of his invention.

It has therefore been decided by the courts that the manufacturer of a patented article has the right by nature of his monopoly, to establish and maintain arbitrary prices on his patent. Whoever violates the established prices is an infringer and liable in damages.

Arbitrary Prices no Hardship.

At first thought it may seem that such a law is a violation of the seller's liberty, but such is not the case. A dealer is free to distribute the patented article in the prescribed manner or leave it entirely alone. By accepting the agency for a patented article, the dealer accepts all the conditions along with it. If he does not like the conditions he is at liberty to decide that he will not act as a distributor of the article.

This is no hardship. It is a protection. The dealer knows that his profit is assured by law, and if his competitor violates the prices which have been established, recourse for satisfaction may be taken in legal procedure. The manufacturer is in this way empowered to make the handling of his product advantageous to the dealer who wants to do a straight business with clean profit.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

The Goodroads Machinery Co., of Hamilton have assigned.

The York & Sunbury Milling Co. are to erect a $20,000 saw mill at Gibson, N.B.

The Peterboro Steel Rolling Mills Co. have been looking for a site for a plant at Peterboro.

The Western Canada Cement & Coal Co. will erect a half million dollar cement plant at Exshaw, Alta.

Finlay & Son, Norwood, N.B., are to remodel and enlarge their factory sites at Peterboro preparatory to increasing the size of their buildings.

Alderman J. G. Watson, of Calgary has purchased a site for a stone cutting establishment for which he is now in the east purchasing machinery.

The Havelock Electric Light Co. installed another water wheel in their powerhouse last week thereby increasing their plant to the extent of 300 h.p.

The Dominion Foundry Supply Co., incorporated under the Dominion charter has been licensed to do business in Ontario, with J. F. Gaffrey, Toronto, as its attorney.

It is reported that the Niagara Navigation Co. will build a new boat next Winter to run daily between Toronto and Port Hope, calling at the intermediate points.

The Steel Fence Post Co., of Toronto, has been granted an Ontario charter to manufacture all kinds of wire fencing material and machinery. The directors are H. Buckel and T. Patterson, all of Toronto.

The representatives of the Roller Bearing Co are negotiating with the town of Port Perry for the Madison Williams Foundry Building, as a factory in which to carry on the manufacture of roller bearings.

The Berlin Machine Works Co., Hamilton, have been granted an Ontario charter with a capitalization of $500,000, the directors being H. D. Yates, L. D. Forbes, F. L. Love, of Beloit, Wis.; Jno. Patterson and S. D. Biggar, of Hamilton.

The Canada Metal Co., Toronto, have been granted an Ontario charter with a capitalization of $100,000 to manufacture and deal in metals, and acquire the business carried on by Wm. G. Harris under the name of the Canada Metal Co. The directors are A. G. Harris, F. Harris and W. G. Harris, jr.

The Page-Hersey Tube & Lead Co., Guelph, has been granted an Ontario charter with a capitalization of $2,000,000 to take over the business of the Page-Hersey Iron & Tube Co., and manufacture and deal in all kinds of metals. The directors are S. P. Grosch, R. C. Donald and T. A. E. World, all of Toronto.

Messrs. Hammond J. Evans, G. C. Jordan, J. L. McAvity, St. John, N.B.; W. B. Evans, Minto, N.B.; E. G. Evans, Hampton, N.B.; H. B. Hay, Chipman, N.B.; H .Wilson, Coal Creek, N.B., are applying for incorporation as the Rothwell Coal Co., chief place of business at Minto, N.B. Capital, $12,000, divided into 240 shares.

The Woodstock city council is negotiating with the Canada Furniture Manufacturers, which company purposes to establish at Woodstock a large furniture manufacturing plant, at which from 300 to 600 men will be employed. The city is asked to provide for the loan and the matter will be referred to the ratepayers at an early date.

The feature of a special meeting of the Electrical Development Co., held this week in Toronto, was the emphasis given to the statement that the company would have a large surplus of power after supplying the demand on it from Canada. This will be sold in the United States, where there is already a demand for it on the part of several companies.

W. W. Murray, of the Majestic Wire Fencing Co., a Michigan concern, has been making a trip through Western Canada and has decided to establish factories at Winnipeg and Edmonton for the manufacture of wire fabric for concrete reinforcement, and all kinds of farm and lawn fencing. Mr. Murray expects to have his factories in operation this Fall, and to employ at least 100 men.

Messrs. G. F. Atkinson, Rexton, N.B.; John Nute, Portland, Me.; C. S. Hickman, A. J. Chapman, C. L. Hanington, J. H. Hickman, F. C. Palmer, Jas. Friel, W. F. Tait, all of Dorchester, N.B., and H. J. McManus, Memramcook, N.B., apply for incorporation as the Crown Wood Working Co. to manufacture children's sleds, sleighs, cars, etc., at Dorchester; capital stock, $50,000 of 500 shares.

The contract has been let for the Northwest Commercial Travelers' Association building at Winnipeg. The structure will be 99 by 66 feet, six storeys high. The whole first flat will be used for association purposes. The top flat will be a lodge room and the other offices will be used as offices and sample rooms. The wood finishings will be oak, and the stairways marble and iron. Contract calls for completion February 1 next.

BUILDING NOTES.

Fernie, B.C., will have a new post office 50 by 67 feet.

The Bank of Commerce building in Moose Jaw will cost $50,000.

Alanson Moore, Hamilton, is to build four brick houses to cost $8,800.

A permit has been issued for a drill hall at Hamilton to cost $225,000.

An $18,000 Jewish Synagogue will be erected on Terauley street, Toronto.

The Merrill Finance Company will build an apartment house in Vancouver.

The building permits issued in Montreal for the month of July amount to $950,000.

The Bank of British North America will spend $10,000 in alterations to its Hamilton branch.

The Northern Bank will erect a business block at Manor, Sask., the building to cost about $15,000.

According to a report from Moose Jaw, the C.P.R. intend to build a hotel at that place to cost $150,000.

The Northern Bank are having plans prepared for the erection of a bank building at Brandon, Manitoba.

J. Cohen has been granted permission to erect a four-story hotel on King street, Toronto, to cost $26,000.

An $80,000 apartment house is to be erected in Toronto on the corner of Wright and Roncesvalles avenues.

Architect Knechtel is preparing plans for a first-class hotel to be erected near the Grand Trunk Station at Berlin.

Tenders are being called for the galvanized iron work required on the new Grand Trunk elevator at Depot Harbor, Ont.

D. W. Bole, of the Bole Drug Co., Winnipeg, has purchased a site at Calgary, for a business structure to be built shortly.

The J. Coulter Co. have purchased a site on Lombard street, Toronto, for $15,000, and will erect a jewelry case factory on the site.

The Molsons Bank have taken out a permit for a new bank building to cost $70,000 to be erected on Bay street near King street, Toronto.

Up to August 1, the value of building permits issued in Toronto this year amounted to $7,388,905, an increase of over $1,700,000 over the same period a year ago.

The Bank of Commerce intend erecting in Montreal a bank and office building which will occupy the entire site of the present Temple Building on St. James street.

The Marks-Clavet-Dobie Co., Prince Arthur, have purchased a site for another large warehouse in which to store goods for their increasing grocer and hardware business.

It is announced that the C.P.R. is to spend over $300,000 in making improvements to their hotel at Banff, Alberta. The work will include the erection of a boiler and engine house, a laundry, and a new wing.

Lord Northcliffe, during his recent visit to Montreal made arrangements for the incorporation of the St. James Land and Hotel Co., with a capital of $3,000,000. The company will establish a first-class hotel in the royal city.

CHIEF "300"

Head of the Furnace Family

Why He Has No Rivals

As would be expected, the Economy "400's" were the best people in the Furnace Family by long odds, and would have been yet if Chief "300" hadn't started from our factory with his Grand Features.

"300's" trade title is

"300 Series" Economy Furnace

The base, ash-pit, grate and fire-pot are made of cast iron **and made very heavy.**

Heavy steel plate is used for the dome and radiator, and this plate is **riveted** together at **all joints, not bolted.**

Specially-constructed cup joints are used for all other connections.

"300 Series" is absolutely a **tight** furnace. No dust or gas ever escape **other** than **through** the **proper** channels.

Just ponder on this :—**There are over 73,000 cellars where you can see the "Economy Furnace" making householders happy !**

How many of the next 73,000 sales will be chalked up to your credit ?

Think of Noble "300" and the chance for such a Heat Brigade in your store !

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Buffalo Air Washer.

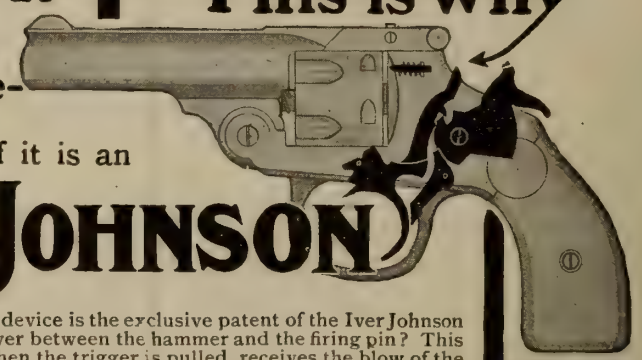
While the Buffalo (N.Y.) Forge Co. (Canadian office, Montreal) has been building air washers and humidifiers for years it has not said much about them in its publications or in the public press. However, the company recently decided to place before the engineering field data regarding the practical use and the results accomplished with the Buffalo air washer and humidifier, and catalogue No. 97 is the publication which contains full details. These equipments provide uniformly large supplies of air at a constant temperature in large buildings, mills, factories, theatres, public schools and other structures. The catalogue mentioned is replete with description, accompanied by photographic views and diagrams of an interesting nature.

Bowser's Oil Tanks.

S. F. Bowser & Co. have issued the 14th addition of their catalogue on the Bowser oil tank. These tanks are self measuring and adaptable to all kinds of oil, and all classes of wants. Those who are not familiar with the Bowser storage tanks and pumps would do well to ask for this catalogue.

Air Purifying System.

A very complete book on the subject of air purifying and cooling systems has been issued by Thomas & Smith, Chicago, Ill., manufacturers of the Thomas Acme air purifying and cooling system, for which Cluff Bros., Toronto, are Canadian representatives.



The book comprises 65 pages profusely illustrated with drawings showing the method of installation on the air washing aparatus in various plants in Canada and the United States. Sectional views of the apartus and full explanatory reading matter is also given. The whole bock making a valuable addition to the catalogue library of any plumbing and steamfitting concern that is large enough to handle the installation of a ventilating system. Copies of the book can be procured from Cluff Bros., Lombard street, Toronto.

Lewis Bros.' New Catalogue.

Catalogue No. 35, of Lewis Bros., Montreal, showing their extensive lines of guns, rifles, ammunition and sporting goods, has just reached Hardware and Metal. This catalogue, containing one hundred pages, is the largest of its kind ever issued by this firm, and contains everything that is new in guns, rifles, etc., as well as all the established lines of small arms and sporting goods. There is an index on the outside of the front cover of over seventy fine subjects treated in the catalogue, which facilitates finding the item or department sought for. Reloading tools and accessories occupy a portion of the book, with diagrams, amounts of ammunition to be used for different shooting, as well as the most improved methods for handling same. Thirty models of skates are shown, which cover all the different requirements needed both for pleasure, hockey and racing. A long list of hunter's accoutrements is also shown, and altogether the book is one of the most complete that has come into our hands. Bona fide dealers who are not already on Lewis Bros.' mailing list can get a copy on application.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

A Building Paper Circular.

Alex. McArthur & Co., Montreal, have issued a circular dealing with the building paper trade. The circular is under the heading "Building Paper Facts," and treats of the different lines manufactured by this firm. It is published in both English and French.

COPPER AS A WATER PURIFIER.

A correspondent of a medical paper says that for nearly a year all of the drinking water consumed in his home has been treated with copper. A strip of copper foil, or sheet copper, 9 inches square, is placed in a vessel containing from three to four quarts of water and allowed to remain from four to eight hours. The foil is first cleaned with powdered pumice, and retains its lustre for weeks unless the water contains a considerable quantity of sediment, and provided the quantity of water is renewed immediately each time upon drawing off the sterilized or purified water. On account of the varying amount of sediment, it has been found desirable to filter the water before treating it with copper foil. Up to this time no ill effects have been noted from drinking the water so treated, and in fact the general health of his family may perhaps be said to be better than usual, in that they have not had to consult a physician during this time. Another interesting observation is that the water being more palatable than boiled water, they consume larger quantities, which possibly has some influence on the general bodily condition.

Believing that many vegetables may also be a source of infection, they take the precaution to wash the vegetables to be eaten raw with copper-treated water, or to place them, particularly in the case of lettuce and celery, in a vessel of water along with a strip of clean copper foil and allow them to remain from two to four hours with occasional agitation.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading 2c. a word first insertion; 1c. a word each subsequent insertion.

PLUMBING AND STEAMFITTING

A NOVELTY IN HOT WATER HEATING.

By M. J. Quinn, Heating Engineer with Cluff Bros., Toronto.

While it may be true that "there is nothing new under the sun" it is equally true that in the experience of nearly every heating contractor there crops up from time to time problems in his line which call for careful consideration and the application of the knowledge gained not only by personal experience, but also by the experience of others, and, as we cannot all have the benefit to be derived from the actual planning and installing of every plant that contains any peculiarity, the next best thing is to read of what others have done and as the writer believes that a general exchange of ideas and experiences among the members of the plumbing and heating trades of this country would work out to their mutual advantage, he ventures to describe a hot water heating plant which he was recently called upon to design.

The chief difference between the plant referred to and that ordinarily installed is that the former has no boiler attached to it, but that, notwithstanding this apparent disadvantage the water is likely to be hotter and the circulation much more rapid and better distributed than in the average hot water plant.

To come to the point at once, the conditions are as follows:

In one of the plants of a very large corporation there is a tank about 12 x 25 x 6 feet, which is kept constantly full of very hot water received from other sources, and the heat so contained is lost by overflowing to the sewer and by radiation to the atmosphere and consequently up to the present time has been of no valve at all, because the water required for the boilers is only a fraction of that contained in the tank.

The corporation have recently acquired a fairly large sized building, however, and it was decided to use the hot water, which up to the present has been wasted, for heating this building, which, by the way, is about four hundred feet distant from the tank, and the accompanying sketch indicates the system of piping which will be used to accomplish the desired results.

Referring to the sketch (A) is the tank referred to, having an overflow (I), which is taken from the lowest part of the tank so that the coolest water runs through it, and, as was stated, it is situated about four hundred feet from the building shown on the right hand side of the picture .

The heating plant shown in the building is, in most respect, similar to that ordinarily installed, and in addition to the fact that the radiators are somewhat smaller than those usually required for hot water work, because the water available is very hot, the following differences will be noted.

In the first place the main flowpipe (D) is taken from a pump near the tank and supplies water to the radiators through risers (E), (E), (E), (E) and the return is through risers (F), (F), (F), which all unite with (G) in the basement.

It will be noted that the return pipe (G) instead of running direct back to the tank is first carried up to the top of the building and then down again, thence to the tank.

As will no doubt be plain, the object in running the return to a high point in this way is to prevent the radiators from becoming dry, especially those on a high level as would no doubt be the case if the pump simply drove the water into the system and it was allowed to run out again freely.

With the connections arranged as shown, however, while the return water may pass back to the tank without difficulty, every radiator is sure to be full of water, so long as the air is released.

In order to prevent the possibility of syphonage a vent is connected to the highest point of (H).

It will be noticed that some of the radiators are connected directly to (H), and in these cases the connections will be one size smaller than in the case of the balance of the radiators, so that the former may not receive more than their share of the hot water.

It will be seen that suction pipe (C), which is connected to pump (B) is run only slightly below the surface of the water because that is where the hottest water is to be found and as it can be discharged through (D) at almost any desired velocity, it is possible to use smaller pipes throughout the entire system than those used in an ordinary gravity system.

It is necessary, of course, to properly cover and insulate the hot water flow pipe where it passes through the ground and to provide valves at the lowest points for properly draining the system, but there is no doubt that it will give perfect satisfaction and have many advantages such as the entire absence of ashes not to speak of saving on fuel, and the putting to some use of energy that heretofore was entirely wasted.

TWINS FOR WALTER WRAY.

Walter Wray, of Wray & Morgan, Toronto, has been receiving congratulations and condolences from his friends in the trade in Toronto on account of the double increase in his family a few days ago. Mother and both daughters are doing well, and as a double baby carriage is a heavy purchase to make with prices cut so badly as they have been in Toronto this Summer, Mr. Wray's friends propose to pass the hat and arrange for a presentation at an early date.

THE PLUMBING OF A COTTAGE

By J. A. F. Cardiff in the National Builder, Chicago.
Article IX. (Continued.)

SOIL, WASTE AND VENT STACKS.

Figure 41 is a plumbing section showing the lay-out of a modern city house. Starting at the street sewer, the connection is made and run in to a point about two feet outside of the front wall of the house, in earthenware pipe, from which point it is continued through the foundation wall and cellar to the vertical stacks, leader, and yard and area drains, in extra heavy cast iron pipe.

The house trap is located in an accessible position just inside the front foundation wall and is provided with two clean-outs. Just inside the trap a tee fitting and an eighth bend are provided for the fresh air inlet pipe which is carried to the lawn in front, at least fifteen feet from any window or door, and capped with a return bend. If there is fresh air inlet, the area drain is connected up. A cast iron cesspool with an iron grating is set in and bush with the area floor, and the piping is carried in through the cellar and provided with a running trap just inside the wall.

Line "B" receives the discharge from the pantry sink on the first floor and a urinal on the second floor. The vent stack for this line is shown by dotted lines. It connects to the soil stack in the basement, and again on the second floor above the outlet of the urinal. The urinal is flushed from an overhead copper lined wood cistern, operated by pulling the chain.

Line "A" is the main soil line and receives the discharge from the wash tubs and kitchen sink on the first floor, the bath room fixtures on the second and

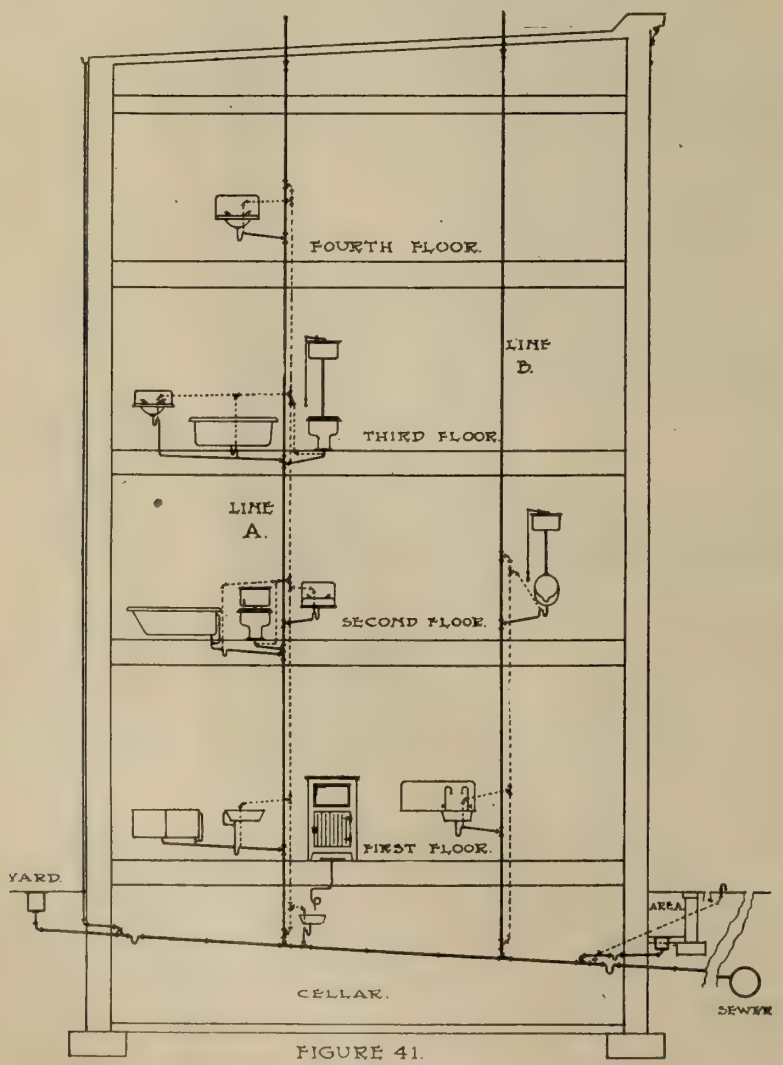

FIGURE 41.

not a space of at least fifteen feet from the front wall to the inside line of the sidewalk, the fresh air inlet should be carried to the curb as described in a previous number.

Just inside the connection for the third floors, and a lavatory in the servants' room on the fourth floor. The vent stack and its branches are indicated by the dotted lines.

A safe consisting of sheet lead turned over a beveled frame, is provided under the refrigerator on the first floor. It receives the drippings from the refrigerator and discharges them, through a trapped pipe, into a sink in the cellar. These safes should never, under any circumstances, be directly connected to the drainage system, as the water in the trap will quickly evaporate if the refrigerator is not used for a few days, thereby destroying the seal and permitting the foul air and gases from the system to enter. The discharge should be made into a sink, properly trapped and connected up, and provided with running water so that the trap seal will remain perfect. The waste pipe from the safe should be trapped so that the water in the trap will permit the dust or bad air from ascending through the waste pipe. The safe is provided for portable refrigerators but when a stationary refrigerator is built in, the safe may be omitted and the waste pipe connected directly to the refrigerator. In such a case the trap on the waste pipe not only prevents bad air and dust from ascending, but prevents the cold air in the ice chest from escaping.

The yard is drained in the same manner as the front area, except that the trap is controlled and kept sealed by the discharge from the leader.

AIR COOLING DEVICES.

A plant for cooling the air in the Brooklyn Bridge station of the subway is under construction. It is expected that it will be in operation before the end of next month, and if it is as successfal as is hoped, similar plants will be built at other stations.

The principle of the plant—or plants, for there are two of them, one on the uptown and one on the downtown side—is that of cooling air by passing it over cool water forced through large coils. There are fans to draw the fresh air in from the street, and also to force it into the station after it has been cooled

The water used in cooling the air is obtained from four driven wells, two at the northern end of each island platform. There is a pump capable of drawing 450 gallons of water a minute connected with each pair of wells. The water, which comes out at a temperature of from 52 to 62 degrees Fahrenheit, is conducted to two large coils of pipes, over which the air passes. Each coil contains four miles of small cast iron pipe, giving a surface sufficient to cool 75,000 cubic feet of air a minute. From the coolers the air will be distributed to the station through large galvanized iron ducts running over the four platforms. It is estimated that the temperature in stations will be lowered at least 15 degrees.

Several other cooling experiments will be tried this Summer, and by another season it is hoped to have all the stations equipped with the device that proves the most successful. Work is also going on now in making the openings between the stations, in which automatic valves are to be installed.

Granby, Que., has passed a by-law authorizing the expenditure of $100,000 for the purchase of a water works system.

WASTE DISPOSAL OF THE COUNTRY HOUSE

By A. S. Atkinson

The city plumber does not require an accurate and technical knowledge of systems for disposing of waste. His work is confined chiefly to making proper connections with the sewer pipes in such a manner as prescribed by municipal sanitary laws and regulations. In the country, however, the plumber is supposed to be familiar with conditions of sewage disposal that practically open a new field. The country house of to-day aims to secure health and comfort for its occupants, and this can not be achieved without some adequate precautions for disposal of the waste. The architect and sanitary engineer in a measure prescribe the methods of disposing of sewage in the large country house, but the small country home must depend upon the local plumber, and according to the measure in which he performs his duty faithfully and scientifically will his success in the end be counted.

There has grown up in the last five years an unusual demand for country plumbers who are also in a measure sanitary engineers. The improvement of the country home must depend upon the combined effort of the architect, builder and sanitary plumber. From the point of view of health and comfort, the latter is really more important than the other two. There should be needed little advice concerning the relative direction of the drainage. Most householders to-day are educated to a proper understanding of the pollution of drinking water by improper drainage from the house and barn. The slope of the land should determine the direction of the drainage, and where any system of cesspools or septic tanks are installed these should be in the opposite direction from the wells. If the land is practically level so that the drainage is somewhat uncertain, the cesspools and septic should be carried down below the level of the wells. Where there is any possible danger of the drainage leaking into the drinking water supply extraordinary means should be taken to avoid it. This should apply to a neighbor's supply of water as well as to the owner of the system.

Danger in Cesspools.

The use of cesspools is happily growing less in parts of the country where fine homes are being erected. At the best the cesspool is a weak apology for sewage disposal. Where conditions are favorable for their construction and operation, they may, however, give a degree of satisfaction in proportion to their effectiveness. There is nearly as much difference in cesspools as in any other kind of plumbing. Some of the old-fashioned ones are positive menaces to the life and health of the owners of country homes. The accumulation of filth in them continues until there is a need for radical reform, and then drastic measures are taken; but meanwhile sickness and death may come in advance.

It costs only a little more to construct a good cesspool than a poor one, but it requires adequate knowledge of the work and proper designing. The sanitary plumber who makes a specialty of this work generally finds his time well occupied, and in the long run he establishes a reputation that proves its own reward.

In the ordinary country home the plumber should seek to carry the waste a good distance from the house, making sufficient slope to the pipes to keep them well flushed out and clean. Having secured the right incline for the pipes and the proper distance for the cesspool, an excavation should be made large enough to accommodate all the drainage. The dimensions of the cesspool should be ascertained in advance, and then the excavation should be made at least two feet greater on all sides. If the soil is sandy the problem is simplified somewhat, for sand purifies the leaching material and tends to correct any overflow; but a thick, mucky or loamy soil soon gets clogged up with solid particles and renders the system inoperative. On the bottom of the cesspool a foot of broken stones, mixed with a little coarse sand should be placed. This layer should be firmly packed down and carried from one side to the other of the excavation. No dirt or loam should be allowed to fill the interstices of this layer of broken stones. Upon this a foundation of brick should be laid, extending within a foot of each wall. The bricks are laid close and firmly cemented together. Next the sides of the cesspool are built up of bricks, leaving a space of one foot between the outside of the bricks and the earth. This space is later filled with broken stones and coarse sand or gravel, the same as the bottom. The inside of the brick wall is carefully covered with Portland cement to make it water-tight.

Best Method of Construction.

One foot from the top of the brick work an opening should be left for the inflow pipe from the house, and six inches below this on four sides outlet holes should be provided. These outlet pipes should carry the surplus drainage from the water-tight brick inclosure into the layer of broken stone and sand outside. The outlet pipes should be turned down at either end and not upward. Likewise the inflow pipe should be turned down at least a foot in order to minimize any disturbance of the contents when flushed with a rapid flow from the house. Finally the brick work is carried up to the top, ending in an arch, with a manhole capping it. This manhole should be large enough to permit easy entrance to the cesspool from above.

In such a cesspool when the contents reach up to the outlet pipes a steady flow on all sides will carry the surplus to the outside layer of stones and gravel where it will be absorbed and filtered away. If the surrounding land is sandy the operation will be more satisfactory. In particularly heavy soil this layer of sand and stones could be made two feet wide with advantage. It is not desirable to carry much of the solid matter over into the surrounding soil. The object of this cesspool is to collect the solid matter so that it can be cleaned at intervals. A good deal of this solid matter will be decomposed and carried over as a liquid, but in time it will be necessary to clean it out. By having the cesspool watertight no part of it can be injured by the sewage and thus rendered difficult to clean. In the ordinary cesspool with loose joints, the filth which leaches through the mortar contaminates it so that cleansing is only partial, and in time it must be abandoned.

A watertight cesspool of this character is to a certain extent a primitive septic tank. Septic action goes on continually in the cesspool, and for this reason the contents should be disturbed as little as possible. The inflow pipe with its sharp downward bend admits the sewage in a way so that splashing and commotion of the contents are largely avoided. One of the principles of proper construction of the septic tank is that the contents shall be left undisturbed in the different chambers so that bacterial progress will not be interrupted.

Septic Tanks Most Satisfactory.

The construction of a perfect septic tank for the country home is of even more importance than the watertight cesspool. The septic tank is the method for sewage disposal that must eventually predominate. It has already been adopted by hundreds of inland towns and villages for disposal of sewage, and thousands of private country homes have their own separate plants. The fact that almost a perfect septic tank for the country home can be constructed for a few hundred dollars is an important recommendation in its favor. It should cost only a little more than the modern cesspool, and its action is more satisfactory and enduring. The merits of this system are not questioned by sanitary engineers of to-day, but there are many little points in its construction which must be carefully considered.

Where perfect septic action goes on all the solid material of sewage is completely disintegrated and destroyed so that it can pass off as gas or in the form of liquid. But if the conditions are not right, so that all the animal and vegetable matter is destroyed, the system gets clogged up, and the septic tank then proves as dangerous as it might be beneficial. Many failures with septic tanks have been due to faulty construction, and for this reason its use has been discontinued in localities where a trial was given. The responsibility of the plumber or sanitary engineer who recommends and constructs a septic tank for the country home is thus very great, and any failure to secure the best results is regretable.

One of the chief reasons of faulty operation is the continual agitation of the contents in the settling chambers, and another the leaking of walls and bottom, so that the sewage escapes and poisons the surrounding soil before it has undergone septic action. To guard against these errors it is essential that the tanks should be made perfectly watertight, and they should be divided into at least two chambers, with the liquid finally discharged through automatic siphons into sub-soil pipes.

Suggestions for Building a Tank.

The septic tank should be made twice as large as the ordinary cesspool so that when divided into two compartments there is ample room for the contents. The bottom of the tank should be formed of good concrete, so that no cracks or crevice is visible. The walls of the tank should be made of brick and coated with Portland cement on the inside to make them watertight. The walls should be built up the same as for the cesspool, but two arches, with a man-hole on each, should be built, one over the inlet compartment and the other over the set-

tling chamber. A brick wall should separate the two chambers, with no connection between except the overflow pipe which should be located three-quarters up from the bottom.

The sewage is discharged into the first chamber, which in turn should be divided in half by a brick wall, coated with Portland cement, and running within two feet of the top of the man-hole. An overflow pipe runs through this brick partition, and is placed on a level with the other overflow pipe leading into the settling chamber.

When the sewage flows into the first chamber all the agitation is confined to the first half of the receiving compartment, and as this is filled the overflow passes to the second compartment. In time the contents fill this and pass on to the settling chamber. In this compartment very little agitation takes place, and it is here that most of the septic action takes place. Before the contents pass on to the automatic siphon all the solid parts are disintegrated and destroyed.

Septic Action Explained.

We may not understand all the reasons for this process, but it has been sufficiently demonstrated that the millions of bacteria attack the solid parts of the sewage so that within a few hours all the solids are transformed into liquid. Even such hard substances as bone and leather are completely destroyed in such a septic tank within thirty days, while ordinary animal and vegetable matter is converted into liquid in from three to twelve hours. The countless hordes of bacteria attach themselves to the sides of the tank and to the scum which settles on top. It is essential that the scum on top should not be agitated, and for this reason the several chambers are necessary for perfect septic action. Some have another settling chamber, so that the period of septic action can be increased, but for an ordinary country home the above is sufficient.

When the sewage reaches the automatic siphon it is ready for immediate disposal into sub-soil pipes. Any of the automatic discharge siphons answer the purpose of disposing of the liquids. The siphon is connected at the lower end of the settling chamber, and operates automatically by means of an air pump attachment. When the pressure of the liquid reaches a certain point the discharge takes place.

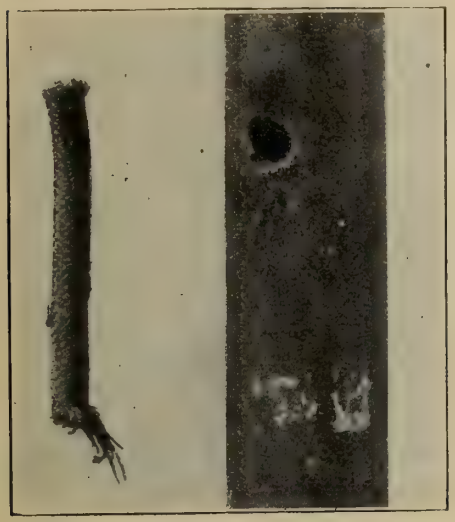
The siphon opens directly into the sub-soil system of pipes. These distributing pipes take the place of filtering beds used in towns and villages. They are located as near the surface as possible, but below the freezing line. There should be one main pipe, connected with smaller radiating pipes, so that the distribution will be made over a wide area. The branch pipes are laid with loose joints, so that the liquid can escape uniformly into the soil. Care should be taken not to lay the pipes with any sharp pitch, or otherwise the distribution will be imperfect. Bacterial action continues in these pipes and also when the liquid passes into the soil. After the liquid has passed through such a septic tank, and thirty feet of sub-soil pipes, and then filtered through two feet of soil, it is pure enough to drink without harm. iThe septic tank is intended to transform the solid contents into liquid, and the sub-soil pipes and soil to purify the latter. A system of this character properly constructed should last for a lifetime, and there is no danger of contaminating the surrounding water supply or of creating foul odors near the house. If anything goes wrong with the tank, either compartment can be cleaned out and repairs made by means of the man-holes.

DISPLAYING PLUMBING FIXTURES

Go into nine out of ten plumbing shops in Canada and the first impression one will gather is that utter neglect is given the subject of proper display of the plumbing and lighting fixtures carried in stock. Too often all that can be seen is a motley collection of enamelware fixtures jumbled together any old way and covered with considerable of last month's dust. In other cases the fixtures are connected up and arranged in a fairly orderly manner, but in the great majority of cases little effort is apparently made to make the shop attractive for ladies or other customers of refined tastes to enter and examine the samples shown. Plumbing supply houses set a good example in trying to show off their goods in an artistic manner, but few expend the time and energy necessary to make their shops business places instead of warerooms or work shops.

G. D. Adams' Beautiful Plumbing Display Room at Parkdale, Toronto.

An exception to the general rule is G. D. Adams, whose display room, shown in the accompanying illustration and located at 1484 Queen street, west, Toronto, is one of the nicest plumbing interiors in Ontario. The arrangement of lighting fixtures and gas globes on one part of the ceiling and on the shelves underneath is effective, especially as the whole ceiling is not given over to this class of goods. The grill work dividing the office from the main display room also tends to make the display more attractive. The large amount of floor space, in addition makes it possible to display a large number of samples without over crowding the floor.



Mr. Adams commenced business 14 years ago, and by perseverence and business application has enlarged his trade year after year, until now he has converted the entire floor space into a display room. This space until last Fall was divided into two sections, one section being used for display while the other was used as a workshop. Now the basement is occupied as a workshop. Mr. Adams also displays in his window a complete bath-room set, including bath with shower attachment, sitz bath, pedestal basin and closet, all finished in white enamel.

LIGHTNING BURST WATER PIPE.

An unusual and significant incident that occurred at the branch office of the Scientific American at Washington, D.C., during a thunderstorm on the 11th of July, 1906. During the progress of the storm, lightning struck the electric wires that supply the office with light and power. The fuse of the various lights and fans were instantly burned out, and simultaneously therewith a torrent of water poured from the floor of the building where the wires entered, evidently flowing from the water pipe supplying the various radiators of the water-heating system, which, as is usual, had not been cut off for the Summer months, since it is not generally considered necessary or even desirable to do so.

Careful inspection disclosed the fact that the electric wiring was close enough to the water circulation pipe to permit electricity of high voltage to jump to the fine ground connection which the water pipe afforded, and in doing so it burned a hole fully three-eights of an inch in the water pipe, with the result above noted. The accompanying illustration shows a sec-

tion of the pipe showing the holes, of which there are two, a large and a small one, and also a piece of the wire. The torrent of water which immediately followed the discharge shows that the larger hole was the result of the discharge. The smaller one may have been produced by a ground during the removal of the pipe, as the water-heating engineer states that a flash occurred as the pipe was unscrewed preparatory to removing it, he having undertaking the work without opening the electric switch.

Hole Burned in a Water Pipe by Lightning.

The lesson which the incident teaches is, first, the value of adequate lightning arresters; and second, the importance of keeping all electric wiring away from water and gas pipes. The electric wires were properly insulated, and carried by porcelain sleeves through the wooden joists of the building, but the lightning's voltage was heavy enough and the ground connection so good as to make the jump possible. If the pipe had been a gas instead of a water pipe, needless to say a fire would have occurred, which would have been difficult to control in daytime, and disastrous at night.

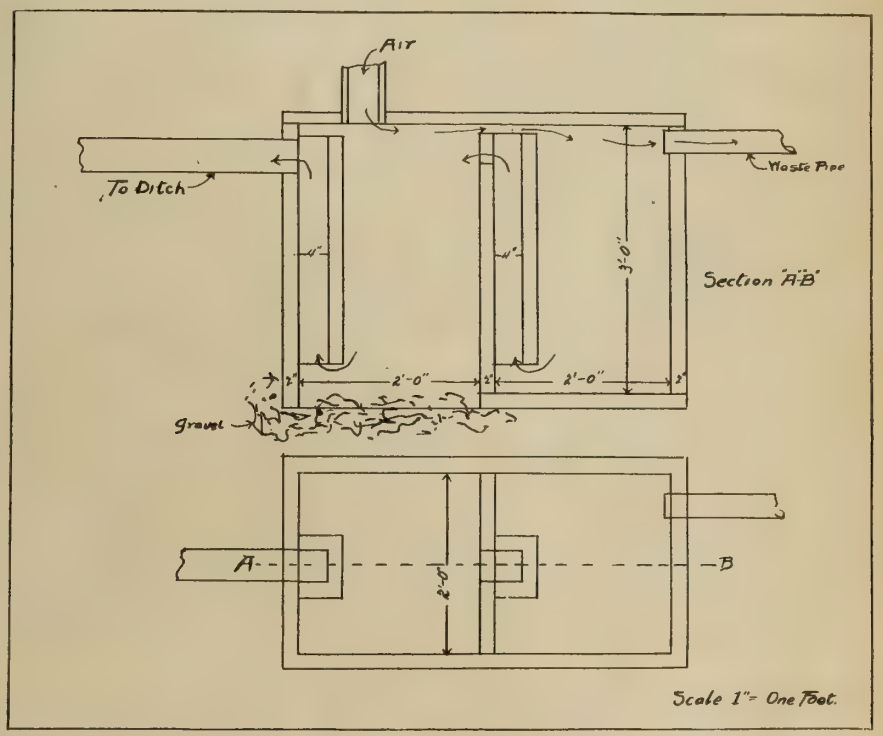
An Arc Burst Store Light.

ARC BURST STORE LIGHT.

According to the claims of the manufacturers, the Benjamin Electric Company, Chicago, and 73 Adelaide street west, Toronto, their new arc burst and wireless clusters are rapidly replacing arc lights for the lighting of stores. The arc light consists of a practical grouping of the highest efficiency meridian type lamps, with wireless clusters made effective by reflectors, so arranged as to radiate perfectly all available light. Each arc burst contains one 50 C. P. lamp in the bottom opening, which, with its accompanying diffusing reflector, increases the cluster value, both as regards appearance and actual distribution of light. The arc burst can be furnished with a "turn-down" feature, by means of which the outer and inner lamps may be operated independent of each other. This has greatly increased its popularity since it admits of two degrees of illumination. If desirable, an extension can be run from the centre socket to a desk light or a fan, to be operated whether the side lights are burning or not.

The clusters consist primarily of an insulating base of porcelain, two one-pipe contact plates attached thereto (each serving like terminals of all lamps in the cluster and each provided with a binding screw) and a removable casing of brass or aluminum supported by porcelain rings or bushings of special design. In doing away with the necessity of wires in the cluster body, by combining the necessary elements of sockets upon one base, the cost of installation is considerably reduced, both for ceiling and pendant forms, and a neat, strong, durable and well insulated cluster results. In the series clusters, the contact plates are made in sections, each section (except the two carrying the binding screws) serving two adjacent lamps, the inner and outer plates overlapping each other, thus connecting lamps in series without wiring. Wireless clusters for indoor lighting are required to be fiber-lined, except the styles having a switch attached, which requires no lining. Clusters for outdoor lighting have aluminum shells and copper threaded socket shells, but require no linings.



WASTE DISPOSAL FOR LAUNDRY TUBS.

It very often happens in rural places where there are no sewers, and the septic tank method of sewage disposal is adopted, that the laundry tubs in the basement are too low to discharge the waste into the septic tank, and in such a case the method illustrated in the accompanying sketch will be found to give good satisfaction.

The lower sketch is a plan view, and shows a tank four feet long and two feet wide, having a partition in the centre, all made of 2-inch plank, and the upper sketch is an elevation of the same through line (A-B).

It will be seen that in the upper sketch the waste pipe from the wash tubs enters the tank at the top, and on the opposite side of the same tank is an overflow, also of 2-inch plank, having an internal space 4 inches square.

As this tank or compartment, unlike the other one, has a bottom, it will fill up to the level of the outlet to the second compartment, and any water passing into the latter must drop to the bottom of the first compartment and pass up through the overflow so that in this way any scum that forms will be retained in the first compartment until it is reduced to liquid or gas by the contained bacteria.

It will be noticed that the second compartment has no bottom but is simply set in gravel or broken rubbish of any kind which will, in ordinary soil, permit the free drainage of same.

If, however, the drainage does not prove sufficient, we have an overflow connected from the top to ditch or other low place where water may pass away, and as in the case of the overflow from the other compartment, this one also takes the water from the bottom of the tank, permitting the almost complete purification of the effluent before it leaves the tank.

Fresh air must be supplied through the air passage at top of second compartment, and is drawn across the top of the whole tank—the partition between the two compartments being left two inches lower than the surrounding walls for the purpose—and through the waste pipe to the roof, there being of course no trap on the waste pipe to prevent the free passage of the air through the same. As in the case of the ordinary septic tank, this one will also be covered entirely with earth.

INSTALLING A HOT WATER HEATING PLANT

By Norman Whitelaw, of the American Radiator Company, Brantford, in "How to Heat the Home."

A hot water heating plant properly installed should be noiseless in operation, quick in circulation and show uniform temperature in all radiators, and heat the rooms in which the radiators are placed to 70 degrees in zero weather, with the temperature of the water at the boiler from 160 to 170 degrees.

A noiseless system involves the use of a boiler having good internal circulation and mains, radiators and valves clean and free of all obstruction.

Quick circulation calls for a boiler having ample waterways and a sensitive fire surface, and a pipe system of proper areas.

Uniform circulation demands a pipe system proportioned as to sizes of mains and distributing branches, so that each radiator will receive its share of the water in circulation without "robbing its neighbor."

Radiators placed on the first floor should be favored by supplying them independently from the main.

The table of tappings and cuts of the radiator connections indicate the manner in which this should be done.

Heating the home with the temperature of the water at 160 degrees in zero weather indicates a well-balanced system with a boiler of ample capacity, and radiators containing sufficient heating surface.

The boiler, radiators, pipe and fittings should be delivered at the building before the work of installing is commenced, except in the case of a new building, where the risers are to be concealed in the walls during construction, when only sufficient pipes and fittings would be necessary to be delivered until the building is ready for the boiler, when the following method may be observed :

First. Find a suitable place for the bench and pipe vise, and then make a temporary bench or shelf close at hand for holding the fittings, which should be all sorted out and placed in rows so that they may be readily found when required. The valves, air valves and ceiling plates should be kept in a box covered up until ready for use.

Second. Locate the boiler and place same on a proper foundation, first having found that it will stand low enough to admit of the mains being taken from the top and with the proper pitch, approximating 1½ inches to each 10 feet of its length, and permit of the last branch being taken from the top of the main below the basement ceiling. Neat hangers should be placed about 10 feet apart to support the mains from timbers overhead.

Third. Place all radiators in position and cut all ways from the top floor to the basement for the risers and radiator connections. This rule applies in new or old buildings when the risers are to be exposed.

Fourth. Following the sketch made of the pipe system, on which is marked the sizes of the mains and branches, start from the boiler, measuring the mains from centre to centre of the fittings, having the tees turn up for the branches as shown in illustration.

Fifth. The flow and return mains in both the double and multiple main systems should run parallel, and the tees for the branches so placed as to admit of same being carried on the same alignment and parallel to each other, as shown, care to be taken that there is a gradual rise on all horizontal mains and laterals, starting from the boiler and ending at each radiator. Do not hesitate to use an extra elbow and close nipple when necessary to change direction to give the proper pitch, or to avoid straining of fittings or radiator connections.

Sixth. When the risers are to be installed before the mains, care should be taken not to have them project too far below the basement ceiling, in order that the branches may be properly connected when the mains are carried high for head room.

Seventh. The expansion tank should be located and placed in position at the same time as the radiators. See article on expansion tank for instructions.

Eighth. After the system is erected and all connections made, each radiator valve should be examined and repacked. The air valves should be attached to the radiators, and should be closed off, preparatory to filling the system.

Ninth. When either or both a hot water thermometer or altitude gauge are to be used they should be attached at this time, due provision being made for connecting them when erecting the mains, unless special tappings in the boiler are provided.

Tenth. Fill the system slowly until the boiler and mains are full, and then examine for leaks. If any are discovered, but not serious, continue to fill the system until the water can be drawn freely from all the air valves on the first floor radiators. Make another examination for leaks, and if any are found repair same, and then fill to the second floor radiators, and continue the same process above suggested until the system is full and shows about one-third in the expansion tank. Then try all of the air valves again, and see that all air is expelled.

Eleventh. Open all radiator valves and start a slow fire, and when finding that the system is tight, carry the temperature of the water to boiling point, or 212 degrees, which should be easily done if all conditions are what they should be.

Twelfth. After a day's test the fire should be let out, and the entire system drained, and all leaks that may have developed, repaired, when the system should be refilled with the fresh water.

Thirteenth. If the plant is installed in an old building, the radiators may at this stage be decorated, a slow fire being kept in the boiler to warm the radiators before applying the color or bronze, in order to get the best results. In new buildings the decoration should not begin until the painting and papering is finished.

Fourteenth. If the boiler or the mains are to be insulated it should be done after all other work is completed. The front of the boiler should also be cleaned off and repainted, and all lettering regilded with bronze.

Fifteenth. Upon completion of the work the owner or his representative should be present to see the boiler under fire, and the system in full operation, in order to receive his acknowledgement that the contract has been fulfilled and is satisfactory ; also to give him instructions as to the proper management of the fire and dampers, and thus make a proper delivery of the heating plant, which will avoid future misunderstandings, etc.

Sixteenth. Before final delivery of the heating plant into the owner's hands, satisfy yourself that everything is completed to the smallest detail.

LARGE ENAMELWARE SHIPMENTS

The vast volume of plumbing business being done throughout the Dominion this season can be best judged by the tremendous activity of Canadian manufacturers of enamelware.

The Standard Ideal Sanitary Co., Port Hope, are working their plant to its fullest capacity, and in spite of the fact that it has been doubled in size, great difficulty is being experienced in keeping the supply houses stocked up with goods to fill the large orders being received from every section of the country. Shipments are being made much more promptly this season than a year ago, however, and few complaints are heard. Enormous shipments are being made to Western Canada direct from the foundry, about 90 per cent. of the western trade being handled by the Standard Ideal Sanitary Co., according to representatives of the company. Two new lines being introduced this season are the new enamel hopper closet for use on boats and a new three section laundry tub. These are not catalogued as yet, but large orders have already been booked for them. Information can be secured regarding these lines from the head office at Port Hope, or from the branches at Montreal, Toronto or Winnipeg.

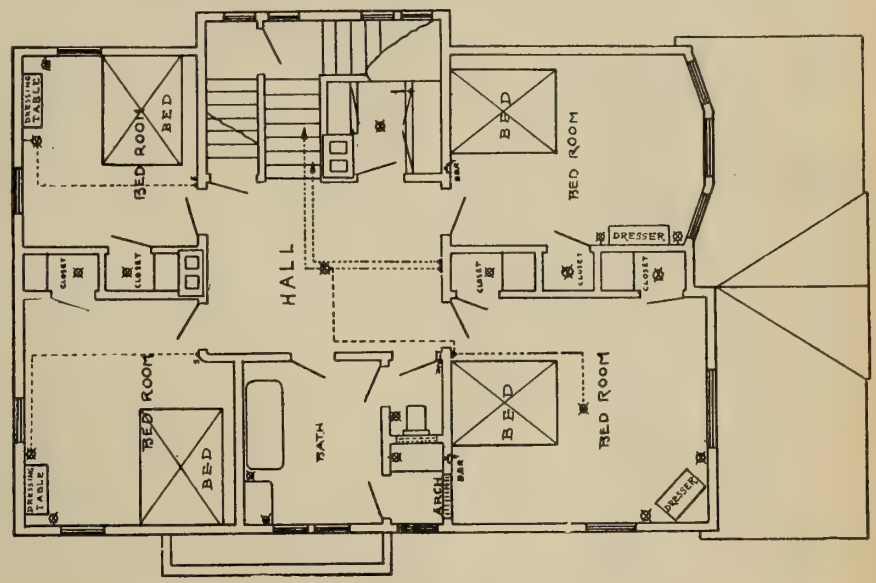
An agency which has shown a remarkable advance during the past year is that of Orlando Vickery, 178 and 180 Victoria street, Toronto. Mr. Vickery was last Fall appointed western selling agent for the Amherst Foundry Company, Amherst, N.S., and he has developed a wonderful trade for the "Beaver" brand enamel baths, lavatories, sinks, etc., as well as for other supplies for plumbers and heating contractors. Carload after carload af Amherst enamelware has been received and rushed out to customers in order to make room for the incoming goods.

Mr. Vickery, who is also representative of the Guelph Stove Company, and the Rund Manufacturing Company, Pittsburg, is to be congratulated upon the rapidity with which he has won a position in the front ranks of the plumbing supply trade.

HOUSEHOLD ILLUMINATION BY ELECTRICITY

Some Practical Suggestions on the Wiring of Residences and the Facilities Given to Consumers for Increased Use of Electricity.

By J. Kermode.



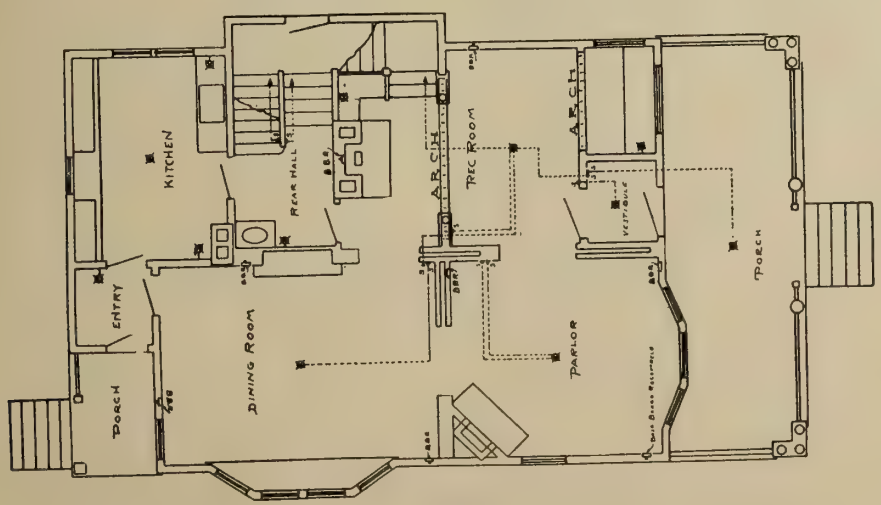
The novelty of electricity in the household for illumination or for other purposes has worn off, and in most cities where there is an electric light company with any degree of enterprise, it has become a usual form of illuminant in competition with gas. This in different cities is so to the degree which the central stations have, by one means or another, advertised to their consumers the advantages of electricity.

It is generally conceded that if the advantages which can be attained by the use of electricity as an illuminant, as a motive power and for general household purposes, can be drawn to the attention of the consumers of the supply company so that they can realize these advantages, electricity in a residence field would become a source of profit.

Outside of presenting these matters to the public through advertising mediums, probably the most advantageous way of introducing electricity for general purposes in homes is by the inauguration of a policy which will supply to the prospective customers properly drawn up plans and specifications for the use of electricity in their residences. The department which, or man who is in charge of this business should be capable not only of figuring the size of wires and laying out the wiring of a new or old residence, but should be capable of suggesting to the consumer the most modern way of artistically and economically lighting his premises and the treatment which will most effectually and pleasingly light each room.

In order that I may make myself more clear in pointing out the work which has to be done by this department, I have prepared a set of plans for a modern medium-sized residence with suggestions as to the best arrangement of the lighting and other utilities, and I would be glad for any discussion which may follow which will add to the artistic arrangement or practical facility which will reduce the cost of these plans.

effects in each room must be studied, that the number of outlets and switches and their location may be decided upon. Before this can be determined in a new house the man drawing the specifications or plans for the wiring must be capable of determining the relative position of the heavier furnishings in each room. When the outlets and switches are located for the entire house it may be found



2nd Floor Plan.

serviceable to write out a specification of lights by tabulating the centres, sides and baseboard outlets, also drop lights and switches, and by keeping a record of classification for several houses and comparing their relative cost for different classes of wiring a fairly close estimate can be made by simply glancing at the tabulation.

A prospective customer usually makes his first inquiry at the office of the supply company and some one should be in a position to promptly inform him what would be most suitable for lighting his residence, with the approximate cost, which must necessarily be fairly correct. To be successful in this capacity the man must be thoroughly versed in the several methods of wiring that are employed, and the kind of appliances that would be best adapted for this purpose, and, in a general way, give information that will assist him. Undoubtedly the relations thereafter between the customer and the supply company will be more satisfactory than if he were to be misinformed by an outside party seeking additional profit for unnecessary or extra work.

With the inauguration of a policy of this kind better workmanship can be secured at a lower cost from competing contractors desiring the opportunity to submit an estimate or proposal on work of this character.

The work should be inspected from time to time as it progresses, and any deviation from the specifications brought to the attention of the owner, with a recommendation of the necessary procedure to rectify the mistake before the work has been completed.

1st Floor Plan.

Costs of Wiring and Operation.

The cost of wiring a house is not so important as the operating expense, therefore the wires and their appliances should be properly installed. Lighting

Suitable Designs for Fixtures.

The design of electric fixtures suitable for most living rooms usually brings the lamp close to the ceiling, and where this style of fixture is used two or more switches should be provided, and the fixture wired in sections to enable one to light part or all the lamps, as desired.

In addition to the centre fixture baseboard receptacles are necessary to make the system flexible. Lighting the room too brilliantly is a mistake too frequently made by users of electricity. Invariably this will be found true where only one switch has been provided on a fixture designed for several lights.

Referring to the diagram for the lower floors, the parlor has a centre fixture controlled by two switches. If the fixture has five lamps, then a combination of one, four and five, or two, three and five lamps can be used, depending upon the wiring of the fixture, by the operation of one or both switches. So-called electrolier switches are not advisable for this purpose.

Ordinarily designing for centre light-

ing is comparatively easy ; placing baseboard receptacles to obtain the best effects becomes more of a problem. The three squares in the parlor represent baseboard receptacles at widely separate points. These will allow the rearrangement of lamps without destroying the results to be obtained. Some of the most beautiful effects and best lighting results have been obtained from oil lamps that have been converted into electric lamps. The illustrations in this paper show a lamp of this kind placed in an archway, the light of which is diffused throughout the two rooms. The shaded light gives a color to the room that cannot be expressed in words or shown by pictures, it must be seen to be appreciated.

Usually the light from a table lamp is sufficient for general illumination, while on special occasions a few or all the lamps may be necessary.

In smaller residences the reception room is generally drawing room, library and living room combined. A centre chandelier in harmony with the style and character of this room will be suitable. As the lamps on this chandelier are more frequently used than any other lamp in the house it is thought best that they be controlled from as many of the most convenient points as possible, and the lamps arranged on two circuits. A good way for switching the reception room lights is shown in the plans, complete control of one lamp is assured from three separate points, viz., vestibule, reception room and upper hall. In this way one light can be turned on or off from any or all of these points ; the fourth switch operates the balance of the lamps on the fixture.

An odd bracket over a cosy corner, a small lamp well shaded directly over the music sheets, an ornamental fixture over the fireplace, or on the newel post, are suggestions suitable for a reception room. The best way of connecting odd brackets and portables is to install receptacles in the baseboard or floors near the point or place where the light will be most effective.

The Dining Room and Kitchen.

In the dining room a dome fixture hung low and over the centre of the table gives very pleasing results. One 16 c.p. lamp under a dome of this kind gives sufficient light for all ordinary occasions, at other times a 32 c.p. frosted lamp or a meridian lamp may be used.

After the dinner hour a soft low light can be readily maintained from a side bracket, or by a candelabra placed on the china cabinet, which can readily be connected to a baseboard receptacle. One switch on the centre outlet of a dining room is usually all that is required, although in larger residences it is sometimes advisable to place two switches, as lamps are sometimes extended from the canopies of fixtures.

The kitchen is a work room, and good light is needed, especially over the sink and range. A side bracket near the sink and another near the range is an excellent way to light it. This will be appreciated by those who have to work in their own shadows.

Drop cords have been the general practice in basement lighting, one of which is controlled by a switch at the head of the stairs. This is good in small basements without partitions, but, as a suggestion, if all the drop lights in the basement were placed on a switch at the head of the stairs and a hylo lamp placed in each socket, then on entering the basement every room would have a low light, enough to see the way to any particular point where more light could readily be produced.

To those who have experienced a second trip to the basement to turn out a light that had been forgotten it does not require any argument other than their own experience to convince them that this arrangement has a value much in excess of its cost.

Location of Lights Upstairs.

As electricity has many more comforts to offer in a home than its lighting features sufficient outlets should be installed at various points in the house, where curling irons, hot water heaters, heating pads, sewing machine motors, and many other devices which are being extensively used can be attached. The economic value of hylo lamps have been well recognized, and their use should be extensively advocated in bedrooms, bathrooms, and halls, where an all-night light can be maintained at a low cost.

The size and arrangement of bedrooms in most modern houses does not permit the rearranging of furniture. For this reason dressers and beds should be located on the plans as near as possible to the place they will permanently occupy. The second floor plans show four bedrooms with the beds and dressers located. On each side of the dresser provision has been made for a side bracket. This is undoubtedly the best method of lighting a bedroom, but where this is not permissible one light over the centre of the dresser has been found to work out satisfactorily. When one centre outlet is used in the bedroom a light placed in close proximity to the ceiling is better than two or three lamps suspended lower. This, of course, requires a switch to operate the lamp. In rooms where side brackets are installed the chain-pull socket has many advantages over the ordinary key socket.

In sick rooms nothing equals electricity. The light may be arranged by or above the bed in such a manner that the patient may turn it off or on at will. Here also the turn down lamp will be found a great convenience, and so, too, will the electric stove used to heat water, and other sick room necessaries in which heat is used. An electric fan may do more for a child than all the doctor's medicines. Hot water bags were a boon to humanity when they were invented; the electric bag has superseded them. None of these devices are expensive and there is not the slightest danger in their use.

Bathrooms are very often poorly lighted. They should be properly lighted. A lamp on each side of the mirror is very helpful to the man who shaves. They are separately controlled and usually one only will be used. Small electric stoves to heat water can readily be attached to the lamp socket and hot water obtained in a very few minutes. Side brackets are advised for bathrooms, lavatories and rear halls.

Clothes closets to be complete should be equipped with drop lights, and when lighted in this manner a chain-pull socket is better adapted than a key socket, as the former can readily be operated with one hand, while with a key socket both hands are commonly required.

Other Electric Advantages.

An electric pressing iron, sewing machine motor, and good light are three factors highly important in the modern sewing room. The electric pressing iron has sounded the note of comfort for the laundress. It can be used in the kitchen or laundry and the work done in three quarters the time taken by other irons and the room in which it is used all day will be just as cool as though no ironing was being done.

A porch light looks hospitable and makes a house look habitable, besides the owner is a benefactor to the traveler in guiding him on his way, especially if the house number is printed on the globe. A wrought iron bracket or fixture suspended from the ceiling with a low candle power lamp will make the porch an ideal spot in which to entertain on a Summer evening.

In presenting the scheme of lighting which I have roughly outlined for this eight-room house, my idea has been to bring out the fact that a moderate sized house may be lighted in the most modern and satisfactory manner, and at an expense for lighting that would compare favorably with any other illuminant. The arranging of the wires, the use of the three or four point switches makes the wiring cost somewhat higher than it could be installed without these switching features and baseboard receptacles. The poor results which are often obtained from electric light and the high cost for current used is very often due to the improper arrangement of lamps and the means of controlling them.

Wiring plans should provide for the attachment of portable devices, as many of these appliances are appreciated by those using them more than the light itself. The working detail of three and four point switches, also the emergency switch have been omitted in this paper.

QUESTIONS AND ANSWERS

Plumbers and steamfitters are requested to send in short questions or lengthy descriptions of problems which have arisen in the course of their work. Answers will be promptly given by experts in the trade. Communications for publication are also solicited regarding any subject which may arise.

DEPTH OF SEPTIC TANKS.

Will you kindly advise me how deep septic tanks may be built for ordinary domestic use, and also if one compartment may be made deeper than the other.

J. A. H.

Septic tanks are usually made from 2 feet 6 inches to 3 feet deep, and the valve or discharge compartment should never be deeper than the last mentioned figure ; if desired, however, for the purpose of saving ground space, the first compartment, or that into which the sewage from the house first flows, may be made from 3 to 5 feet deep, and in such a case the overflow should be carried down to within 10 or 12 inches of the floor of the latter and be properly protected with a large screen.

R. J. Cluff, Toronto, spent a few days in Montreal during the past week making arrangements for the further extension of his growing business.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Aug. 16, 1906.

Business continues first class, and around the trade there is more or less surprise at the existing state of affairs. There is no complaint, however, unless it be that there is too much work for it to be possible to finish everything in contract time. One plumber spoke in just this manner, saying that he would not be able to finish several of his jobs in specified time.

Another advance has occurred in solder. This is the second rise experienced recently. This time the advance amounts to one cent.

This week there is nothing new in iron pipe. Cutting prices has almost ceased, and the trade is in a healthy condition.

RANGE BOILERS—There is nothing new in the market this week. We continue to quote following prices: Iron clad, 30 gal., $5 ; 40 gal., $6.50 net list ; copper, 40 gallon, $22.50 ; 35 gallon, $27 ; 40 gallon, $30.75 net.

LEAD PIPE—Conditions remain unchanged since last week. Diccounts remain : 15 per cent., f.o.b. Montreal, Toronto, St. John, N.B., Halifax ; f.o.b., London, 15c. per hundred lbs. extra ; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—Trade continues about as usual. The market at present is without feature. Discount on all sizes of nipples up to 6 inch, 67 1-2 to 70 per cent.

IRON PIPE— Prices remain unchanged. The amount of business passing continues large for the season, and there is a feeling of satisfaction in the trade as a consequence. We quote : Standard pipe in lots of 100 ft., regular lengths, 1-4 inch, $5.50 ; 3-8 inch, $5.50; 1-2 inch, $8.50 ; 3-4 inch, $11.50 ; 1 inch, $16.50 ; 1 1-4 inches, $22.50; 1 1-2 inches, $27 ; 2 inches, $36.50 ; discounts on black pipe, 1-4 inch, 62 per cent. ; 3-8 inch, 62 per cent. ; 1-2 inch, 71 1-2 per cent. ; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe : 1-4 incn, 47 per cent. ; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent. ; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows : 1-2 inch, $12 ; 3-4 inch, $15 ; 1 inch, $22 ; 1 1-4 inches, $30 ; 1 1-2 inches, $36 ; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS — We have nothing new to report in this market. Dealers report very good business at figures quoted. Prices : Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list ; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—There has been another advance in solder. This week we are quoting prices one cent higher than they were in last report. We quote : Bar solder, half and half, guaranteed, 24c.; No. 2 wiping solder, 21c.

ENAMELWARE — We are still quoting: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65 ; plate E11 and E21, 5 feet, 1st quality, $19.50, special $17.15 ; plate E35, 5 feet, 1st quantity, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25 ; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent. : special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, August 10, 1906.

The holiday this week has interfered slightly with trade, but the demand for finishing materials for plumbing jobs and for heating goods keeps up most satisfactorily. The season has been the best known in the history of the trade locally, despite the dragging in the late Spring. Soil pipe and other roughing in materials are not in such great demand, but the call for enamelware, etc., for more advanced jobs is more than sufficient to make up for the falling off in other lines. The approach of Autumn is invigorating the heating goods trade, and with the completion of many new buildings the demand for boilers, piping, radiators, etc., is very large and steadily on the increase.

Prices remain stationary with no likelihood of any change except in solder, higher prices for which are considered likely.

LEAD PIPE — Quotations continue steady and demand brisk. We quote: Lead pipe, 8c., discount 15 per cent.

SOIL PIPE AND FITTINGS—Quotations continue as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—The demand for pipe for heating systems in new buildings is large, and the movement satisfactory. We quote: Black, 1 in. pipe $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS — We quote as follows : Cast iron elbows, tees, crosses, etc., 67 1-2 per cent.; cast iron plugs and bushings, 67 1-2 per cent.; flange unions, 65 per cent.; nipples, 75 and 5 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 and 10 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 65 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 1-2 per cent.; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallon, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

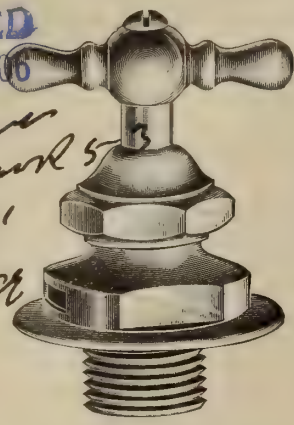
RADIATORS — Large shipments are being made by manufacturers to all parts of Canada to fill orders for the enormous number of new buildings in which heating systems are being installed. We quote: Hot water, 50 and 2 1-2 per cent.; steam, 50 and 5 per cent.; wall radiators, 50 per cent.

SOLDER—Quotations are unchanged, but the market is very firm and an advance is possible. We quote: Bar solder, half-and-half, guaranteed, 24c. to 25c.; wiping, 22c.

ENAMELWARE — Manufacturers are keeping well up in their shipments, although some lines are short. The demand for enamel goods is at its greatest and prices keep very firm. We still quote: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

MONARCH BRASS TO ENLARGE.

As announced in Hardware and Metal of July 28, steps will be taken at once to double the size of the plant of the Monarch Brass Manufacturing Company at Port Colborne. At a meeting held a few days ago the directors of the company ratified the proposition and plans are now under way for the work. The company now employs 40 men and has been very successful in boring gas wells, from which it secures cheap power and fuel.



A NEW IDEA IN WASH TRAY BIBBS.

The United Brass Manufacturing Co., of Cleveland, Ohio, have placed on the market a new idea in wash tray bibbs which ought to prove of general interest to the plumbing trade.

The new bibb is called the Stub Wash Tray Bibb, and as may be seen from the

accompanying cut, is remarkable for its small size and its compactness. While this is perhaps the principal feature of the Stub, there are others of interest. The large square nut on the flange enables the plumber to screw the bibb to an absolutely tight joint without marring the bibb, a feat that is impossible with the old style spouted wash tray bibbs. The Stub delivers its stream

RETURNED
AUG 15 1906
To Amer
Car Book 53
page 41
W&S

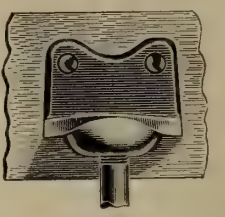
Wash Tray Bib.

down the side of the tray without splashing.

While it is almost impossible to fill a pail from the Stub Wash Tray Bibb, this is an advantage to the house owner at least, for it prevents the destruction of the wash trays by careless servants with gritty bottomed or heavy iron-hooped pails.

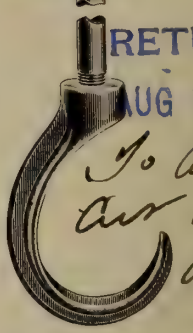
The new Stub is made in four styles. It is made for half-inch iron pipe, male or female thread, and for three-quarter inch pipe with regular or hose gauge thread. Fitted with a thimble it may be used with lead pipe, and fitted with a lock nut and bent coupling the Stub makes a handsome bath cock. It is beautiful in shape and finish and an ornament to any bath tub or wash tray.

The United Brass Manufacturing Co. will be pleased to quote prices on the Stub to the trade.



OIL REGULATED CLOSET VALVES.

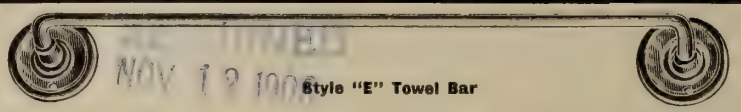
The James Morrison Brass manufacturing Co., Toronto, have on exhibition a sample of the Brooks oil regulated closet flush valve, which requires no tank and is not dependant on water for its operation. It will operate with any pressure, and can be adjusted to give any desired flush. The oil cup is inclosed, and the oil will never need to be replenished. The valve can be furnished with push button seat or lever action, and can be attached to any closet bowl.



For urinals there is an automatic attachment and the manufacturers claim that the Brooks Valve is the only one made that will open and close automatically, at any desired interval. It is operated by the water pressure. The time limit for opening and closing is regulated by oil. The oil is contained in a separate cylinder, and will not need replenishing. The valve will operate under high, low, or varying pressure, without adjustment, and will make a saving of one-half to two-thirds in water.

A NEW PIPE HANGER.

The Mulford Heater Co., of Galva, Ill., have designed an expansion hook pipe hanger, which has been proved to be a very practical one. The style of this hanger can be seen from the accompanying cut. The new joist plate which



RETURNED
AUG 15 1906
To Amer
Car Book 53
page 40
W&S

A New Pipe Hanger.

is made in connection with this hanger is very useful for basements, the ceilings of which are unplastered. It can be easily and quickly fastened to the joist by nailing with two spikes, and is much more secure than if fastened with screws. The manufacturers are selling a

SEPTIC SYSTEM AT BRANTFORD.

Brantford is facing an expenditure of about $30,000 for an improved sewerage system. Two years ago the dumping of the city sewers into the Grand River caused a general protest from the towns and municipalities on the river below. The protest was carried to the Provincial Health Board and the city was then warned that some better provision would have to be made in the future. It is estimated that a septic tank system would cost about twice what Guelph's cost, or, in all, $30,000.

PLUMBING PARAGRAPHS.

The Manufacturers' Natural Gas Company has 400 men at work laying a main from Selkirk to Hamilton. The company has made a contract to supply gas to the Hamilton Steel & Iron Company.

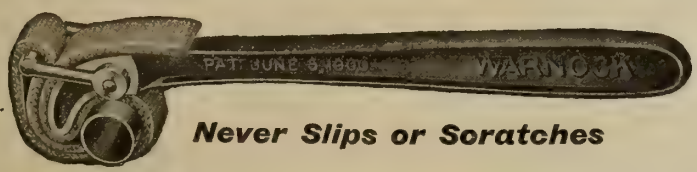
* * *

Jeremie Rheaume, Montreal, has been awarded a Canadian patent on an improvement to heating apparatus.

Winnipeg sheet metal workers have gone on strike for an advance from 36 to 40c. per hour. The strike affects 20 shops and 75 of the 125 sheet metal workers at Winnipeg.

* * *

Two by-laws of considerable importance to the citizens of Gravenhurst, totalling $108,000, were voted on last Friday, and passed with a large majority in each case. One, to spend $48,000 for installing a system of water works, and the other $60,000 for a power plant.



* * *

J. Robinson, clerk of Steelton, a suburb of the Canadian "Soo," is advertising for tenders for the installation of a water works system. Tenders will be received up to August 21.

* * *

Wm. Linton, the Toronto representative of the Star Iron Works Company, Montreal, reports the sales of the "Star" boiler in Toronto to be fully four times as great as during the same season a year ago.

Those Oxford all-metal push-nipple joints— what a selling help they are!

You never heard of a rubber-gasket-jointed boiler that didn't leak sooner or later—usually sooner.

You never heard of a leak in an Oxford Hot Water Boiler. That's due to the ALL-METAL joints, made with the Oxford push-nipple.

Every nipple is smooth-tapered to a perfect driving fit for the smooth-tapered holes,—exactly as our radiator loops are fitted.

That makes a joint absolutely leak-proof and quite indestructible.

It's a joint that not only saves you time in making the installation in the first place ; it's the only joint that you never have to go back to tinker with after you've collected your money.

When you consider that the Oxford Boiler is made so easy for you to sell, and the profit on it is enough to please you,—

Doesn't it seem as if you'd do well to ask for our proposition to really live dealers ?

Jenkins '96 Packing

WE WOULD not say so much about the quality of the Jenkins '96 Packing, were we not so thoroughly convinced of its merits. The color of Jenkins '96 Packing is black, but it is a mistake to suppose that all black packings are alike. Jenkins '96 Packing stands in a class by itself, as it will make perfect joint instantly without having to be "followed up." Simply place the Jenkins '96 Packing in the joint, screw up the bolts tightly when cold, and turn on the steam. You will find the joint to be absolutely tight. Furthermore, we know—as it has been proved by actual use in thousands of steam plants—that as regards durability the Jenkins '96 Packing is unequalled. It will not disintegrate, rot, burn or blow out.

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

LOTS OF REASONS WHY YOU SHOULD,
NONE WHY YOU SHOULDN'T

There's no use talking. You should order

METALLIC ASH-SIFTERS

Calls for sifters of "some kind" are always in evidence.
You'll find that the "best kind" sell when the price is right.
The "Metallic" is the right-price, right-quality sifter.

AN ORDER IS ALWAYS IN ORDER

C. M. CUTTS & CO.

SOLE MAKERS TORONTO JCT., ONT.

MIGHT and RIGHT

Want ads appearing between the covers of

Hardware and Metal

are read by the RIGHT people and ACTED on.

Want to sell. Want to buy. It makes no difference which. An expenditure of 25 or 50 cents in **Hardware and Metal** want columns will produce the desired result.

Rates 2c. per word, first insertion.
" 1c. " each subsequent insertion.

STAY-ON
Horse Blankets

"Imperial Crown" Brand

The difficulty with most Horse Blankets is that no matter how you attach them to the horse, they will work off In the special make of our **STAY-ON BLANKETS** this difficulty is overcome. We have spent labor and money to perfect all kinds of horse clothing, and we are pleased to demonstrate to all the advantages derived from the use of our specialties. You pay no more for our goods than you do for inferior qualities.

It Makes Money for You
Yes, Good, Every-Day Money

Apple-Parers are in great demand just now and will be in demand for some time.

The dealer who is really in earnest about his profits will not take long to decide where his orders should go after reading the following facts :

1. **The Hudson Pattern Apple-Parer** is the only apple-parer made in Canada.
2. It is the best model in the world.
3. It has all the latest improvements.
4. It works without friction.
5. It is **guaranteed.**

We can tell you any more that you want to know about these Apple-Parers and undoubtedly your Jobber can supply you.

DOUBLE YOUR PROFIT

ON HORSE BLANKETS

BY BUYING

GOOD GOODS AT GOOD PRICES, IN GOOD TIME

Our stock of Horse Blankets is as large, if not larger, than that carried by any Jobbing House in Canada. (That means we can afford to sell at reasonable prices.)

Includes all qualities, to suit all classes.

We don't recommend low-priced blankets, but are forced to keep them by some of our customers.

Low-priced Blankets cost more in the end.

A farmer buys a cheap blanket, puts it on his horse at night, and in the morning finds it hanging round the horses neck, a fit specimen for the rag bag (economy ? ? ?) whereas if he'd bought one of our **"Stay-on" Blankets** he would have found it as he left it the night before—strapped closely to the horse, and looking as good as ever. It would have cost him a little more, to be sure, but the difference in lasting quality, is worth ten times the difference in price. Ask our travellers, or write us about

"Stay-on" Horse Blankets, the blanket the horse is proud of.

DENNIS WIRE & IRON WORKS CO., LIMITED

London, Ont.

Here are some reasons why a *Marlin* Model 1897 .22 caliber repeating rifle is the most satisfactory small bore repeater you can possibly own.

In finish, workmanship and balance this rifle is unsurpassed. The *Marlin* quality of steel drop-forgings constitutes all the working parts. Every single piece and screw and pin in this gun is made with care to a standard pattern so that all parts are positively interchangeable. The barrel of excellent steel is carefully bored and the deep rifling gives absolute accuracy and great wearing quality. This and other *Marlin* rifles are the only repeating rifles to which telescopes can be attached because the top of the breech is solid and the empty shell is ejected from the side.

For all sorts of small game this rifle is recommended, and with the long-rifle cartridge it is very deadly to hawks, owls, eagles, geese, ducks and any other shy birds which are hard to approach and require a hard blow to kill.

As a target rifle at long or short ranges, with or without a telescope, the *Marlin* Model 1897 .22 caliber repeating rifle is the guaranteed equal of any in the world.

TO ALL DEALERS HANDLING FIREARMS:

The above is one of seven advertisements to be used by the Marlin Company in their 1906 advertising campaign. These advertisements will be inserted in a list of magazines selected for their QUALITY, known to be bought and read by a class of people financially able to buy Marlin repeaters and having a total guaranteed circulation per month of 5,000,000. Estimating five readers to a magazine, this will give a total, for seven months, of 25,000,000.

In addition, Marlin goods are advertised in farm papers, hardware papers, sporting goods papers and in many miscellaneous publications.

In our advertisements we ask for six cents in postage stamps. This means that a person must furnish paper and envelope, a two-cent stamp for mailing, include six cents and take the time and trouble necessary to write us a letter. Our object is to cut out catalog collectors, young boys and girls and people who are not interested enough to invest ten cents and the time and trouble necessary.

We reason that if a person is interested enough to do this, it is worth our while to go after him seriously and earnestly, and on all inquirers answering these advertisements and spending ten cents on us, we spend more than twenty cents.

We send each and every one a 136-page catalog illustrated with hundreds of engravings, having a beautiful cover in colors and containing a large amount of general information interesting and instructive to all shooters whether they use Marlin repeaters or not.

We send also a copy of our 96-page illustrated testimonial book and a personal letter in which we refer them to the nearest dealer that we know of who carries a good stock of Marlin goods and is enterprising enough to follow up an inquirer and try to sell the man a Marlin repeater.

We also send to the dealer the name and address of the party inquiring, thereby putting the dealer and the consumer in direct communication one with the other. We also follow up the customer and urge him to buy through the dealer.

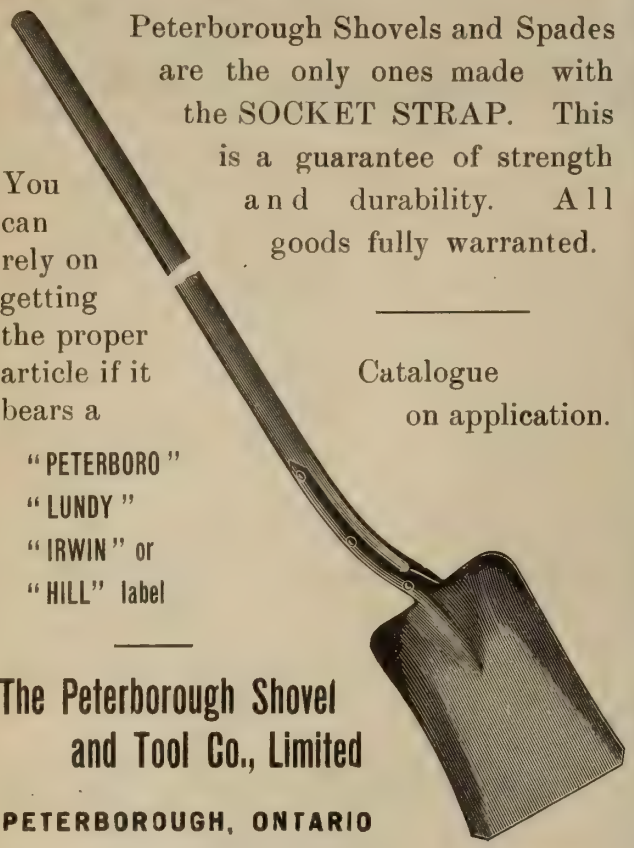
Our advertising campaign each year brings us thousands of inquiries and makes us a great deal of expense and trouble, as you can readily see, but we believe that it pays us and it will pay you if you will take part in it.

If you are interested please write us and give us full particulars as to exactly where you stand on Marlin goods. If you are with us we want to know it and send you some of this business. Write us to-day and tell us whether you want to be on our dealers' or not.

There are many other valuable Marlin ideas included in every Marlin gun. Send six cents in stamps for our handsome catalog, which explains all and contains much other valuable information.

The Marlin Firearms Co., 91 Willow St., New Haven, Ct.

CLASSICAL METAL CEILINGS



are a necessity in every store. They do not cost much to instal. They never cost anything to repair.

Not only are Metal Ceilings fireproof, but they are also Everlasting, Sanitary and Ornamental.

Ventilation Is Important

as a feature of modern buildings.

There are many buildings and residences whose occupants are afflicted with drowsiness and headaches, because the ventilation is imperfect or has been altogether neglected.

THE AEOLIAN VENTILATOR

is unexcelled as a means of producing pure air in large buildings, closet rooms, vaults of churches, schools, factories, stables, etc.

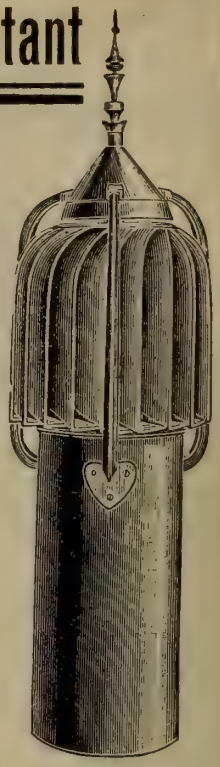
As will be seen from the accompanying illustration, **The Aeolian Ventilator** is very ornamental in appearance, while also possessing exceptional lasting qualities.

We like to talk about the "Aeolian" Will you write us for particulars?

Read this testimonial:

OSHAWA, June 4th, 1903.

Messrs. THE J. W. HARRIS CO., LIMITED, Montreal.



Dear Sirs,—Replying to your favor of May 30th, would say that the "ZEPHYR" Ventilator is giving good satisfaction.

Yours respectfully,
J. E. HAWKINS.

ASBESTOS STOVE LINING

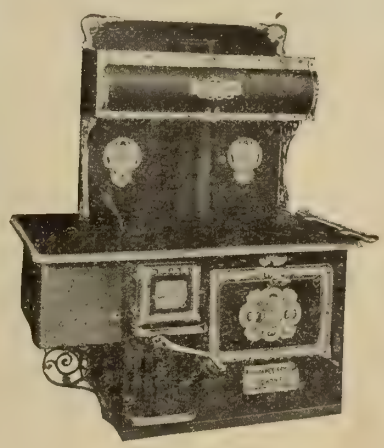
The very thing you need. Having greater durability than fire-brick it is admirable as a fire-mortar for laying the fire-brick in boiler furnaces. Clinkers will not adhere to it.

Used extensively for lining and repairing Cooking and Heating Stoves, Ranges, etc.

Fits any stove, and anyone can apply it in a few minutes. Put up in 6-lb. packages and bulk. Full directions on each package.

We also Manufacture Asbestos Furnace Cement

THE FRANCIS-FROST CO. LIMITED
223 QUEEN ST. EAST
TORONTO, - - - - CANADA



The very way it's built would sell it

but we don't depend on that alone.

All the really worth-while ideas that can be crowded into a steel-plate range are in the Oxford Chancellor. Some of them are peculiar to it among ranges.

The extra-roomy oven, for example, with the asbestos lining that absolutely insures even heat in every part and makes good baking easy.

And the extra-big fire-door, with its patent ash-guard that ends muss, and its inner deflecting draft that sends air down under the fire.

Seven other important differences in this range that could sell itself.

But you aren't asked to let it sell itself. We will give you all the help you can possibly need in selling the Oxford Chancellor.

That makes it easier to get your profit; and the range is built so you get that profit with safety to your reputation.

It would pay you to write and ask us what our new proposition to dealers reads like. It would pay you to do that now.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers' Association of Western Canada:

President—A. J. Falconer, Deloraine.
First Vice-President—J. B Curran, Brandon.
Second Vice-President—W. M. Gordon, Winnipeg.
Secretary-Treasurer—J. E. McRobie, Winnipeg.
Executive—Alberta, A. E. Clements, Olds; C. F. Comer, Calgary; A. R. Auger, Okotoks.
Manitoba—H. S. Price, Boissevain; A. P. Macdonald, Winnipeg; O. Gilmer. Winnipeg.
Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.
Officers Western Board (elected by general merchants and hardwaremen in joint session): President, W. G. McLaren, Souris, Man.; vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; secretary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor, J. A. Lindsay, Winnipeg, Man.
Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association:

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G. Scott, Mount Forest.
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto.
Secretary—Weston Wrigley, 10 Front St. East, Toronto.
Executive Committee—The officers and J. W. Peart, St. Mary's; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.
Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

COMING EVENTS.

Convention of Ontario Retail Hardware and Stove Dealers' Association, in Toronto, on Sept. 4 and 5.

EXECUTIVE MEETING.

A sub-committee of members of the executive committee of the Ontario association are to meet in Stratford next week to prepare a draft of the work for the coming convention. Recommendations will also be made to the convention to be acted upon by the special committee which will be appointed to meet the representatives of the Wholesale Hardware Association.

Members having matters to bring before the executive are urged to forward at once for action at the meeting of Sept. 4.

TORONTO BRANCH MEETING.

A letter has been sent to every hardware and stove dealer in Toronto notifying them of the adjourned meeting to be held next Tuesday evening at Temperance Hall, Bathurst street just south of Queen, east side. In addition to the continued discussion on the sale of goods to consumers by jobbers and manufacturers, the situation existing in the white lead and wire nail markets will be discussed. Recommendations to be presented to the coming provincial convention will also be discussed.

VICE-PRESIDENT HAMBLY RECOVERING.

Members of the Ontario association will be glad to learn that Second Vice-President J. R. Hambly, Barrie, who for some weeks has been suffering from nerve trouble, is again attending to his business and hopes to be able to take part in association work again and be in attendance at the convention on Sept. 4 and 5.

"If the various committees have good reports the bring before the convention it should be a very profitable gathering for the hardware merchants of Ontario," writes Mr. Hambly.

MICHIGAN ASSOCIATION CONVENTION.

James S. Greenhill, of Greenhill & Moffatt, Leamington, has sent a copy of the programme of the twelfth annual convention of the Michigan Retail Hardware Association to the Ontario secretary. Mr. Greenhill attended the convention in Detroit on August 8, 9 and 10 and reports the gathering to have been very instructive and interesting. W. H. Richardson, Essex, another member of the Ontario association, was also a visitor at the Detroit meeting.

The programme comprised eight pages, five of which were devoted to a list of the 626 members enrolled in the association. Some very fine papers were read on the first day by prominent manufacturers, jobbers and retailers. The second day was largely devoted to business and the third to visiting the plants of Detroit manufacturers. The evenings were given up to entertainments, the jobbers and manufacturers uniting with the retailers in having a jolly time.

WESTERN ASSOCIATION TOPICS.

Through an inadvertence Secretary J. E. McRobie was described merely as "treasurer of the western board" in connection with the report of the hardware convention in the issue of the 4th. As the western board has never yet made any assessment there are no funds in the treasury and the genial "Mac" has hitherto been devoting all his time and energies to his duties as secretary of the Western Retail Hardware Association. It is probable that he had almost forgotten his office as treasurer of the western board until he saw himself so described in Hardware and Metal.

It is important that western association members should now make their preparations for handling Fall collections. In towns where there are several hardware stores the owners should hold their meetings without waiting for the call of the general secretary. At these meetings and at meetings of hardware dealers from neighboring towns, arrangements should be made to take advantage of the big crop to collect all outstanding store bills. A year ago many dealers made a concerted attempt to close their books from November 1 to April 1 and their efforts met with a good measure of success. The plan is worth trying again this year.

COMPLAINT AGAINST JOBBERS.

The following interesting letter has been received for publication from a prominent retail hardware dealer in one of the largest towns north of Toronto. The complaint made appears to be one which should be acted upon at the coming convention of the Retail Hardware Association and the plan suggested for remedying the evil deserves the serious consideration of the executive committee of the association. The letter follows:

"In your issue of Hardware and Metal a few weeks ago the writer was favorably impressed with what was said by a subscriber respecting the selling of hardware by wholesale firms direct to consumers. This is certainly one of the grievances our executive committee should deal with. We had an instance in our town whereby one of our hardware dealers had received an order for a piece of wire rope for an elevator, and their happened to come to the town a representative of one of the Toronto wholesale houses. When he was asked respecting the price of wire rope he quoted the wholesale price and secured the order and our local opposition retailer was asked to cancel his order. My idea respecting these firms who are looking for that kind of business and doing a jobbing trade also with the retail trade would be to censure them and by so doing have printed cards, a few to supply each dealer who are members of the Ontario Retail Hardware and Stove Dealers' Association, and when any such circumstances come to their notice let them report it on these cards and they be forwarded to the secretary of the association and brought before the executive and when they have dealt with it, that they forward cards to each member of the association advising them their opinion and also advising them what such firms would do in their locality. Trusting that something may be done at our meeting in September that will bring forward some scheme that will be made use of for the purpose of eliminating such competition."

A Member of the Ontario
Hardware and Stove Dealers Assn.

Aug. 7, 1906.

SECURE ACCOMMODATION EARLY.

"I expect to be present at the convention on Sept. 4," writes L. Wale, Stevensville, one of the new members recently enrolled into the Ontario association.

Arrangements for the convention are completed and will be announced next week. Indications are that the attendance will be over the hundred mark and as hotel accommodation will be hard to secure, intending visitors should engage their rooms in advance if possible.

FORMATION OF DISTRICT CLUBS.

M. C. Hale, Tulsa, Oklahoma, made an address on the "Formation of District Clubs," at the recent association convention in his State, speaking as follows:

The organization of hardware clubs is, in my opinion, the most important subject that can be taken up and discussed by the hardware dealers here assembled.

In the days and weeks we spend behind the counter trying to make a living selling hardware, the thought often comes to us, How can be better our conditions? Competition is getting keener all the time, and profits are naturally becoming less It is the natural ambition of each one of us to sell more goods than our competitors, and the usual method is to make special inducements to this and that customer, with the result that the large buyers have no difficulty in buying goods at a very close margin.

The trouble with the merchants in most towns is that they are jealous of each other and a lack of confidence in each other prevails. It is no uncommon thing to find towns where the merchants will not even buy goods from the same jobber for fear that if they get to handling the same brand of goods the prices will be demoralized. I have in mind towns where business is such that, if the cost of doing business were added to the cost of the goods, the entire builders' hardware business would show a loss. There is only one solution of this growing evil, and that is the organization of the hardware dealers in each town.

Call a meeting of all the hardware dealers in your town, elect your officers, draw up a set of by-laws, appoint your committees, meet once or twice a month as the circumstances demand, have some cigars, and make it a social event.

It is a good plan once in a while to have a supper all by yourselves, and you will be surprised at the feeling of confidence and friendship that will spring up between you, for there is no reason why your competitor should not be one of your best friends. At these meetings establish prices on staple hardware, such as nails, wire, poultry netting, wire cloth, builders' hardware, and any carpenter's tools on which you may have strong competition. This list should be made, of course, to suit your own particular needs.

I would suggest that all goods on which prices have been established should be marked in such a way, for instance, a cross, so as to indicate to the clerks that the price found on all goods with this particular mark should not be cut. Some of you will probably say that you have a competitor who might agree to sustain prices, but he never would do so; and why won't he do so? Because he thinks the same of you. You haven't any confidence in each other's sustaining prices. This can only be remedied by frequent meetings where you can thresh out your troubles among yourselves, and it won't be long before you will have more confidence in each other's sustaining prices.

We experienced the same trouble in Tulsa before we organized. There was not a week passed that I did not hear of prices being cut by our competitors, and I usually met the prices, and sometimes would go them one better. We never thought of such a thing as consulting each other about these cut prices; we felt too independent to do anything like that—and consequently the retail prices were becoming more demoralized every day. One day I broke the ice and called them all together. We spent a pleasant evening, and before we separated we decided that we were all a pretty good bunch of fellows. We elected our officers, drew up a set of by-laws, and appointed the necessary committees. We then continued with our business with a different feeling in our hearts toward each other, and now if a customer comes in and tells me I am 25 cents higher on barbed wire I know he lies. There will be an immense amount of business during the next few years, and why throw away the profits in senseless price-cutting?

Another phase of the hardware business which can be greatly helped by organization is the credit business. The average deadbeat after wearing out his credit at one store will commence trading at another store, and so on until he is in debt to them all.

After our organization was completed we compared notes and found that in a number of cases we all had the same bad accounts on our books. Now, if we are in doubt concerning any account on our books, we discuss the matter at our meetings and thereby inform and protect each other in regard to the same.

We are living in a period of great organization and combination in both capital and labor. The manufacturers have discovered that it is much more profitable to get together and agree on prices and work harmoniously together than to try to drive one another out of business. The laboring men have organized themselves together in their unions, in order to sustain the price of labor. Why should not the retail hardware merchants get together and work in harmony with each other? There is room for all of us and the old system of trying to drive a competitor out of business is not a profitable way of doing business.

FURNACE SALESMANSHIP.

At the recent convention of the Iowa Retail Hardware Association, J. F. Doty, of West Liberty, spoke about furnaces in a very interesting way, saying among other things:

I have been assigned the task of giving a demonstration of how I would eat up a prospective furnace buyer and get away with his money and my reputation. The first act is to get the customer's confidence and get his mind into a receptive mood. Find out the dimensions and kind of building to be heated, who your competitors are, make of furnace or furnaces in the field against you. Avoid mentioning the names of any other furnaces or competitors, talk your own furnace, keeping in mind, of course, the other fellow and the strong and weak points of his furnace, and make your points stronger. If you know the points that your competitor makes on his furnace, dwell on these points and show the competitive features on your furnace to be more desirable. Study your subject and be able to make strong defence of a weak point as against a strong point in your competitor's furnace.

Your furnace may not embrace all of the desirable points, therefore you must be able to advance a strong argument on your good points which will more than offset some desirable features that your competitor's furnace may have. Avoid going so deep into theory and cause and effect that your customer cannot follow you. If you believe that your explanation is not fully understood, go back to him and make your illustration plainer and explain to him the meaning of the thought expressed. Keep your man with you; do not let him lead you into argument. Dwell on the fact that your furnace is of a superior make and that the manufacturer stands behind you in every guarantee, also that you have been in the furnace business for a number of years and that your furnaces are all giving perfect satisfaction and that you are always glad to correct any error and make good every guarantee. Tell him your workmen take particular interest in your business and pay strict attention to installing your furnace properly.

Impress emphatically upon your customer the fact that your knowledge of ventilation and circulation is thorough, and that you give ample time to your men to have the work done well, and that you superintend the work, or that you inspect it, and would not allow any workman to slight his work; also that you reserve the right to lay out the job and install the furnace along scientific lines. Try to impress your customer with the fact that if he buys a cheap furnace he gets what he pays for and that a good furnace, properly installed, will in a short time pay for the difference in fuel saving. In your conversation carry the idea that the customer came to buy a furnace there and then and that he is buying and that your explanation and assurance is being woven in as a part of the contract.

Put your proposition in the shape of a contract and have everything understood and written down to guard against misunderstanding after furnace is installed and pay day comes. Give him to understand that you buy your furnaces and pay for them in order to get a cash discount which enables you to sell him a good furnace at as low a price as a good job can possibly be done.

IN DEFENCE OF THE SMALL MAN

Against the policy on the part of manufacturers of trading to the large buyer and despising the individual merchant of less means, "R. S." writes in an English exchange as follows: "It will be an evil day for the trade of this country when the small man is crowded out of existence. I have no desire to run contrary to the spirit of the times; still I cannot but think that it is against all good public policy that the small man should be eliminated and his place taken by the corporation, which has neither a body to be kicked nor a soul to be saved. The independent trader, or, in other words, the small man, is the bone and sinew of the country, and the chief upholder of our trade. It is a thousand pities that his sturdy spirit of independence and self-reliance should be annihilated, and that we should become a nation of servants and mere wage-earners for the benefit of a very few multiple shop-owners. We would thus create a few plutocrats whom the rest of the nation would serve, and this would be disastrous to our oldest and best traditions

Large Buyers Catered to.

"The tendency in every direction is against the independent trader. The alleged protection societies contemptuously report of him, 'This is a small man of very limited means, not good enough for credit.' The wholesale houses instruct their representatives not to waste their time calling upon the small man, but to concentrate their energies upon the large buyers. The outcome of all this will be that the small man must go under, and his place will be taken by the huge monopolists. Manufacturers and wholesale houses will also be in the hands of the multiple shop-owners, who are the hardest of taskmasters.

"Proof of this statement is to be found in the recent crisis in the leather trade. It will be remembered that leather commenced to advance in value some two years ago, and owing to a variety of causes which need not be enumerated, the raw material has continued scarce and dear up to the present moment. When the advance first set in the boot manufacturers did not increase their prices, as it was thought that the advance was only temporary, and that values would soon settle down to their normal level. The time came when the manufacturers could not produce at their old rates, even after they had taken everything possible out of material and labor. Then they asked their customers to pay a little more. The despised small man was willing enough to do this, but when it came to the multiple shop-owner it was another matter. The heads of these establishbents absolutely refused to pay an increase even when the cost of material had advanced 25 per cent. One of them, when asked for an advance, cynically replied that he couldn't pay it as it would compel him to alter his whole range of window tickets, and he did not care to go to that expense. The manufacturers lost money, and more than one old and reputable firm was compelled to suspend payment, whilst a number of small failures was considerably above the average The action of the multiple shop-owners brought many other manufacturers to the verge of ruin.

Small Men Get Short End.

"What has happened to the boot manufacturers may also befall the wholesale and distributing houses in our trades, that is, if we permit the multiple shop to have it all its own way. The wholesale houses are inclined to support the big man through thick and thin, and to let the small man go to the wall. This is a fatal policy. All the best lots and best bargains are first submitted to the big buyer, who is also given the heaviest discount, and altogether placed upon the most favored terms. On the other hand, the small man is considered fair game. He is charged the highest prices, and given the shortest terms. There is no reason why this plan should be so universally adopted; on the contrary, all good trading is against it. The big buyer becomes insolent and dictatorial, and squeezes the merchant and manufacturer alike. The remedy lies in the hands of the latter, and it consists in ungrudging and generous support of the small man.

"The multiple shop has become an enormous power in trade, and its directors and managers are tempted to wield that power unmercifully. There are many large concerns which are so much run after and waited upon by the representatives of the wholesale houses that they think there must be 25s. in their sovereign, and they act accordingly. Who has not heard this or that traveler boast that he has just booked an opening order from this or that large house? Travelers are invariably booking orders of this description at remarkably low-cut prices, sometimes at prices which actually show a loss or at the best an inadequate margin of profit.

"The wholesalers accept the low-cut lines just to open, and the traveler assures them that they will get their own back on the next transaction. The next transaction never comes off. The big buyer knows the game just as well as the traveler, and he has no intention of permitting the bagman to 'get in at him' next time. He takes good care of that. There is an unlimited supply of people trying to open with him, and to offer tempting lines with that praiseworthy object in view. Having bought so well he can afford to sell low, and thus drive another nail into the coffin of his small opponents, who find that their huge rival is able to mark certain lines in his window at a less price than they can buy wholesale.

"Some travelers are so short-signted that they think it a cunning thing to get big prices from their small customers, and openly boast of their prowess in this respect. This is the old story of killing the goose with the golden eggs. It is far better for everyone concerned, individually and collectively, that there should be 30 small tradesmen in a town or district than a single large concern. The big houses are never tired of boasting that they can buy well, and there is no doubt that this boast is justified of facts. But the good bargains they procure must be at the cost of someone, and that someone is usually a manufacturer or wholesale house. It is foolish, then, to sneer at the small man, and to describe him as a tin-pot or tupence-ha'penny individual whose business is not worth looking after This is a great mistake, my masters, and unless the error is corrected at once we are all certain to suffer for it. When we have eliminated the small man ,and turned him into a timeserving employe currying for favor with a man at the top, we shall have killed off the characteristic virtues of the race, not the least of which are independence and initiative."

The business men in a Minnesota town hold a "Market Day" on the first Saturday of each month. Prizes were offered in June for the best lot of Spring chickens (more than six), best veal calf and Spring calf, best lots of vegetables, biggest load of oats and biggest lot of eggs. Special bargains were features at the different stores represented. The local band furnished music during the day, and in the afternoon there was a ball game. Two novel features were an exhibit room where the farmers could display their produce and an auction, conducted by a skillful auctioneer, only one per cent. being charged for his services. Special attention was called to the high prices paid for wheat, compared with prices paid at other points.

QUALITIES OF GOOD SALESMANSHIP

Salesmanship is a great thing. I've been studying it a little on the side lately. You see, since I've been the advertising man of this store I don't do much in the way of selling goods myself, but I keep my eye out for anything along the salesmanship line because I'm looking out for all kinds of ways to brace up the business.

The boss' nephew says I'm getting the swelled head since I'm the "ad man," and maybe I am, but I seem to be making good right along and that's more than he is doing, so I don't worry much over the size of my head.

After watching the fellows in the store for a while I've about come to the conclusion that nine men in ten can get to be good salesmen if they go at it to learn just as they'd try to learn to be good artists or good singers. There's a good deal to learn before you can step in behind the counter and sell a man something that he isn't suited with at first sight, and it isn't to be picked up in a minute, and a salesman needs systematic education.

Some men say that it isn't worth while to take all the pains of learning to be a professional salesman when they don't intend to stay behind the counter all their lives. They say that a man can't afford to work too hard at something that will never pay him more than a clerk's wages.

Unlikely Candidates for Promotion.

Of course that's all right if he is satisfied to remain a clerk all his days, but it always struck me that the chap who is afraid of doing his work too well isn't exactly the most likely candidate for promotion. I didn't get my promotion by being afraid I'd spend more time learning about my job than I was getting paid for.

The fellow who wants to be his own boss sometime won't be a very good one if he doesn't know anything about what his men ought to be doing and how they ought to be doing it. Most every man who has made a mark on the top rung of the ladder has begun by making a good deep mark on the bottom rung first.

I believe that some fellows have the knack of just telling what sort of a customer they have as soon as they hear the man or woman ask for what they want. That's reading human nature, I suppose. I never was very good at it naturally and all I learned along that line came by just studying the people I met every minute.

I found that I learned to judge a customer about as well as any one and I could handle them to the advantage of the house where I had been losing them altogether before. And I found out one thing, you don't want to load every customer up with all the goods he'll buy. When I first began, I had the idea that the crack salesman was the man who could sell a customer the most goods — just pile on all that he could possibly be made to take away and pay for.

I worked on that basis for a while until I saw a few cases where men I'd loaded up with too much of something that wouldn't keep forever, sort o' went back on the store. Then I tumbled to the great principle of salesmanship. You may know more about this thing than I do. If you do, you know that the man who is the best salesman is the man who makes the most and the best satisfied customers. Real salesmanship is making satisfied customers and that's the secret of the whole thing, if it is a secret at all.

A Salesman's Greatest Virtue.

You can't make a satisfied customer by selling a person what that person doesn't want, or what won't give that person satisfaction when it is taken home.

The kind of a salesman to be is the kind that people come back and ask for. When a man gets to pleasing the people he waits on so well that they want to do business with him again, then he has made himself worth something to the store and he is getting in line for a raise.

The greatest virtue in a salesman is honesty. It pays to be honest and it pays in real money. There's nothing to be made in any kind of chicanery. I've tried it and I know. I've tried to make people think that Brazilian turp was pure turpentine and had 'em go away believing it and I've had 'em come back knowing that I fooled 'em. It doesn't pay, and it's mighty unpleasant when you get caught trying.

Folks aren't as anxious to trade with a chap who is smooth and smiling as they are to buy from the fellow who tells them things just as they are and who does it every time and gets the reputation for doing it.

A man can't fool a customer once without taking chances of ruining his reputation for a long while with that one customer any way. It takes just about two minutes to fool a man and it takes sometimes two years to get back to where you stood with him before you fooled him.

Don't Pay to Fool Customers.

You can't get around the fact that honesty is the mental and moral foundation of good salesmanship. No man ever yet got a lot of customers going regularly to a store unless he treated them right every time he did business with them. People know when they are robbed or fooled, and they don't always come around and kick about it either. As a matter of fact probably about as many just say nothing and don't come back to really make a kick.

The man who comes back and complains gives you a chance to square yourself with him, but the fellow who just makes up his mind that you are crooked and lets it go at that, keeping away from you and advising his friends to do the same, does you a lot of harm that you probably deserve — unless you didn't deceive him on purpose.

There's a good deal more to being honest than just not taking things that don't belong to you. Any man can be honest in the eyes of the law, just seeing that he doesn't do anything that he could be arrested for, and yet cheat people right and left. If you don't want to be honest because it's the right thing to do and because you know that you haven't any business being anything else, then you won't be honest enough to hurt you any. When I go out to buy things myself, I don't want to go up against the fellow who's only just as honest as he has to be.

This isn't any preachment. It's just straight business talk, and any young clerk who thinks that there is money in the "slick" school of salesmanship has my permission to experiment if he wants to, but if I were looking for a clerk I wouldn't hire him if he were the last man in the line.

Salesmanship may be made up of other things than honesty, and it certainly is, but they don't cut much of a figure if the honesty part is left out.

A PRACTICAL SUGGESTION.

If you find time hanging heavily on your hands sit down and write to all the catalogue houses for their catalogues, suggests an exchange. Don't use your own stationery, however, as they may not want to favor a competitor with a price list. When you get the books go to work and compare the prices with yours, adding freight, postage, etc. Then use some of the results in your advertising. Give the particulars. Don't deal in generalities. Give the name of the mail order house, the page the article is listed and your price and theirs. Call attention to a few staple artieles every week and see if it does not help your trade. Don't make any misrepresentations. If the catalogue house can fairly beat you on an article acknowledge it or else cut your price. Do not substitute something cheaper nor simply surmise that the article offered by the mail order house is "no good." These concerns are not all robbers, by any means. Some of them are as honest in their advertising as you could want them to be. You cannot make any headway against them by calling them "thieves" and "robbers" and "cutters."

Why not sell a few more washing machines before the Fall trade begins? You probably have more time now to devote to this line than you will have a month later. Do some advertising—write personal letters to as many customers as you can and in other ways try to get them interested in the machines.

LIGHTNING USE OF FIGURES

J. Malcolm Stewart, in Chicago Tribune.

The number 10 forms a convenient base from which all numbers having a value of over 9 and under 11 can be figured readily. First multiply by 10, and then by making the necessary fractional addition or subtraction arrive at the desired result, thus :

EXAMPLE NO. 1.

What would 156 yards of gingham cost at 9½ cents per yard ? Answer : $14.82.

Process—At 10 cents per yard it would cost $15.60, and at 9½ cents 78 cents less, or $14.82.

EXAMPLE NO. 2.

What would 244 dozen eggs cost at 10¾ cents per dozen ? Answer : $26.23.

Process—At 10 cents per dozen they would cost $24.40, and by adding to that sum $1.83, the cost at ¾ of a cent, you at once obtain the correct result.

A little practice along the above lines should enable the student to perform any example like the foregoing instantly and mentally.

EXAMPLES FOR PRACTICE.

1. Multiply 148 by 9¼. Answer : (1,480—111), 1,369.
2. Multiply 164 by 10¼. Answer : (1,640 plus 41), 1,681.
3. Multiply 268 by 9½. Answer : (2,680—134), 2,546.
4. Multiply 442½ by 10½. Answer : (4,425 plus 221), 4,646.

Adding or Subtracting a Pitfall.

The main thing to be observed in working examples under the above rule is whether the fractional sum is to be added or deducted. With proper care exercised in this direction no mistakes ever should be made.

To multiply any two figures by 11 : Add the figures to be multiplied together and write their sum between them.

EXAMPLE NO. 3.

What would 63 pounds of rice cost at 11 cents per pound ? Answer : $6.93.

Process—The sum of the two figures composing the multiplicand is 9, which figure, written between the other two, gives the correct answer.

Note—When the sum of the two figures amounts to more than 9, add the overplus to the left hand figure, thus : 87 by 11 equals 957 ; having 1 to carry makes the left hand figure 9 instead of 8.

When three figures are to be multiplied : Consider the two left hand figures together, thus : 187 by 11 equals 2,057 ; 18 and 7 are 25, the 5 making the tens figure in the answer while the 2 added to the 18 makes it read 20.

When multiplying yards or pounds by 12½ cents, the besy way to treat them is to consider the quantity as so many dollars and take ⅛ of them for your answer, thus :

EXAMPLE NO. 4.

What would 486 pounds cheese cost at 12½ cents per pound ? Answer : $60.75.

Process—Either take ⅛ of $486.00, or better still, take ⅛ of $480.00, which is evenly divisible, and then add 75 cents for the odd 6 pounds.

Often you can figure by 13½ to advantage, by first getting the result at 12½ and adding as many cents to your answer as there are yards or pounds in the multiplicand, thus :

EXAMPLE NO. 5.

What would 320 pounds butter cost at 13½ cents per pound ? Answer : $43.20.

You can see readily that at 12½ cents per pound the above quantity of butter would cost $40. By simply adding the cost at 1 cent to your first product you at once obtain the desired result. This rule is worth practicing, and you can use it also in figuring by 11½, in the latter case deducting instead of adding.

EXAMPLES FOR PRACTICE.

1. What would 56 yards dress goods cost at 13½ cents per yard ? Answer, $7.56.
2. What would 168 dozen eggs cost at 11½ cents per dozen ? Answer, $19.32.
3. What would 364 pounds soap cost at 13½ cents per pound ? Answer, $49.14.
4. What would 248 cans peaches cost at 11½ cents per can ? Answer, $28.52.

Fifteen Simplifies the Process.

Fifteen is one and one-half times ten, and can easily be figured by in that way.

EXAMPLE NO. 6.

What would 364 yards cloth cost at 15 cents per yard ? Answer, $54.60.

Process—Add to $36.40 one-half of itself, or $18.20, and you have the complete answer ; or, better still, figure what 360 yards would come to by adding together $36 and $18, afterwards annexing 60 cents for the 4 odd yards.

The advantages of performing operations in the latter way are many. For instance, you soon learn by heart that 360 at 15 cents comes to $54, and adding on the extra cents for the odd yards is easily accomplished. When you learn these things you can just glance at any example like the one we are discussing and say instantly $54.60.

EXAMPLES FOR PRACTICE.

1. What cost 165 yards cloth at 15 cents per yard ? Answer, $24.75.
2. What cost 88 pounds butter at 15 cents per pound ? Answer, $13.20.
3. What cost 264¾ dozen eggs at 15 cents per dozen ? Answer, $39.71.

Do the last example in this way : 260 dozen would cost $39, and 4 dozen 60 cents, and ¾ dozen 11 cents.

Another price commonly met with in business is 17½ cents. You can many times get your result when multiplying by it by first multiplying by 10 and then by 7½, adding the two products together, thus :

EXAMPLE NO. 7.

What cost 44 yards cloth at 17½ cents per yard ? Answer, $7.70.

You should, by using the rule we gave in a former lesson for figuring by 7½, be able to do the above at a glance, just saying 4.40 and 3.30. This ought to be sufficient instruction in handling this number to those who have learned to multiply by 7½.

Easy to Figure by 25.

The next number to be considered is 25, an easy one to figure by, the same rules applying to it that apply to 12½. It also bears certain relations to two other numbers frequently met with in business, 22½ being 10 per cent. less, and 27½ being 10 per cent. greater than it. You will often find it handy to figure by the last two numbers, thus :

EXAMPLES FOR PRACTICE.

1. What cost 64 dozen eggs at 27½ cents per dozen ? Answer, $17.60.
2. What cost 32 bushels oats at 27½ cents per bushel ? Answer, $8.80.
3. What cost 56 yards cloth at 22½ cents per yard ? Answer, $12.60.
4. What cost 144½ bushels corn at 27½ cents per bushel ? Answer, $39.74.

In the last example figure 140 bushels first, then add the 4½ bushels, thus : $35 plus $3.50 plus $1.24.

The next number is 37½. This is best considered as one-half of 75, thus :

EXAMPLE NO. 8.

What cost 48 yards cloth at 37½ cents per yard ? Answer, $18.00.

Process—¾ of $48.00 (what it would come to at 75 cents), is $36.00, and half of that is $18.00.

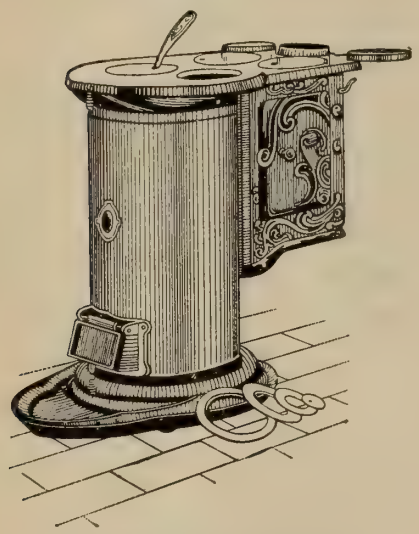
EXAMPLES FOR PRACTICE.

1. What cost 164 pounds butter at 37½ cents per pound ? Answer, $61.50.
2. What cost 84 yards dress goods at 37½ cents per yard ? Answer, $31.50.
3. What cost 92 bushels potatoes at 37½ cents per bushel ? Answer, $34.50.
4. What cost 142½ yards cloth at 37½ cents per yard ? Answer, $53.44.

In the last example take ½ of ¾ of $140 and add 94 cents for the 2½ yards.

TO PROVE ANY SUM IN DIVISION.
EXAMPLE NO. 11.

$$21)485(23$$
$$\underline{483}$$
$$2$$



Reduce the figures in the divisor and quotient to single figures. Multiply them together and, having again reduced them to a single figure, add the remainder. The final result should equal the sum of the dividend reduced, by addition, to a single figure.

A Kentucky merchant, a woman by the way, is getting a large part of the farmers' trade by sending out two wagons loaded with goods most in demand, all through the section tributary to her town.

STOVES AND TINWARE

"PERFECTION TORTOISE" STOVES

The James Smart Manufacturing Co., of Brockville, have brought out this year the "Perfection Tortoise" cooking stove, cut of which is here shown. It is a combination cooking and heating stove, using either hard coal or wood, and is built with a view to getting the maximum heat with the minimum quantity of fuel. It is 33 inches high, 16 inches in diameter, has four 8-inch holes, and an oven 16 x 10 x 12 1-2. The James Smart Co. report that the stove is being very favorably received by the trade. They will be

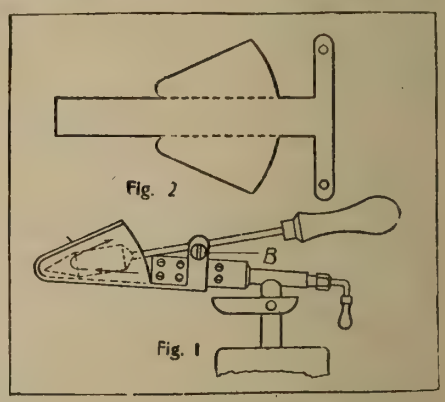
"Perfection Tortoise" Stove.

glad to furnish further information relative to the stove to those who are not yet familiar with it.

MAIL ORDER COMPETITION IN STOVES.

When all interested parties give their attention to removing a factor which exists to their mutual disadvantage there is a strong probability of the intruder getting the worst of it. Both the stove manufacturer who has confined the sale of his output to the stove dealer and the stove dealer who has not been aggressive in his stove display and salesmanship have had occasion to notice that the catalogue house has secured enough of the stove business to interfere with the profits of the stove business to the stove dealer at least, points out the Metal Worker. There is no occasion for this state of affairs if the stove dealer will devote a little time to the study of the methods which have been pursued by the successful merchants in his town. These have little interference with trade from catalogue house competition.

The method in question will be found to be the simple one of modern business practice. It involves good judgment in selecting stoves adapted to the needs of a community and then showing them to advantage, talking about them entertainingly and intelligently and advertising them properly. The bright, capable stove dealer will become familiar with the quality and character of the stoves sold by the catalogue house, the prices at which they are sold and the methods of selling. This will show him that he can readily supply more desirable and better stoves, not only with less trouble but with greater convenience to his home trade, and still undersell the catalogue house. If he is enterprising he will have nothing to fear from this source. The point where the local stove dealer is deficient is in the failure to bring before the people the fact that he can serve them better than any outsider. This can only be done by judicious advertising.



Aggressive Use of Advertising Matter.

For years a portion of every stove manufacturer's expense has been for advertising literature, which is furnished free to the stove dealers for general distribution. Every stove salesman who travels among the stove dealers is aware of the fact that a very large percentage of this costly advertising literature goes to waste. Here is where the stove dealer has not borne his share of the burden. It was his duty, in fairness to those who provided him with the advertising matter and in the desire to secure increased profits from his business, to have made some study of the best method of disposing of this advertising matter, so that everybody within any reasonable distance of his establishment should become aware that he was a live, hustling progressive stove dealer, distributing the kind of goods best adapted for the needs of his community. He should let the community know that he is prepared to sell at prices which are equal to those quoted by anybody, and that he has the additional advantage to his customers of bringing the selected stove direct to their houses and setting it up so that it can operate in the best possible manner.

In case of troubles with chimneys or failure to understand the management of the stove it should be the cheerful duty of the stove dealer to explain the cause of the trouble, to remove it, or familiarize his customer with the management of the goods. The purchaser will then have increased confidence in the home stove dealer. This the catalogue house is too far away to do, and the stove man who is to drive out this competition can make it clear that this is a distinct and positive disadvantage to the buyer. Even when the dealer carries these recommendations into effect he must go still further and follow the example of successful local tradesmen in using the local paper to make the general public familiar with the fact that his store is the only place to buy stoves to the best advantage.

Push Sales in Return for Trade Protection.

Then, again, every stove traveling man is aware of the fact that the display of stoves in the stores of too many who claim to be in the stove business looks as though they were in the junk business. It is necessary that the stove display be arranged with some taste, otherwise how can a man expect a woman of refinement to visit his establishment and have confidence in a dingy display of excellent stoves. Better stove display, that leaves nothing to be lost when compared with the display of the local dry goods or other popular store, must be provided, unless the stove dealer wants to relinquish the stove business to the catalogue house, the department store and the furniture dealer. For years stove manufacturers have confined their sales to stove dealers and

Holder for Heating Soldering Iron.

have protected them in their business by giving them a discount which was secured by the trade only. In return for this trade protection the stove dealer owes it to the stove manufacturer to be more aggressive in his work of distributing the product of the stove manufacturer.

SOLDERING IRON HOLDER FOR BLOW TORCH.

A device for heating soldering irons very quickly and with little fuel consists of a sheet iron pocket, (A), Fig. 1, and a 3-16 inch stove bolt (B) for fastening to blow torch. Cut a piece of No. 18 sheet iron to the shape shown in Fig. 2 and drill holes for the 3-16 inch stove bolt as shown. Bend the sheet iron as shown in Fig 1 and fasten to the burner, and the heater is complete.

Go after every man who builds a house in your town and convince him, by thorough knowledge of your subject, that he ought to put in a furnace and that your kind is the only one for him.

HARDWARE TRADE GOSSIP

Ontario.

Wm. J. Lowndes, plumber, Toronto Junction, has assigned.

Wm. Knight, Maple, was a hardware buyer in Toronto this week.

The People's Gas Supply Co., Ottawa, have opened a branch at Winnipeg.

W. F. Roberts, dealer in gas fixtures, Hamilton, has sold his business to Geo. Hatherley.

M. F. Irwin, salesmanager McClary Manufacturing Co., London, is on a two week's holiday.

W. A. Porter, of the Ontario Lead & Wire Co., Toronto, is away on a fortnight's holidays.

E. T. Dean, of Stewart & Wood, Toronto, is spending a vacation at Port Sanfield, Muskoka.

F. W. King, superintendent of the McClary foundries, London, is spending his vacation in Boston.

The Metallic Roofing Co. are putting a new roof on their factory at King and Dufferin streets, Toronto.

Adolph Henry, of J. Henry & Son, Orono, was a caller at the Toronto office of Hardware and Metal on Tuesday.

A. T. Fife & Co., Kenora, intend erecting a fine new hardware store building adjoining their present premises this Fall.

Gentle & Travis, steam and hot water heating contractors, have removed from 23 Scott street to 30 Richmond street east, Toronto.

Frank Russill, of the Russill Hardware Co., Toronto, returned this week from a fortnight's trip to Atlantic City, Boston and other eastern points.

A. D. Kennelly, manager of the Toronto branch of the McClary Manufacturing Co., has returned from a three week's holiday at Niagara-on-the-Lake.

The Pease Foundry Co. are now in their new premises at 36 Queen street E., Toronto, and will be prepared to receive exhibition visitors in the new building.

C. H. Whitworth, of Smith's Falls, has sold his hardware stock to Clark & Lewis and R. Hawkins, who will divide it. Mr. Whitworth will be general manager of the new Rideau Foundry & Malleable Co.

Taylor Bros. & Co., Carleton Place, have purchased the hardware business of P. M. Young, Almonte, and will conduct it as a branch establishment. J. D. Taylor will go to Almonte to manage the business there.

The marriage of F. Outram, late manager of the Globe File Co., Port Hope, and Miss Florence M. Johnson, Bowmanville, took place a week ago. Mr. and Mrs. Outram will reside at Port Hood, N.S., where he will take charge of a large coal mine.

Ben Noble, London; S. G. Gourlay, St. Catharines; Joseph Henderson, Niagara Falls; J. Neelands, Barrie, and George Millward, Port Hope, were amongst the Ontario plumbers in attendance at the Knights Templar convention at Montreal last week, there being almost as many plumbers at the Montreal gathering as at the Ottawa convention.

A writ has been issued by T. L. Wilson, hardware merchant, Ingersoll, against Jas. McKay, to recover the sum of $100 penalty under the act respecting registration of co-partnerships, for non-compliance with the requirements thereof by registering in the registry office a declaration as provided thereby within six months from the time of commencing business.

H. S. Howland, Sons & Co., Toronto, are putting in new fitting in their sample room. At the entrance to the room there is an oak handrail with gate dividing the outside corridor from the office and deskroom Two large silent salesmen, mahogany finished, will be used for plated and silverware. These have mirrors in the bottom which will add greatly to the effect. Show cases of the same finish are being installed for the lighter samples of hardware, and for the builders' and heavy hardware, oak shelving will be put in with bins and drawers. Visitors to the exhibition will find the new sample rooms greatly improved.

Quebec.

H. Blais & Co., plumbers, Napierville, Que., have registered.

Cleophas Falardeau, machinist, Causapscal, has assigned to A. Fortin.

A. B. Walsh, of Ormstown, was a visitor at some of the Montreal warehouses this week.

Thos. Douglas, of Douglas Bros., Toronto, spent the week at the firm's Montreal office.

T. McOuat, of T. McOuat & Son, Lachute, visited the Montreal jobbers on business this week.

C. M. Strange, sales manager of Lewis Bros., Montreal, returned on Monday from a brief vacation.

W. H. Evans, of the Canada Paint Company, is enjoying his Summer vacation at Prout's Neck, Maine.

A. E. Warren, of the staff of Frothingham & Workman, Montreal, is spending his vacation at Shawbridge.

Wm. MacKay, representing the Corbin Cabinet Lock Co., called on the Montreal wholesale trade this week.

Darling Bros. are installing a new electric freight hoist in the warehouse of Frothingham & Workman, Montreal.

Jos. W. Rayner, vice-president of the Skedden Brush Co., of Hamilton, was in Montreal for a couple of days this week.

A. A. Brown, manager of the McClary Manufacturing Co., Montreal branch, is at present in the west on an extended visit.

W. J. Lough, of the Coulonge Hardware Co., Coulonge, Que., visited Montreal this week, accompanied by his wife and family.

Chas. Chipchase, of the order department of Caverhill, Learmont & Co., Montreal, is spending his vacation in the mountains

Mr. Smith, of P. S. Chestnut & Son, Fredericton, N.B., was in Montreal a few days ago and called on his firm's connections there.

H. A. Gunn, sales manager of H. S. Howland, Sons & Co., Toronto, was in Montreal this week, making friendly calls on the trade.

Wm. Patterson, formerly with B. & S. H. Thompson & Co., Montreal, has returned from a successful business trip to the Old Country.

E. J. Rowlands, secretary-treasurer of Alex. McArthur & Co., paper manufacturers, Montreal, is enjoying his holidays in Western Ontario.

W. Holley, of the Robert Mitchell Company, Montreal, left last Saturday for England, where he will look after some business affairs for his firm.

Jas. Reid, buyer for Caverhill, Learmont & Co., Montreal, is taking his annual rest at St. John, N.B., and other points in the Maritime Provinces.

Jas. R. Baxter, formerly with L. N. Beard, St. James street, Montreal, returned on the Empress of Britain from England, where he has been on business for some weeks.

W. F. Canavan, manufacturers' agent, Montreal, is calling on the Quebec lumber camps in the interests of Josiah Fowler, the axe manufacturer, whom he represents in this province.

Thos. Blaikie, city representative of the Dominion Wire Manufacturing Co., Montreal, left on Thursday to spend his vacation at Portland and other points on the Maine coast.

Jos. A. Gagnon, trading as the Hardware Specialty Mfg. Co., Chambly, has failed with liabilities, $32,718. He failed at Three Rivers as a grocer 16 years ago, and subsequently ran the Sheffield Cutlery Co., Montreal, which was wound up two years ago.

J. H. Plummer, the president of the Dominion Steel Company, may not return to Canada for some time. Mr. Plummer collapsed after the annual meeting in Montreal, and had to be carried on the boat. A letter from England says that his health is far from satisfactory.

Western Canada.

S. M. Jean, hardware merchant, St. Boniface, Man., has assigned.

A. C. Lawson, Cartwright, Man., expects to open his new hardware store in a day or two.

I. P. Friesen, hardware merchant, of Rosthern, has purchased A. P. McNab's elevator at that place.

The Western Hardware Company, Regina, has sold its property where the fire recently took place to Cohen & Finklestein for $15,500.

Armstrong, Smith & Dowswell have opened a hardware store at Regina, Sask., and wish to receive catalogues and circulars from the wholesale trade.

The J. H. Ashdown Hardware Company, Winnipeg, have increased their capital stock from $1,000,000 to $2,000,000 in order to handle their increasing business.

WORKING OF QUEBEC TAX.

Although the Quebec Government's imposition of a tax on commercial travelers is being evaded by many salesmen from across the line, it is nevertheless having an undoubted effect on the number of foreign travelers doing business in that province. Naturally enough, the large wholesale houses of Montreal are beginning to feel a narrowing tendency in their source of supply, and it is becoming somewhat difficult for them to keep their stocks as varied as formerly.

Of course there are several United States firms who are more or less cheerfully paying their travelers' taxes, so that they can go about their business in Quebec Province with a clear conscience. But these are large manufacturers, producing, for the most part, staple articles the demand for which is sufficient to justify them in paying the tax. In this respect the Montreal wholesalers are probably no worse off than before.

It is in the supply of trade-bringing novelties that the jobbers now find themselves short. These are generally manufactured by comparatively small firms, who cannot afford to pay the travelers' tax because their sales in the province are limited and their profits by no means heavy. Some of them are sending over their travelers despite the fine, and allowing them to run chances on being caught. But it would take more than a natural born optimist to do business under these circumstances.

At present the Montreal wholesale firms are compelled either to purchase their novelties from these wandering fugitives or send their own representatives to the United States markets to choose their stock. In this way additional expense is incurred, and the business handicapped. It seems a short-sighted policy on the part of the Quebec Government to thus deliberately hamper the business houses of their own province in the struggle for commercial pre-eminence.

THE NATIONAL EXHIBITION.

The Canadian National Exhibition opens at Toronto on the 27th of the present month, and there are very few merchants within convenient distance who will not take advantage of the cheap rates to visit Toronto and the Exhibition. The Process Building will be among the points of special interest at the fair, while the new Stove Building will also be a centre of interest to all hardware and heating goods dealers.

Readers of this paper are invited to make the offices of the MacLean Publishing Co., 10 Front street east, their business headquarters while in the city. Being in the heart of the wholesale district and close to the leading hotels, merchants will find it a convenient location to have their mail addressed to as well as to come and do such letter writing as they may desire to do before returning home. Writing tables in our quiet offices will be greatly preferable to those in the crowded hotels.

Hardware merchants in Ontario have an additional reason for attending the exhibition this year because of the holding of the convention of the Retail Hardware and Stove Dealers' Association in Toronto on Tuesday and Wednesday, Sept. 4 and 5, during the second week of the Exhibition, the gathering providing an excellent opportunity to meet and hear the views of brother hardwaremen from all parts of the province.

CANADA'S IRON INDUSTRY.

The production of pig iron in Canada for the first six months of 1906 according to statistics issued by the American Iron and Steel Association, give the Canadian production at 282,010 tons, against 257,797 tons in the last half of 1905, and 210,206 tons in the first half of that year. The production for the six months this year was greater than for any twelve months prior to 1902. This encouraging record of growth may be due in part to the fiscal policy of the Dominion Government in assisting by tariff and by bounties the early stages of the iron and steel industry in this country. The existing laws under which bounties are being paid has nearly expired. There are some minor bounties on rods, plates etc., which began but recently, and the duration of which is not fixed by law, but for pig iron and the more important steel products the term is now in its last year, and bounties are at minimum rates, 35 per cent of the original bounties. For the fiscal year ended June 30 last the total amount paid in bounties showed the expansion of the industry. A return presented to Parliament gave the amounts for the eleven months to May 31 as: Iron bounties, $624,191; steel bounties, $939,591. These compare with $248,417 iron bounties and $64,360 steel bounties in the full fiscal year 1900.

Without the aid of the bounties it is certain that our iron and steel industry would not be in the flourishing condition it now enjoys, although the activity of the United States producers in looking after their home market has relieved Canadian producers from American competition and helped to build up the industry in this country. The outlook for the future is quite hopeful and the indications are that the Canadian rail mills will soon be in a position to handle the enormous demands for rails from the various Canadian railway companies which are honey-combing the country with their net-work of rails.

ELECTRIC SMELTING PLANT.

The announcement that a big steel firm of Pittsburg is preparing to put up an electric smelting plant at some point in Canada where water power and ore are available is good news to Canadians, who will learn with satisfaction that such early and satisfactory results are to follow the expenditure of a few thousand dollars by the Dominion Government to cover the cost of the recent experiments at the "Soo." It is not generally known that ever since the experiments closed the electric furnace has been kept in operation on a commercial basis by the Algoma Steel Company, the product being a pig iron containing a very high percentage of nickel. The furnace resembles a large arc light, the power transmitted from the two poles generating a tremendous heat which smelts the ore, removing the slag while allowing the nickel and iron to form itself into pigs.

An electric smelting plant, capable of turning out 20 tons of pig iron a day, will soon be in operation in California, installed by Dr. Herault, of France.

A RETAILER'S OPINION.

A topic of discussion among retail hardware dealers at the present is: "Will the retail merchants be able to compel the wholesalers to refrain from selling direct to the consumer and do a strictly wholesale trade?" There are various opinions expressed on this subject, and just what the results of the Hardware and Stove Dealers' campaign will be is awaited with interest.

In speaking of this question one Toronto dealer said: "I know of wholesalers who send their representatives to builders, and not only offer them hardware at the same price they quote to the retailer, but often lower. Any agreement we would make with the wholesalers to stop this practice is, of course, considered illegal trade restriction by our present laws. I almost think at times that we should go in a body to Ottawa and ask for a change in the law whereby we could make arrangements with the wholesalers to eliminate injurious business methods."

NEWFOUNDLAND'S TRADE LOOMING.

The Governor-General's visit to Newfoundland with the rumored intention of preparing the way for the admission of the Ancient Colony into the Canadian Confederation is encouraging to the hopes of that increasing member of Canadians who actively desire to see the island, politically as well as geographically, a part of the Dominion. Commercially, the ties of common interest are being strengthened. The American consul at St. John's has submitted a report designed to bestir American manufacturers to take a greater interest in Newfoundland. He says:

"During the past decade Newfoundland's imports have grown from $5,986,861 to $10,279,293, while its exports have risen from $6,638,187 to $10,669,342, an expansion of the total trade from $12,625,044 to $21,148,635. During these ten years the imports from Britain have increased from $1,975,754 to $2,654,908, those from Canada from $2,231,641 to $4,105,569, and those from the United States from $1,973,721 to $2,750,114. In the year before last imports from the United States had reached their high-water mark of $2,991,022, and those from Canada $3,423,225; but it will be observed that the former have declined nearly $250,000, while the latter have increased almost $700,000.

"An analysis of the trade returns of the colony show that in the great majority of instances the import of commodities from Canada had increased at the expense of the United States, a fact attributable in part to the friction arising out of the fishery dispute between Newfoundland and the United States.

"There is need for vigorous action by American manufacturers if they would hold this growing and profitable market. The prosperity of the island is so staple and its trade conducted on such conservative lines that insolvencies are rare and its chief commercial concerns enjoy a high rating with credit agencies. The financial standing of the colony is such that its treasury reports a surplus of $134,000 for the last fiscal year, making the sixth successive surplus in as many years, out of which the Government has set aside a cash reserve of $450,000 and employed the remainder in adding to the appropriation for public services. The revenues, which are almost altogether obtained from customs duties on imports, have grown in amount in each succeeding year, despite the removal of taxation from fishing, farming, and mining requisites and from flour, molasses, and kerosene oil, staple necessaries of the masses of the people."

THE SITUATION IN METALS.

For the first time this season the leading Montreal metal jobbers are noticing a lull in the volume of business. It is remarkable that this condition has held off so long and even more remarkable that the calm is so slight when it has come.

Although there have been some fluctuations in tone during the past week, there is very little to report in the way of price changes. So far as ingot metals are concerned, the only change is in pig lead which has stiffened somewhat, and is now being quoted at from $4.40 to $4.50 per hundred pounds.

Ingot tin seems, at present, to be fairly steady at the price as recently advanced. During the early days of the week the tin situation was somewhat easier, but on Thursday it firmed up to the old prices.

Both spelter and sheet zinc are very firm at the figures currently quoted. In European markets, the demand is again becoming brisk, and the London exchange reports prices 10s. higher this week. Whether Canadian prices will be advanced in consequence is at present uncertain, but at any rate that is the tendency of the market.

Copper and antimony have not experienced any change, and both continue to be in good demand. Antimony has steadied since the slump of a few weeks ago, and is now firmly held at the price quoted.

Jobbers who sell chiefly from stock report a good average business in sheets and plates, but nothing out of the ordinary. On the other hand, importers state that they are booking a very heavy tonnage in these lines, for future delivery. Nearly all producing mills are filled, and early shipments are hard to obtain.

From present appearances, galvanized sheets will soon experience a general advance, such as would have been justified some time since. Already one leading Montreal jobbing house has advanced prices on their brand of galvanized, and others are expected to follow.

Tin plates have been advancing all week and large consumers are finding it a difficult matter to secure prompt deliveries of their specifications. The scarcity of tin plate bars is being keenly felt by producers who find it impossible to make any intelligent promise regarding shipments until the bars have been actually rolled.

OUR TURN NOW.

Canadian trade has passed the half billion dollar mark. Ten years have shown an increase of 133 per cent. Gone are the days when the sons of Canada were forced by reason of dull times to expatriate themselves in order to earn a livelihood, and gone also are the taunts at Canada's slowness. And the end is not yet: this is but the beginning.

Why did not this prosperity come to us years ago, and why did the United States leave us so far behind? That we have produced as good a class of men goes without saying. Seemingly all we lacked was confidence in and a knowledge of our own resources. Yet we cannot help but feel some pride in knowing that the United States owes at least some of her greatness to Canadian brain and brawn, for we have lost to them 1,200,000 native born Canadians, many of whom occupy high positions. In the United States are 13,000 school teachers and professors of Canadian birth. Of physicians and surgeons there are 4,000, and of engineers, who are most valuable men in developing a new country, we have given 3,000. If figures of other callings in which Canadians have distinguished themselves, and contributed to the wealth of the States were made known, the results would be astounding.

But Canada's time has come. Her talent and her capital are remaining at home, and other capital is coming in. And the men are coming back. Last year some 210,000 came into the Canadian west from the States to till the soil. The east, too, is gaining, although not so fast, in the number of manufacturers who are coming across. What is necessary to keep the good work going is to show that in Eastern Canada we have the resources and opportunities, and in a few years the half billion mark we are now so proud of will look small indeed.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 62.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Cotton Goods——Such as cod lines, chalk lines and twine, have advanced.

Cotton Sash Cord—Current price is 35 cents per pound.

Pig Lead—An advance of 5c per hundred lbs.

Galvanized Iron—Gorbal's "Best Best" advanced 5 cents.

Pig Iron—Summerlee, No. 1, $22.50; No. 2, $21.50.

Mild Machinery Steel—Quotations for base sizes $2.15.

TORONTO.

Solder—We quote one cent higher.

Turpentine—A two cent advance has been made in line with our prediction of a week ago.

Pig Iron—Radnor is now quoted at $33 per ton.

Pig Lead—Quotations are 10 cents higher.

Ingot Tin—Last week's advance has been maintained.

Old Material—Prices are firming up.

Twines and Rope—Manilla rope is likely to advance.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 17, 1906.

Following the very noticeable lull of a week or so ago, business this week is decidedly picking up and is now assuming good proportions. In nearly all the local warehouses, practically the complete staffs are now on hand, and they are finding work enough to keep them busy. The travelers are all back on the road, and, in consequence, orders are coming in freely.

Cotton goods have advanced and such articles as cod lines, chalk lines and twine are now quoted higher. The ruling price for cotton sash cord is 35 cents per pound. Bolts are still very scarce and the wholesale trade is experiencing difficulty in filling orders.

Ammunition and guns are going very briskly and business in these lines is rapidly increasing as the Fall season approaches. Other goods which are especially active just now, are horse blankets, skates, cow ties, lanterns and sleighbells. The latter are not subject to the usual inquiry for this season, however, as the retail trade carried over heavy stocks from last year.

AXES—There is no special feature to remark this week. Prices generally ruling are being quoted as follows: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—The usual business is being done and we quote: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—The approach of the Fall is the signal for a quickened inquiry. The market has not yet recovered from the slashing which was in evidence some months back. Prices are by no means steady, but as an average figure we may quote: Cold blast, $4; No. 0, Safety, $3.50 to $3.75.

COW TIES—A brisk demand is felt just now. Discount quoted on cow ties is 40 per cent. off list.

STALL FIXTURES—These goods are sharing the activity of cow ties, which are a kindred line. We give discount as 35 per cent. off list.

SLEIGH BELLS—Sales so far have been light, as is to be expected, considering the fact that retail dealers disposed of little or no stock last Winter, Leading wholesalers here are quoting the same prices as last season, and we repeat as follows: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape, $1.15 to $2; shaft gongs, 20c to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

RIVETS AND BURRS— Conditions in this trade are unchanged since our last report. We still quote: Best iron rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—Business at present is rather quiet. Our prices are as follows: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b. Montreal.

MACHINE SCREWS — A normal turnover is reported. We give discounts as follows: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—Dealers find it difficult to fill orders owing to the scarcity of bolts. Our discounts are as follows: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS—A fair trade is reported. We are still quoting as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—Trade is still somewhat unsettled, but a fair average on prices quoted, is struck at $2.05 per keg base, f.o.b. Montreal.

CUT NAILS— Business is dull, but the price remains $2.20 per keg base, f.o.b. Montreal.

HORSESHOES—Sales are about as usual for the season. Our prices are: P. B. new pattern, base price $3.50 per 100 lbs.; M. R. M. Co., latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs. extra.

SPORTING GOODS—A good demand for all Fall goods exists, and the season promises to be an active one.

BUILDING PAPER—A quiet tone pervades the market which has not shown any change for some time past.

CEMENT AND FIREBRICK—Orders are mostly for small lots, but trade is very active. We still quote prices as follows: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—Quotations remain as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

GREEN WIRE CLOTH — Sorting orders are still being received at the unchanged quotation of $1.45 per 100 square feet.

AMMUNITION—Sales are increasing right along and there is every indication of a very large Fall trade. We quote as follows: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Aug 17, 1906.

Fall shipments in hardware are assuming considerable bulk just now, and business on the whole is noticed to be more brisk than during the past few weeks.

More firearms and ammunition are being sold this year than previously, which is a token of the general prosperity throughout the land.

It is not unlikely that an advance will shortly be made in sisal and manila rope. Some eastern manufacturers are also making an advance on cotton twine and cord, but no changes have been made by Ontario houses.

AXES AND HANDLES—Seasonable trade continues to be done.

CUTLERY AND SILVERWARE—A good demand is felt for these lines.

SPORTING GOODS—An unusually good business is being done particularly in shooting materials.

WASHING MACHINES — A very good demand still exists and with the return of customers from Summer resorts a good trade can be developed.

CHAIN—We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; 3-8 inch, $3.95; 7-16 inch, $3.80; 1-2 inch, $3.65; 9-16 inch, $3.55; 5-8 inch, $3.45; 3-4 inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING—We quote the following prices: 2-inch mesh, 19 w.g., discount 50 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE—We quote: $2.17 1-2 f.o.b. Cleveland.

BARB WIRE— We quote the following prices: On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65; f.o.b. Toronto.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The open market continues. We quote: $2.05 base.

CUT NAILS—We quote: $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7 1-2 off list. "M.R.M." brand, 55 per cent. off. "Monarch" brand, 50 and 7 1-2 off. "Peerless," 50 per cent. off.

HORSESHOES—Our quotations continue as follows: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

HORSE BLANKETS—Large orders are being booked and trade is picking up.

SLEIGHBELLS—Orders are light owing to large holdover stocks from last year.

FARM TOOLS— Manure forks are moving and hay forks are still selling.

RIVETS AND BURRS—Tinned rivets are now quoted net extra 4c. per lb.

SCREWS—We quote: On gimlet point 70 and 5 per cent. off; on cone point, 70 and 10 per cent. off list.

BOLTS AND NUTS—Stocks are bare and supplies very hard to get. Demand is keen with prices very stiff. We quote 55 and 10 per cent. off list.

CEMENT—We quote: For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch fire brick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27 1-2c. to 35c.

HIDES AND WOOL—The situation has not varied materially. The trade is waiting for something to turn up. A cent is off the top price for unwashed wool.

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 17, 1906.

A very large turnover in metals of nearly every class has been effected by the metal dealers here during the past week. Price changes have been few but the general tendency is now unmistakably upward.

Copper remains steady and is very firm. There are no great stocks on hand in Montreal, and jobbers are not showing much anxiety to sell at current prices, as higher figures are looked for.

Some New York authorities are now predicting that tin will again reach a high price before any decline is made. However, uncertain any such statements must be, the fact remains that after the sharp advance of last week, tin is necessarily firm and for the present at any rate an advancing market looks promising.

Pig lead is higher this week the tone of the market having firmed up considerably. An advance of 5 cents per hundred has been made and an active demand exists.

Zinc is stiffening in foreign markets and the effect is bound to be felt here In London, both spelter and sheet zinc have advanced 10s., but as yet Canadian metal merchants are quoting last week's prices.

A heavy tonnage is being booked in sheets and plates. In all of these the market is very firm, and advances are momentarily expected. Indeed, so far as galvanized iron is concerned, at least one manufacturer's products have advanced during the week. For some time past jobbers' prices have been considerably lower than the selection warranted, and a general revision is considered imminent.

COPPER— The light stocks on hand here have made dealers not overly anxious to sell. The market is very firm at the following prices: Ingot copper, 21c. to 21 1-2c.; sheet copper, base sizes, 25c.

INGOT TIN—Last week's advance is held steadily. We are still quoting: 44c. to 44½c. per pound.

ZINC SPELTER—Advances in the English market amounting to 10s. have stiffened conditions here. We still quote, however, as follows: $6.75 to $7.00 per hundred pounds.

ANTIMONY—Tighter conditions prevail this week and higher prices are expected. For the present we quote 27c. per pound.

PIG LEAD—This metal appears to have completely recovered from its recent weakness and we are now quoting an advance of 5 cents. Our prices are $4.40 to $4.50 per hundred pounds.

PIG IRON—Carron, Clarence and Cleveland have all been advanced fifty cents, while Summerlee is lower. The heavy demand on the continent for English and Scotch irons is gradually reducing stocks held and holders are consequently inclined to demand higher prices.

"Dom.," No. 1, $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.50	"	"
" (special)	21.50	"	"
Summerlee No. 1	21.50	"	"
" No. 3 (soft)	20.50	"	"
Clarence No. 1	19.50	"	"
" No. 3	19.00	"	"
Cleveland No. 1	19.50	"	"

BOILER TUBES—We still quote: British and American tubes, 1½ inch, 8½c.; 2 inch, 8½c.; 2½ inch, 10c.; 3 inch, 12c.; 3½ inch, 15½c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—A fair trade is be-

ing done at the following prices: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror High Speed Steel, 60c.; Jowitt's 11c. to 11½c.

Diamond J., 6¼c. to 7c.; Jowitt's Best,

MERCHANT STEEL—Business is fairly brisk. We give the following prices: Sleigh shoe, $2.17½; tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.15 base and upwards; square harrow teeth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—Prices remain: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON— Prices on Gorbal's "Best Best" have advanced and from present appearances higher prices will soon be the general rule. We quote prices as follows: Queen's Head, 28 gauge, $4.35 to $4.60; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge, $3.35; Gorbal's "Best Best," 28 gauge, $4.25 to $4.50; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—We are quoting: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

CANADA PLATES—Heavy bookings are now being made. Quotations remain: 52's, $2.60; 60's $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

TIN PLATES—The market remains steady at the following prices: Cokes, base size, 1C 14 x 20, $4; charcoal, base size, 1C, 14 x 20, $4.25.

TERNE PLATES—Dealers are still quoting $6.85.

SHEET ZINC—The market remains unchanged at the following figures: $7.75 in casks and $8 in less than casks.

SHEET LEAD—There is no new feature in the market. We quote: 2½ lbs., 5½c. by the roll; 3 lbs. and heavier, 5¼c. by the roll; small quantities, 25c. per hundred lbs. extra.

BAR IRON—The price has not changed, and quotations remain $2.05 base, f.o.b. Montreal.

OLD MATERIAL—There is little business doing just now, but, in spite of this there has been considerable inquiry for scrap metals, a large number having been received from the west. Indications are that if any changes are made they will be in the direction of rather better figures. In a month or so more the foundries will become a little more active and the demand will then pick up. Quotations are all the same as follows: Light copper, 14 1-2c.; heavy red brass, 14½c.; yellow brass, 11½c.; light brass, 7½c.; lead, 3¼c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $10.50 to $11; mixed rags, $1 to $1.20 per 100 lbs.; old rubbers, 7¾c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, August 17, 1906.

More strength is evident in the market at present than has been manifest for some weeks. While it is expected that buying will be active from now on until the close of navigation, the great strength shown in outside markets is unusual at this season. Locally one observer this week likened conditions this year with those of 1899 when buying kept up all Winter.

All the advances made in outside markets have not been duplicated here as yet, but changes have been made in pig iron and lead as well as in old material. The U. S. market reports concerning iron are very glowing, while a similar situation exists in Great Britain, where producers are said to be withdrawing prices. Ingot tin is held firm at last week's rise and pig lead is moved up to $4.50.

Stocks of bar iron, bolts and nuts are very low and with pig iron strengthening prices on these lines may go still higher.

PIG IRON—Another advance has been made on Radnor and it is now quoted at $33. On some English lines prices have been withdrawn and altogether the market is stiff and likely to go even higher. We quote: Radnor at furnace, $33; Hamilton at furnaces, No. 1, $21; No. 2, $20.50; Londonderry, f.o.b., Toronto, No. 1, $22.50; No. 2, $21; Middleborough, $22.

BAR IRON—Demand is heavy and stocks are bare and hard to replenish. We quote: $2.15 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

INGOT TIN—The market is very active and last week's advance is held firmly. Quotations are 42c. and 43c. per lb.

TIN PLATES—Trade is active with prices unchanged. We quote: Cokes, base size, 14x20, $4; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS — Prices in Toronto are cut up but generally the demand is good and prices are steady. We quote: 16 to 20 gauge, $3.65 up.

BRASS—The market continues firm with no price changes. We quote: 23c. to 24c. per lb.

COPPER—Prices are firm at the same quotations. Our prices are: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

LEAD—More activity is evident and in response to outside conditions a ten cent advance has been made. Local dealers are quoting $4.50 for imported pig, and $5 per 100 lbs. for bar lead.

ZINC SPELTER—The market is quiet and prices remain unchanged. We quote: 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

BOILER PLATES AND TUBES — The demand is good and an advance of 15c. per 100 lbs. for 3-16 inch tank plates is looked for soon. Our prices are: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60; tank plates, 3-16 inch, $2.45; tubes, per 100 feet, 1½ inch, $8.50; 2, $8.80; 2½, $10.75; 3, $12; 3½, $15.80; 4, $20. Terms, 2 per cent. off.

ANTIMONY—Good business is being done in small lots. Prices are unchanged at 27c.

OLD MATERIAL — In response to stronger conditions in the metal markets we are reporting advances this week in heavy and light copper and machinery cast scrap. Dealers' buying prices are as follows: Heavy copper and wire, 15c. to 15½c. per lb.; light copper, 13½c. to 14c. per lb.; heavy red brass, 13c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8¼c. per lb.; tea lead, $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs.; scrap zinc, 4½c. per lb.; iron, No. 1 wrought, $11; No. 2 wrought, $3 to $5; machinery cast scrap, $15; stove plate, $10; malleable and steel, $5; old rubbers, 7¾c. per pound; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—We quote the following prices: Anthracite in cars at bridge, egg, stove and nut, $5.40; grate, $5.15; pea $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. P. and S., $1; slack, 75c.; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1¼ inch, $2.55; ¾ inch, $2.45; mine run, $2.35; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

U. S. IRON AND METAL TRADES.

From the Iron Age, Aug. 16, 1906.

In pig iron the tide of buying as well as of values continues to rise. Such a movement in August, it is safe to say, is without parallel. Whether appreciation is general enough of its possibilities for harm really to avert the danger remains to be seen. That there is some excitement and that excitement is to be deprecated is admitted.

Heavy purchases of Bessemer and foundry irons for delivery in the first quarter and the first half of 1907 are the significant developments of the week. Practically all the steel making pig iron that can be produced at merchant furnaces in the remainder of the year had been swept up. To the foundry trade an equally significant fact is that what little foundry iron is available for this year's delivery can only be had at advancing prices and usually in connection with contracts for 1907 iron.

Steel manufacturers in the central west, in view of the shortage in Bessemer iron for 1906, have come into the market for 1907 requirements, and sales of 100,000 tons at $17.75 at Valley furnace have been made for delivery in the first half of next year. The United States Steel Corporation has not yet participated in the buying for 1907. In common with other steel manufacturers it will find it necessary to limit its steel production in the balance of this year because of inability to get pig iron. It has been a buyer of melting scrap, however, though the relief in this direction is but slight. The corporation bought 13,000 tons of basic iron at $17.90 to $18, delivered at Pencoyd, Pa., in the last quarter of the year, taking all the eastern basic that was offered. The total purchases of basic in the past month for eastern steel works reached 250,000 tons, quite a little being for the first quarter of 1907.

Sellers of foundry iron have put up their prices about 50 cents a ton in the week, and the market is still rising. The minimum for Southern No. 2 is now $14.50 at furnace, and sales at $15 have reached a respectable aggregate. In the Cleveland district melters of iron are going far afield for supplies, and there is little promise of an abatement of the present scarcity this year.

Eastern Pennsylvania furnaces, which sold on the basis of $17.75 at furnace for No. 2 Foundry iron two weeks ago and at $18 last week, have now put their prices at $18.50. Sales in New England and the east in the past week amounted to 80,000 to 90,000 tons, largely for next year's delivery. The importation of pig iron is not an immediate contingency. A further advance of about $1 a ton might let in some iron for consumption at tidewater, but even at a parity foreign iron would be taken very reluctantly.

Track supplies have been heavily bought in the west, and spikes have advanced $2 a ton. In rails a lull appears in all markets.

A meeting of steel corporation sales agents in the past week brought out reports of the most optimistic character. No precedent for present conditions at this season is found in the experience of those longest in the business.

The cast iron pipe trade presents the unheard of phenomenon of Spring orders being placed in August. At Kansas City a 5,000-ton contract for cast pipe was taken by the largest producer.

The steel corporation is sold up on sheets and tin plates to the end of the year, but independent interests, in the present scarcity and high price of steel, are not reaping a harvest.

The bar situation is increasingly strong and the possibility of an advance is intimated.

Scarcity of coke adds to the difficulties of the situation. The steel corporation is still a buyer.

LONDON METAL MARKETS.

From Metal Market Report, Aug. 15, 19 6

PIG IRON—Cleveland warrants are quoted at 52s. 1½d., and Glasgow standard warrants at 52s. 7d., making prices as compared with last week 1s. higher for Cleveland warrants and 10d. higher for standard warrants.

TIN—Spot tin opened easy at £181 12s. 6d., futures at £181 2s. 6d., and after sales of 350 tons of spot and 350 tons of futures closed weak at £180 7s. 6d. for spot, £180 2s. 6d. for futures, making price compared with last week £1 12s. 6d. higher on spot, £1 higher on futures.

COPPER—Spot copper opened quiet at £83 5s., futures £83 5s., and after sales of 150 tons of spot and 150 tons of futures, closed firm at £83 10s. for spot and £83 5s. for futures, making price as compared with last week 2s. 6d. higher on spot and 7s. 6d. higher on futures.

LEAD—The market closed at £17, making price as compared with last week 6s. 3d. higher.

SPELTER—The market closed at £26 15s., making price as compared with last week unchanged.

UNITED STATES METAL MARKETS.

From the Iron Trade Review, Cleveland, Aug. 16, 1609.

From the Iron Trade Review ,Aug 16

So heavy has the buying movement of the past week become and so strong is the demand for all grades of iron that producers are uniting their efforts to avoid the runaway market now threatened. An excited tone already prevails in some districts and there is reason to believe that certain consumers are attempting to buy ahead of their real requirements. Prices, especially on spot shipment iron, have advanced sharply and the top figures are apparently not yet reached. Off-irons are selling without difficulty and melters are eagerly clearing furnace yards of inferior grades. The principal sales of the week were about 50,000 tons of various grades in the Chicago district, some 60,000 tons of basic in the Philadelphia district and 100,000 tons of Bessemer in Youngstown and Pittsburg for delivery in the first quarter and first five months of next year, the price of all but 10,000 tons of the Bessemer being $17.75 valley furnace. Many foundries are being compelled to buy spot iron in advance of prices, as high as $19.95 being paid in Philadelphia. The supply of Bessemer in the valleys is extremely small and is being held at $18 to $18.25 at the furnace for this year's delivery. Southern No. 2 foundry has advanced to $15 for early shipment.

With sales now being closed for delivery of iron through the first half of next year furnace interests are becoming anxious about their supplies of raw materials and the prices they will have to pay. Coke producers are quoting reluctantly and higher prices are in prospect. As regards ore for 1907, mining interests are opposed to an early opening of the buying season and will postpone it as far as possible. It now appears that the advance in price over this year, if any, will be small.

The scarcity of crude steel continues, but steps are being taken to increase the production of sheet bars and relief is promised at an early date. The principal manufacturer of sheets has increased its production at Sharon and Muncle, and will soon place other mills in operation. The Carnegie Steel Co. has practically all the orders it can take on plates for this year. Other producers are able to take new business, but are falling behind on deliveries. Mills rolling structural shapes are receiving specifications in great volume, but new business is not especially large. The demand for track supplies is heavy. Scrap is much stronger with quotations advanced.

Nova Scotia Trade News.

Halifax, N.S., August 14, 1906.

With good orders coming in for the season of the year and collections very satisfactory, hardware jobbers of this city have no complaint to offer as regards the condition of trade. There have been good sales of picks, shovels and also drills. Some axes are selling and also saws, but the sales of these are light as yet. The market is pretty steady and there are no indications of any immediate change in the price list. Tons of cement are being used daily in connection with the paving of the streets of Halifax and the Rampart Cement Co., of Sydney, which has the contract, is kept busy in supplying this article.

The Dartmouth Ferry Commission have awarded the contract for installing an Oxford boiler and heating apparatus to J. J. O'Toole. The tenders were

Crump & Peurier	$795
Farquhar Bros.	675
Ritchie & Co.	654
Macdonald & Co.	647
Longard Bros.	579
A. C. Young	567
J. J. O'Toole	449

The city council of Halifax has decided to purchase another fire engine, the tender of the Waterous Engine Co. for an 800 wine gallon engine being accepted. The engine will cost $5,500. The council also annulled the contract with the Canadian Fire Engine Co., as the engine was not delivered within the time prescribed. The tender of Macdonald & Co., foundrymen, Halifax, for the construction of an eight foot aerial truck of the Horton pattern was accepted. The ladder will cost $4,900.

At the annual meeting of the Standard Coal & Railway Co. held in this city the following officers were elected. Directors: R. H. Brown, John Strachan, J. C. Mahon, H. J. Logan, M.P., Hon. C. N. Cummings, L. F. Gillespie, J. D. Brown, Robert O'Mullin, J. A. McKinnon, and H. A. Lovett. At a subsequent meeting of the directors, R. H. Brown was elected president, John Strachan, vice-president, and F. W. Handright, secretary; J. H. Gillespie, of Parrsboro, was elected manager.

Mining machines will be in use in No. 6 colliery, Cape Breton, in a very short time. Longwall machines have arrived already. The work at No. 6 has been done hitherto by hand picks.

Hardware and Metal Conditions in Manitoba

(Market quotations corrected by telegraph up to 12 a.m. Friday, Aug. 17, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

For the month of August business is exceptionally brisk, the turnover being considerably larger than last year. Values are steady, there being no quotable change of importance.

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE — We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ¼ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅝ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅝ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅝ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ⅜, $4.10; ½, $7.20; ⅝, $4.60; ¾, $4.30; ⅞, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—Discount on "Irwin" bits is 47 1-2 per cent., and on other lines 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES—As noted last week, the price is now 1 1-2c. per lb. A decline of 1-4c.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discount is 50 per cent.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Quoted now at 4c per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC.—As noted last week, shot has been advanced 25 cents per 100 lbs. We quote prices as follows: Cartridges, Dominion R. F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33⅓; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.25; chilled, $7.75; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—Prices are: Bar iron (basis), $2.50; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jesson, $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

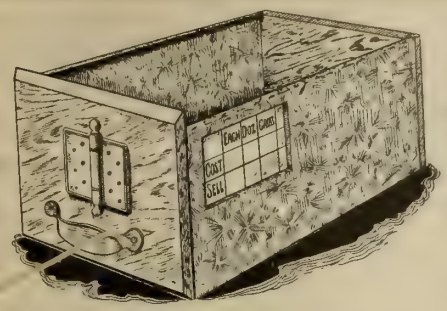
PIG LEAD—The pig lead market is still reported very firm and local prices are maintained steadily. The price is $5.25 per cwt. with a reduction of 25c. per 100 lbs. on ton orders.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.



TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are quoted as follows: Silver Star, per gal., 21c.; Sunlight, 22c.; Eocene, 24c.; Pennoline, 25c.; Crystal Spray, 24c.; Silver Light, 22c.; gasoline, 70-72 (engine), 25½c., in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE —Prices are now quoted as follows: White lead, pure, $7; bladder putty, in

An Attractive Hardware Store

is the best advertisement you can have, for it appeals to every one of your customers and will draw their trade as sure as a magnet will draw a piece of steel.

Give your store an air of prosperity. Make it look as if you were doing the best business in the town. If your store looks like a second-hand junk shop people will feel like paying second-hand prices.

If your goods are well displayed on shelf boxes your clerks will be able to wait on twice as many customers.

Goods displayed on shelf boxes often suggest articles which your customers had not thought of buying.

The **Bennett Shelf Box** has metal sides and saves 20 per cent. space over the old-fashioned wooden box. It has oak fronts and each box is supplied with a brass pull. Write for price list.

978. Machine tools—A Birmingham firm is open to supply Canadian firms with machine tools.

979. Machine tools— A Walsall firm wish to appoint an agent in Canada for the sale of machine tools.

980. Agent—A Dudley firm wish to appoint an agent in Canada for the sale of machine tools, vises, anvils, etc.

981. Kettles, etc.—A Cradley Heath firm wish to find a market in Canada for their kettles and saucepans.

982. Agent—A Hanley firm would like to appoint a first-class agent in Canada for the sale of tiles, blue and red bricks, terra cotta and sanitary appliances

ACME CAN PICNIC.

The first annual picnic of the employes of the Acme Can Works, Montreal, was held at Electric Park, Sault au Recollet, last Saturday afternoon. There were in attendance some three hundred employes and friends. Everyone enjoyed the outing, which lasted from 8.30 in the morning till 7 in the evening. The several committees did their work well and everything was run off in a most satisfactory manner. There were present several representatives of different manufacturing and business enterprises in Montreal.

President Jas. B. Campbell and Vice-President Wm. Pratt, of the Acme Can Works, were both in attendance and helped out the employes, having a good word for everybody.

NOVELTIES FOR THE HARDWAREMEN

Readers desiring the addresses of the manufacturers or jobbers of the articles described, or any additional information, can secure the same from the Editor of HARDWARE & METAL.

REVERSIBLE PORCH SWINGS.

Indiana Bent Rung Ladder Company have added to their lines of manufacture, porch swings, two of which are shown in the accompanying cuts. Both have reversible backs, which can be changed quickly and easily. They can both be taken apart in a few minutes and knocked down for storage or shipment. They are made from three to six feet in length to suit requirements. The woodwork is finished in golden, weathered or green oak, hand rubbed. The swing shown in figure 1 can be packed in a crate 6 inches thick, and the one illustrated in figure 2 in a crate 3½ inches thick. The Indiana Bent Rung Ladder Company, of Indiana, Pa., will be glad to give further information relative to these swings to readers.

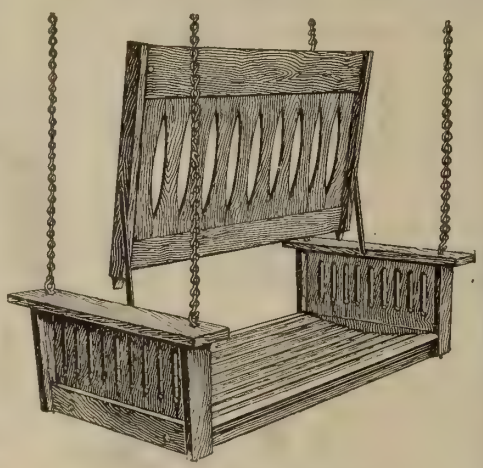

FIG. 1—Reversible Porch Swing.

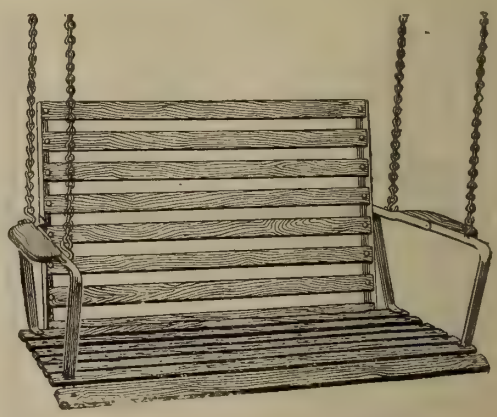

FIG. 2—Reversible Porch Swing.

A NEW ROLLER SKATE.

A patent has been solicited on what is unquestionably a novel idea in connection with a roller skate by Lee Richardson of the Richardson Ball Bearing Skate Co., 501 Wells street, Chicago. The new Richardson skate has but two rollers, but is so constructed that the same oscillating action is obtained as in connection with the Richardson four-wheeled skate, which has become so popular during the past few years.

The objection to all two-wheeled (or what are known as cycle) skates previously manufactured, was that the rollers were rigid on the foot plates, therefore making it impossible to describe curves and circles, while with the new Richardson skate, illustration of which appears herewith, the same movements and evolutions can be executed as easily as with the four-roller skate.

It is not expected that the new skate will displace the original four-roller Richardson skates for general rink use, but that it will be preferred by professionals and expert skaters for individual use, on account of its simplified construction and light weight. The rollers are aluminum, 2⅛ inches in diameter by 1¼ inches on the face, and are mounted on roller carriers with outside hangers which carry the axles, one end of roller carrier resting on a large rubber cushion which prevents all jar.

The new Richardson skate will be known as the Expert and will be ready for the market October 1.

Richardson Roller Skate.

Two enterprising Missouri druggists are giving away score cards with an appropriate line of base ball talk and a couple of catchy cuts advertising their soda fountain and perfumes and toilet articles. They will also present a silver trophy to the member of the local team getting the highest batting average. For this, "the store with the yellow front," yellow paper is used for circulars—with printing in red

OUR LETTER BOX

Correspondence on matters of interest to the hardware trade is solicited. Manufacturers, jobbers, retailers and clerks are urged to express their opinions on matters under discussion.

Any questions asked will be promptly answered. Do you want to buy anything, want some shelving, a silent salesman, any special line of goods, anything in connection with the hardware trade? Ask us. We'll supply the necessary information.

Geo. A. Stanley, hardware merchant, Lucan, Ont., writes asking for the names of manufacturers of bells. He wants to procure one weighing about 200 pounds.

Answer.—The Meneely Manufacturing Co., Troy, N.Y., and Peck Stow & Wilcor, 27 Murray street, New York, are very large manufacturers of bells. The James Morrison Brass Manufacturing Co., Toronto, make the smaller sizes up to about 150 lbs. in weight.—Editor.

* * *

W. H. Turnbull & Son, Brantford, Ont., writes asking for information regarding the size of cess pools for country houses along the line of the article which appeared in Hardware and Metal of August 11, by A. S. Atkinson.

Answer.—This matter will be dealt with in an article in the plumbing department of Hardware and Metal next week.—Editor.

DO A CASH BUSINESS.

There are two ways of doing business, a right way and a wrong way. Doing it the right way results in the survival of the fittest. It does not require a forecast of the finality when doing business the wrong way.

A series of articles appearing editorially and on this page, bearing directly on doing business on a cash basis have caused considerable comment and some action. Whole counties are considering the transformation. Merchants in many sections would shift instanter but for the fear that some trade might be sacrificed. It matters not how drastic the change, it is a fact that the old way of doing business will not meet the requirements of to-day and the merchant who continues to extend credits for a year or more, without interest, will sooner or later find the truth of this statement.

There is a way to do a cash business without insisting on immediate payment. Your jobber does a cash business. He gives you discounts for immediate payment, for payment after ten days, etc., and then after the maximum time on which goods are sold, you are forced to give bankable paper bearing interest to cover your account.

Every large manufacturing concern does a cash business, because on every sale made there is a stipulated time for payment and interest is made on deferred payments.

Every large city store does business on a cash basis and yet no small part of the trade of these stores is done on credit—but this credit differs from that demanded by the farmer. An agreed time for payment is arranged for, and the applicant for credit is investigated as to ability to meet obligations, past record, etc., while there is a distinct understanding as to the maximum amount of credit to be used.

Reputable people, and disreputable people, who had not been discovered in their favorite pose as dead beats, were given credit for any old amount and for any old time.

There was even no limit to the patience of the merchant. Moreover, the collection of accounts worried him not. If a debtor wanted to pay well and good, if not, why it made no difference, and he was as welcome to borrow the goods of the retailer as the cash customer who just happened in.

This habit grew and grew and paved the way for the retail mail order business. It was handicapping the cash customer for the benefit of the time and eternity debtor. It disgusted men with money ready to pay their way to find that the slow and never-paying customers were just as welcome and received the same prices that they did.

The retailers with their limited stocks and with their own slow ideas were moving along slowly, when they awakened to the fact that they had aggressive competitors in the big mail order houses. The difference between the catalogue houses' price and their own startled them.

Many changed quickly to the cash basis. Cash or bankable paper after 30 days. Some to cash outright. Find one of the firms that changed that would ever go back to the mixed method.

We are at the very crest of the catalogue retail trade wave. It will go backward or forward from this time on. It is up to the retailers of this country to give the movement a good swift kick.

You can meet catalogue retail competition only in one way. Do business on as near a cash basis as possible, and above all things have a limit to credit and a date for payment of accounts. The more people who cut out time and eternity credits, the less powerful the mail order competition. There should certainly be a difference in the price of goods sold for cash and on goods sold to be paid for in six months, a year, two years or—perhaps. The nearer a straight cash business you do the better, and there is safety, satisfaction, security and surplus in it, with assurance against the coming of the sheriff. There will be no creditors.—The Hardware Trade.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

FOUNDRY AND METAL INDUSTRIES

United States statistics show that Canada and Newfoundland imported only 58,632 tons of steel rails from that country for the fiscal year ending June 30 last against 164,041 tons in 1905.

The Dominion Coal Co. reports a falling off in the output of the mines, due, in part, to an exodus of the company's employes to the west and to other companies. The situation has been partially relieved by the arrival of miners from the Old Country.

It is said that a well-known Pittsburg Co. intends going into the electric smelting industry in Canada at some point where power can be obtained at minimum rates. Plans are also being laid for the establishment of electric smelters in Mexico and the United States.

During July the dominion Copper Co. smelted 18,000 tons of ore, also 404 tons of matter carrying 44.6 per cent. of copper, which, with gold and silver value, gave a gross value for the month of $86,000. It is expected that during August the total smelter treatment will be $160,000.

The British Columbia Copper Co. has received one of the three mammoth furnaces which it is installing at the smelting works, and it is now on its foundations. The other two will follow soon from Milwaukee, where they are being manufactured. The improvements at smelter and mines will cost about $400,000.

The first steel car ever manufactured in Canada was delivered to the C.P.R. last week by the Dominion Steel Co. The car was entirely constructed at the new plant erected outside of Montreal, and the company has contracts to deliver 500 of the steel cars to the C.P.R. just as fast as they can be turned out. The cars are used for the transportation of minerals and coal in Western Canada.

Regarding the Canadian steel and iron bounties, the Ottawa correspondent of the London Economist, who is generally credited with knowledge of Government policy, says: "Bounties to manufacturing industries are becoming a serious charge. Some of them will expire shortly, but are sure to be renewed for another term. A single industry in Nova Scotia seems to have been paid $2,500,000 in bounties in the last six years; this is over and above the tribute it exacted from the consumer through its protective duties."

ROLLING MILLS FOR SALE.

The new bar iron rolling mill recently erected at Winnipeg, is announced for sale by T. M. Kirkwood on another page in this issue. Mr. Kirkwood is the late owner of the Belleville Iron & Steel Rolling Mills and in his advertisement makes a novel proposition to western hardwaremen as well as outlining the possibilities of developing the new plant.

MALLEABLE IRON.

Malleable iron is the very highest grade of grey iron submitted after casting to an annealing process. In this process the carbon which makes cast iron so brittle is burned out, and all other impurities are eliminated, thus giving it greater tensile strength than any other form of iron. It is pure iron and can be stretched, doubled, hammered and twisted without breaking. To anneal these castings are placed in an immense sealed oven and are given heat for sixteen days. Many castings are rejected because they are found defective when removed from the ovens. It is this unavoidable loss that makes malleable construction so unpopular with those makers who are willing to sacrifice quality to profit. Those castings found true as to quality are fashioned back into their original shape (which in annealing is almost entirely lost) by huge drop hammers and by hand. It is a strange and interesting sight for those not familiar with malleable construction to see the way in which the tops, anchor plates, frames and doors are hammered into fitting shape. A blow with a fraction of the force used on malleable iron would send cast iron ringing into a thousand pieces, because cast iron is so brittle.

Brighten Up

The Sherwin-Williams Agent does not find the Fall time a dull painting season, as so many agents do. It presents for him many opportunities for sales and profits. He develops and secures the trade of his locality.

There is a reason for his prosperity. It's this—

The Sherwin-Williams Co. is behind him in every effort to go after business. We work with him and for him to promote sales and make his line better known. This Fall, for instance, we have prepared a special "Brighten Up" Campaign. It includes many trade winning features and is absolutely free to the agent. All we ask is that he give us his co-operation and enthusiastic support. We do the rest—and he gets results.

The Sherwin-Williams Line backs up the agent's publicity. Every paint and varnish in it is as good as can be made. His sales stay sold. He gives the greatest value and best satisfaction.

There's food for thought in this. If you are one of those "other line" agents who find sales slow and the Fall time a "Dull" time instead of "Brighten Up" time, let us hear from you. Our proposition will interest you.

PAINT GUARANTEES.

In discussing the subject of paint guarantees a successful American manufacturer whose factory has been in operation since 1835 says that no guarantee of durability can be given on paint for any definite number of years by any manufacturer unless the price includes a certain percentage for the purpose of establishing a reserve fund to meet the cost of indemnity in case of failure non-attributable to the quality of the paint, or a desire to lose the cost of indemnity for the purpose of advertising. The only guarantee he would give is that if properly applied, under proper conditions and on a proper surface, that his paints would outwear any other brand. He writes:

"How can a manufacturer guarantee his paint without the former qualifications? Is he certain that it will be employed as it comes to the hands of the users? No! Very frequently the paints are changed in character by admixtures after leaving the factory, and these admixtures, even with the most laudable intent, may prove detrimental to the life of the paint. Is the manufacturer certain that the paint has been properly stirred? Is he certain that the previous coat was dry before the succeeding one was spread? Has the paint been brushed out nicely, or has it been applied too thick? These are but a few of the possibilities that will make a paint go wrong. Therefore no manufacturer can guarantee his paints for a definite period without qualification.

"We have given our guarantee and have had no trouble in selling our paint. Very rarely do we have a complaint, and when we have one we find, upon investigation, that the paint is not at fault; but even so we deem it, as a matter of policy in rare cases to furnish paint to repaint jobs that have gone wrong through no fault of the paint. This loss we pocket usually as a matter of policy and a courtesy to our agent.

Analysis of Composition of Paints.

"Twenty-four per cent. of water as part of the vehicle in the paint of a certain mail order house does not augur well for durability. We prefer straight linseed oil with the necessary turpentine drier.

"The pigment end in the composition of a paint is a question which most manufacturers have decided for themselves, the decision being based in some cases upon researches, in others to meet popular prejudices, and again in others to conform to assumed standards of law. In the latter case, granting (what we will not concede) that law makers are the best paint makers.

"Barytes 'per se' does not make good paint, nor does an immoderate use of it produce the best paint—paint good in all respects.

"We contend, however, that barytes discreetly used in connection with oxide of zinc, does make the best paint. It covers amply and is more durable than any other in the market. More durable, because barytes does not affect the 'life' of the paint, viz., the linseed oil.

"Oxide of zinc, the strongest tinting white pigment known, requires too much oil. We mean that oxide of zinc, to render it spreadable, requires so large a volume of linseed oil that its capacity is impaired, and that by adding an inert substance like barytes, which takes a much lesser quantity of linseed oil, we form a pigment surpassing the capacity of white lead. We mention white lead because that pigment is advertised by its manufacturers as being the ideal house paint, all others being excluded."

VARNISH IN GREAT BRITAIN.

The weekly report of the Trade and Commerce Department issued August 6, contains an item from P. B. MacNamara, the commercial agent at Manchester, Eng., which will be of interest to the trade. The report says:

"The British trade and navigation returns do not classify varnish, hence I am not able to furnish the quantity imported and its value, but I am informed by a dealer that the quantity is quite large, and that Germany contributes somewhat to the amount for inside purposes only. Oil varnish is chiefly used, but there is a demand for spirit varnish also. There are many varnish manufacturers in England, but the dealer is always glad to supplement his source of supply provided he can effect a saving thereby. There is a difference in the nature of the varnish used in the North and South of England, owing to climatic conditions, and that which is chiefly used in the former would not be used in the latter part of England, it being said that it cracks when exposed for a not very long time, hence it would be necessary that the Canadian manufacturer wishing to establish a connection here, would make a varnish to suit the conditions of the country. A connection could not be made by correspondence only as samples would be required."

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Aug. 17, 1906.

Orders coming in during the past week have shown that the statement in our last issue regarding the very healthy condition of the paint and oil trade was freely verified.

In spite of the intensely hot weather which has prevailed in every part of the country, the consumption of all paint materials is remarkably good.

Prices remain steady and the only probable change in the near future is in turpentine. In the southern markets a number of fluctuations have transpired of late, but the Canadian trade is not following them very closely. A quick advance was recently made, but it was followed by a slight reaction. On the whole, however, the present situation would indicate that Canadian prices on turpentine will have to be advanced very soon.

LINSEED OIL — Present conditions make for a very steady market. Our quotations are as follows: Raw, 1 to 4 barrels, 52c.; 5 to 9 barrels, 51c.; boiled, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.

TURPENTINE — Market experts are predicting an early advance. Meanwhile we still quote: Single bbl. 86c. per gal.; two barrels or over, 85c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC— The market remains unchanged at following prices: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD—Conditions are unchanged since last report. Prices remain as follows: Genuine red lead in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

GUM SHELLAC—Prices remain unchanged as follows: Fine orange, 60c. per lb.; med. orange, 55c. per lb.; bleached shellac (white) 65c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—The market is on the quiet side. Our quotations are as follows: Firsts in cases, 8 1-2c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

GASOLINE—The ruling quotation at present is 24c. in bbls.

BENZINE—There is nothing new this week and we are still quoting 20 1-4c in barrels.

WINDOW GLASS—A good demand is maintained, and prices are steadily held, as follows: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.95; third break, 100 feet, $4.25; fourth break, 100 feet, $4.50; fifth break, 100 feet, $4.75; sixth break, 100 feet, $5.25; seventh break, 100 feet, $5.75; eighth break, 100 feet, $6. Diamond star, first break, 50 feet, $2.05; second break, 50 feet, $2.25; first break, 100 feet, $3.90; second break, 100 feet, $4.30; third break, 100 feet, $5.25; fourth break, 100 feet, $6; fifth break, 100 feet, $7; sixth break 100 feet, $7.50; seventh break, 100 feet, $8.50. Double thick, first break, 50 feet, $3.20; second break, 50 feet, $3.50; first break, 100 feet, $6.25; second break, 100 feet, $6.50; third break, 100 feet, $8.25; fourth break, 100 feet, $9.50; fifth break, 100 feet, $11; sixth break, 100 feet, $12; seventh break, 100 feet, $13.50; eighth break, 100 feet, $16; ninth break, 100 feet, $17.50; tenth break, 100 feet, $19.50; eleventh break, 100 feet, $23.50; twelfth break, 100 feet, $28.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Aug. 17, 1906.

As was expected turpentine has been advanced again, quotations for single barrels being now 87 cents. There is a decidedly firmer feeling in turpentine, and indications are that prices will be maintained for a while.

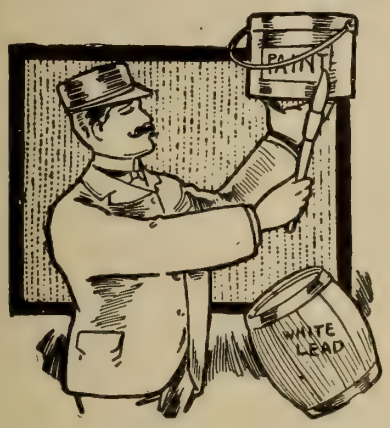
Linseed oil is quoted at 1 1-2 cents higher across the sea, but locally there are no changes and the market is steady.

As reported last week, a Toronto house is making a big cut on white lead.

In a Quality Class of Its Own
In a Selling Class of Its Own

There you have

MAXIMUM LIGHT GLASS



the only daylight-increasing window-glass combining lenses and prisms. You must not confuse **MAXimum LIGHT GLASS** with ordinary corrugated or prismatic glass. You can form some estimate of the sales of **MAXimum LIGHT GLASS** when you are told that in two months' time over 8,000 windows were placed in buildings in London, Eng. Contractors and builders write us for particulars, and, of course, we refer them to the dealer in their town. We want the dealer to write us and then to sell the glass to the contractors and builders.

We Should Like to Hear from You.

CRUDE PETROLEUM— We quote: Canadian, $1.38; Pennsylvania, $1.64: Ohio, 98c.

It is more profitable and satisfactory to sell high grade goods than cheap stuff. Talk quality always.

SPECIFICATIONS FOR OILS.

The lubricating oil business is passing through various changes with regard to the manner in which it is conducted by the buyer. Time was when he contented himself with saying that he wanted a cylinder oil, or a loom oil, or a shafting oil, as the case might be, leaving it with the dealer to supply what in the latter's opinion was a suitable oil. The dealer would of course take into consideration the kind of machinery used by his customer and the price which he would be ready to pay. This latter was by no means an unimportant matter, for it largely governed the quality of the oil which was supplied. If the oil sent did not suit the buyer, then perhaps a fresh oil merchant would be tried. Sometimes a buyer would get price quotations from several dealers and choose either the lowest priced oil or whichever he thought would suit him best. As to stipulating for this or that gravity, or a particular viscosity and flash-point, it never occurred to him; but the dealer, by laying particular stress on these points to show the superiority of his oils over his competitors', has educated his customers up to requiring that the quality of the oil supplied shall be defined by certain of these points.

The fire insurance companies have also had a considerable influence in the same direction, for they have paid attention to the character of the oils used in large mills for lubricating the machinery, and have laid down certain minimum qualities they shall possess. There are still buyers who take no notice of such things; but there are others, especially railway companies, corporations, etc., who lay down somewhat strict specifications as regards the qualities of the lubricating oils to be supplied to them. This is, perhaps, not to be wondered at, having regard to the spread of knowledge as regards oils; nor is it generally a thing to be regretted.

The difficulty is that the preparation of the specifications is not done in a systematic manner; no two are drawn up exactly alike, and if the buying company keep a chemist of their own there is a tendency to be somewhat over-particular in the provisions of such a specification, not having regard to the commercial side of the question, and whether the test is really a practical one or not. One buyer specifies that his oil shall stand a current of air at a high temperature. Another wants an oil to stand a very high temperature for a long period of time. Then some want an oil to stand an exceedingly low temperature, not becoming turbid. We rather fancy that in all these cases the buyer has a somewhat exaggerated idea of the conditions his oils have to meet; he also fails to specify how these requirements are to be experimentally carried out. Then there are questions concerning viscosity; some buyers test their oil at one temperature, others at another; some seem to like what can only be considered fancy temperatures not attainable in practice, or even necessary in testing oils. We think oil dealers should bring some pressure to bear on their customers who employ specifications, with a view to seeing that they are rationally drawn up, and the conditions are such as may be easily tested by well known and defined methods.—Paint, Oil and Drug Review.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

The Calgary Cement Co's plant has been destroyed by fire. The loss will be $100,000.

The Manitoba Frost Wire Fence Co. will build a factory and warehouse in Winnipeg.

Southampton ratepayers voted by-laws to lend $15,000 to a furniture company, $10,000 to Sol Knetchel for a machine shop; $5,000 to Chas. Williams for a grist mill.

A Pennsylvania steel forge company is negotiating with Toronto civic officials for a two acre foundry site on Royce avenue. Fifty men will be employed if the industry is established.

The Deparment of Public Works Ottawa, calls for tenders for lock and dam on St. Andrew's Rapids, Winnipeg.

The Standard Bank of Canada will open a branch at Belleville.

The Montreal Light, Heat & Power Co. will erect a power house at the Soulanges Canal, forty miles from Montreal.

The St. George Pulp & Paper Co., of St. George, N.B., had their mill destroyed by fire. Loss $25,000.

Port Arthur is to have a Dominion De Forrest station for wireless telegraphy.

The City of Brandon and the Great West Power & Machinery Co. have come to a deadlock in their negotiations owing to inability to provide a site.

Woodstock, Ont., will on Sept. 12, submit a by-law providing for a loan of $25,000 to the Canadian Bearings Co., of Hamilton. The company agree to erect three buildings at an expenditure of $10,000, and to install machinery worth $30,000. They will employ at least fifty men.

The preliminary arrangements for the Electrical Trades Exposition in the Fall of 1907 were made at a meeting of Montreal firms interested in the proposition, which took place this week. Five thousand dollars, a sum larger than will be required for the preliminary work, has already been subscribed. At the exposition there will be exhibits of all electrical apparatus, as well as that of allied trades.

The Quebec Railway Light & Power Co., finding that its power from Montmorency Falls proves inadequate at certain times, has entered on an extensive development about half a mile higher up the river. To provide for the season of low water the company has erected there, according to the plans of E. A. Evans, chief engineer and general manager, a dam 84 feet high, the highest in Canada, for such a purpose. It is 67 feet 4 inches wide at the base and 12 feet wide at the crest and will hold back 52,000,000 cubic feet of water.

H. W. Buck, the well-known electrical engineer at Niagara, contributes to the Outlook some interesting data on Niagara power. The total available water of the falls, says Mr. Buck, would represent about 3,500,000 horsepower. To generate one horsepower continuously for a year by a steam engine requires about thirteen tons of coal. To generate, therefore, continuously 3,500,000 horsepower by steam would require about 50,000,000 tons of coal per year. To generate electric power by steam with the most modern steam plant costs not less than $50 a horsepower a year, allowing for fixed charges and operating expenses. Niagara power can be generated and sold in large quantities for $15 a horsepower a year, or for $35 a horsepower a year less than is possible from the use of coal and the steam engine. From the above it will be seen that if all the hydraulic energy of the Falls were utilized for power purposes there would result to the country an annual saving of $35 a horsepower or 3,500,000 horsepower or $122,500,000, and in addition there would be an annual saving in coal consumption of 50,000,000 tons. These figures illustrate what it costs the people of this continent annually to maintain Niagara Falls as a spectacle. They represent the saving of those who would consume the power and not the profit of those who might own the power developments. This waste involved in prohibiting the development of Niagara power might be likened to a great conflagration in which 50,000,000 tons of coal were annually consumed. Such a conflagration might be one of the most magnificent sights in the world, and people might come from all parts to view it, but the human race would certainly be justified in using every effort to stop the waste by putting out the fire Moreover, it does not follow that even a very extensive use of the power will mar the beauty of the falls.

BUILDING NOTES.

Vancouver will erect a $6,500 fire hall.

Glace Bay, N.S., will build a $15,000 school.

Regina Methodists will build a $6,000 parsonage.

Thos. Fanning, Hamilton, will build a $4,300 house.

The Home Bank of Canada will build at Winnipeg.

Wallaceburg, Ont., will build a Carnegie library.

J. M. Brooks will build a hotel at Peterborough.

J. C. Drinkle, of Saskatoon, is building a $10,000 home.

Bull & Snell will erect a $40,000 elevator at Yorkton.

The Williams Piano Co. will build an apartment house in Toronto.

Vancouver issued $100,000 in permits in four days last week.

Knox church, Toronto, calls for tenders, all trades, for new edifice.

A new company called the Suburban Homes, will erect houses in Toronto.

Sussex, N.B., school trustees ask for tenders for a brick and stone school.

The estimates are that Saskatoon will have half a million dollars expended in building this year.

Dixon Bros., Campbellford, have been given a contract for the erection of a steel bridge for the Mattawa River, to cost $20,000.

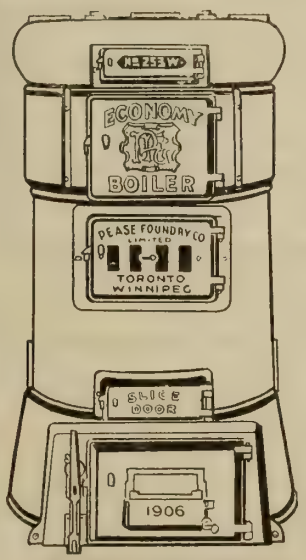
CONCRETE: ITS RISE AND ITS APPLICATIONS.

The history of concrete dates back to the Roman period, and its growth seems to have followed and is proportional to the growth of the Portland cement industry. The word "concrete" to engineers and contractors has a very definite meaning, but to those not familiar with the subject, the word "concrete" often suggests a "tar sidewalk." Concrete is a substance composed of broken stone, sand, and cement, or sand, gravel, and cement mixed together with water in certain well-defined proportions determined by experience. The resulting mixture is a pasty, jelly-like substance, which can be placed in excavations or box-like forms and allowed to harden or "set," as it is called. In the course of twenty minutes or a half hour it will have undergone what is called the "initial set." In other words it changes its physical condition from that of a semi-fluid to that of a solid, and while it is not then hard it is a solid. The hardness of the "permanent set" will depend on many things. With good cement this hardness will grow with age, and there are some cements which show from tests a continual growth in strength and hardness for many years. There are many cements called "quick-setting" cements which take on a permanent set in a short time and show a high strength but it has been determined by experience and tests, however, that quick-setting cements are not so good or staple in the end as the slow-setting article, which grows in strength indefinitely.

With the increased production of Portland cement the use of concrete has been rapidly growing and to-day it is simply a question of expense, as concrete masonry can be built for very much less than stone masonry, the result being the

BOILER NIPPLE HISTORY

In 1901 the Pease Company placed on the market the "Economy" Boiler, with nipple-connected sections.



* * * * * * * * *

It was the first Boiler of that type to be placed on the Canadian market.

* * * * * * * * *

Do you remember how the manufacturers of old-fashioned rubber-gasket-connected boilers ridiculed the idea?

* * * * * * * * *

THIS BOILER HAS STOOD THE TEST OF TIME

Have you noticed that the ridicule of 1901 has changed to the praise of nipple-connections in 1906?

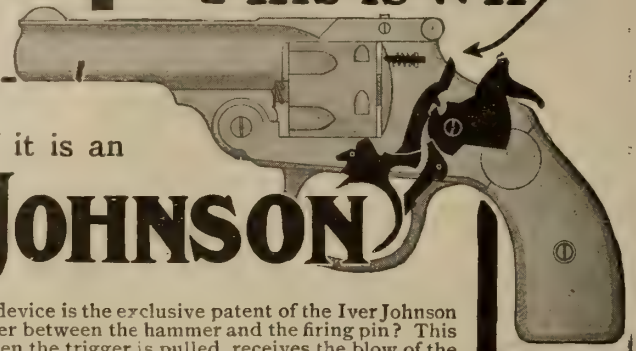
* * * * * * * * *

Of course, there are differences in nipples and nipple-connections and the "Economy" Boiler nipple-connection is different from all others. We can show you why it is better, too

* * * * * * * * *

But the nipple connection is only one of the many good features of the "Economy" Boiler—features that are modern and attractive and that appeal to common sense and good judgment, and that make it easy for you to sell the Boiler and make a life-long friend of your customer in doing so

* * * * * * * * *



Now, would it not be worth your while to have a catalogue?

It costs one cent (post card) to get it and it starts the day your request is received.

PEASE FOUNDRY CO., Ltd., TORONTO

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

marked displacement of the latter. It is used at the present time for making dwelling houses, factories, chimneys, dams, water tanks, railway ties, and fence posts. In fact, it is hard to name a structure in the present day that has not been built of concrete. The introduction of armored or reinforced concrete has still more widened its field of usefulness.

CONCRETE PRESERVES METALS.

That concrete preserves iron and steel and prevents it from rusting at all, even though it be partly rusted when imbedded in the concrete, is proven by two interesting experiments made by the Boston Transit Company during the construction of the East Boston tunnel.

Nine strips of sheet iron, 2in x 6in., were cleaned till bright and free from rust and imbedded in a hollow cylinder of concrete, 14 in. x 20 in., outside dimensions, the walls being 3 in. thick. When hardened this cylinder was kept filled with water and placed in the tunnel. For a while water percolated through the concrete readily, but at the end of two months it had become watertight. At the end of two years the nine strips were removed and found to be as free from rust and as bright as when placed in the concrete cylinder.

In the other experiment a badly rusted square plate was cleaned by filing so that its general surfaces were bright, but rust remained in many small pits. This was imbedded in a block of concrete, placed in water for two days and then dried in air several days. This wetting and drying process was kept up for two years, when the plate was removed. Its condition was the same as when placed in the concrete except that the composition of the old rust had changed some so that its color was yellow instead of reddish brown as formerly.

BUILDING BOOM AT HALIFAX.

Halifax has been experiencing somewhat of a building boom during the past Summer, a few of the buildings under construction being as follows: Bruce L. Stewart, residence, $2,000; E. Gibson, dwelling, $2,800; W. and C. H. Mitchell, offices and stores, $5,000; Davis & Fraser, new building, $12,000; J. McInnis & Son, building, $3,000; Major Palmer, residence, $3,000; Kaulbach & Schurman, college, $25,000; Provincial Exhibition Board, additions, $11,000; Mrs E. M. Casey, alterations, $2,000; G. Vaughan, residence, $1,500; S. A. Hiseler, residence, $3,500.

A special sale cannot be built on a foundation of hot air. You must have some real bargains to offer, and you must spend some money in advertising them. A few lines in an obscure corner in the newspaper will not do. Go about it as though you meant it—and mean it, too. Get up lots of enthusiasm and enthuse everybody about the store.

BUSINESS CHANCES

$3,000 will buy a good hardware, plumbing and heating business in the prosperous city of Sherbrooke. Owner wishes to retire. Apply Box 107, Sherbrooke, Que. [tf]

HERE is what you want—a tinsmithing and plumbing business in sunny Alberta town, with 1,200 population; no opposition; $3,000 will handle business; lot and building 14 x 36; last year's business $8,000; act quick, good reason for selling. Address, S. Case, HARDWARE AND METAL, Winnipeg. [35]

SITUATIONS VACANT

WANTED—Four first-class tinners; must be sober and steady. Apply stating wages to Drawer 00, Edmonton, Alta. (33)

THREE first-class tinsmiths, with experience on furnaces, steady work, good wages for hustlers. Ralph, Morris & Ella, Ltd., Vancouver, B.C. [34]

HARDWARE salesman wanted, one who thoroughly understands hardware, must be good stock keeper and window dresser, state age, experience and salary required. Box 548, HARDWARE AND METAL Toronto. [34]

WANTED—Hardware salesman with about four years' experience. Write at once with references. Good position for the right man. Apply to The Bond Hardware Co., Limited, Guelph, Ont. [33]

WANTED—A junior hardware clerk with two or three years' experience. Apply by letter, stating age, salary expected, references, etc. H. H. Otton & Son, Barrie. [tf]

FOR SALE.

New Rolling Mill for Sale at Winnipeg for Manufacturing Bar Iron and Steel.

ONLY mill west of Ontario. Wrought scrap iron is the raw material. Up to now all raw scrap iron had to find a market with Eastern mills on a freight of $6.50 ton, and bar iron is shipped west on a freight of $13 ton, $19.50 ton in favor of this mill. This mill can produce bar iron at a cost of $27 ton, which sells to the Retail hardware trade at $50 to $54 ton at Winnipeg.

Twenty tons per day will net you a profit of $138,000 per year, price $69,000, $5,000 cash and balance to be paid out of earnings in one or two years, 6 per cent. interest; $20,000 will be ample as a working capital. If preferred will lease mill for $7.50 ton on output; have skilled superintendent and labor to operate mill on hand.

This is an excellent chance for the Western Retail Hardware Association to acquire this mill and manufacture their own bar iron, then they control the western iron trade, 300 members subscribing only $100 each will total $30,000, enough to get possession and leave $25,000 as working capital and pay for the mill out of the earnings.

All members of the association should take this up with their president or secretary at once, bearing in mind that the earnings will pay for the mill in less than one year, and that the cost of manufacturing bar iron will not exceed $27.00.

T. M. KIRKWOOD,
165 Lowther avenue, Toronto.
Late owner of the Bellev lle Iron and Steel Rolling Mills. (34)

BATHROOM FIXTURES

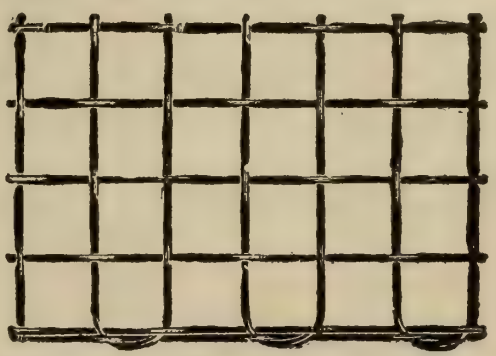
GIVE PERMANENT SATISFACTION

No. 185—Tumbler Holder

This tumbler holder is a beauty, with solid beaded edge and inside tumbler support.

Our Catalogue shows some cheaper ones; but the only difference is in construction.

The quality and finish of all our goods are first-class.



We want you to have our Catalogue "B2" for referehce.

THE CARRIAGE MOUNTINGS CO., LIMITED

TORONTO

MADE IN CANADA CPMC TORONTO

WIRE CLOTH

Special Regalvanized Cloth for Apple and Fruit Drying.

Stock widths—24-30 and 36 inch. Other widths and meshes made to order.

Also ½-inch Galvanized Netting. Stock widths—24-30 and 36-inch. Stock lengths—25 and 50 yards.

Also Wire Cloth and Netting for all purposes.

THE B. GREENING WIRE CO.

LIMITED

HAMILTON, ONT. MONTREAL, P.Q.

THE STANDARD IDEAL SANITARY CO., LIMITED

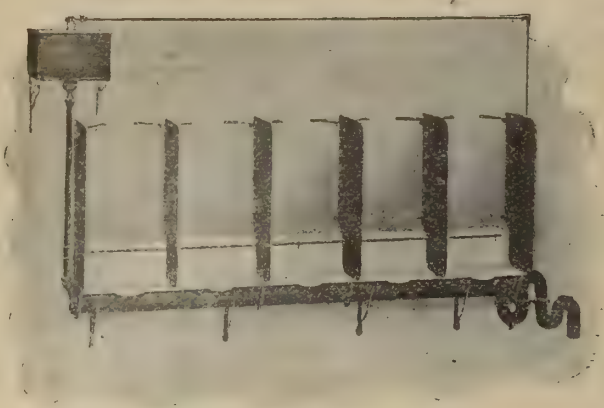


Plate E. 404.—For Public Institutions, Schools, Factories, Asylums, &c.

We manufacture a complete line of

Range-Closets, Range-Urinals, Lavatories and Sanitary Fixtures

Suitable for Public Institutions

The reputation of our goods is unequalled.

Toronto: 50 Colborne Street ***Montreal: 128 Craig Street West***
Winnipeg: 24 Telfer Building

HOME OFFICE and FACTORIES: PORT HOPE, ONT.

VALVES AND INJECTORS

J.M.T. VALVE
Made in all the different valve patterns

When you offer your customer an Injector submit to him a machine that has a reputation for efficiency and durability.

The ***J.M.T. Injector*** has proved its superiority by the ever increasing demand for this High-Grade Boiler Feeder. It costs no more than the ordinary kind.

Thousands in use.

Sold by all jobbers and the better class of dealers.

J.M.T. Injector

J.M.T. Valves are used where the best valve obtainable is desired, because they're carefully constructed of highest grade material and workmanship, and give that lasting satisfaction so much desired by steam users. Made in heavy and extra heavy pattern—with Jenkins or Copper Disc, for high pressure.

For sale all over the Dominion.

THE JAMES MORRISON BRASS MFG. CO., Limited, 89-97 Adelaide Street West **TORONTO**

Manufacturers of HIGH-GRADE STEAM SPECIALTIES.

PLUMBING AND STEAMFITTING

APPRENTICESHIP COMMITTEE REPORT

Read at the Nat'onal Master Plumbers' Association Convention at Ottawa last week.

Your apprenticeship committee, appointed at your last annual meeting held in Winnipeg, beg leave to submit the following apprenticeship agreement for your approval.

This agreement made and entered into this ..... day of ....., 190.., by and between.....of the city of ....., party of the first part and .....of .....party of the second part and.....of..... parent or guardian of said.....party of the third part.

Witnesseth, that the said party of the second part hereby agrees to well and faithfully serve an apprenticeship with the party of the first part hereinafter mentioned, the term of said apprentice ship to be five years.

And the party of the third part, in consideration of the said party of the first part receiving the said party of the second part as an apprentice and the execution of this agreement does for himself, his heirs, executors and administrators, covenant and agree to and with the said party of the first part that the party of the second part shall in all respects well and faithfully serve the party of the first part and perform such work and duties as the party of the first part shall direct him, said party of the second part to perform during the entire term of this agreement.

In consideration whereof the said party of the first part agrees to instruct the said party of the second part in the.....art of trade, and to pay to the said party of the second part the following wage:

For the 1st year.....dollars per week.
For the 2nd year.....dollars per week.
For the 3rd year.....dollars per week.
For the 4th year.....dollars per week.
For the 5th year.....dollars per week.
For the 6th year.....dollars per week.

If the said party of the second part shall lose any time during any year of the said term from any cause whatsoever not the cause of the first part, such lost time shall be made up by said party of the second part before he shall be considered as entering upon his next succeeding year of service and the date of beginning each year of said term of service and on which he shall begin to be entitled to the compensation provided for that year shall be the day when any time so lost by the said minor during the last preceding shall have been fully made up by him.

And it is further agreed by all parties to this agreement that the party of the first part shall create a fund out of which the party of the firs' part will pay at the completion of the said term of apprenticeship to the said party of the second part the sum of one dollar for each week's work fully performed by said party of the second part under the terms of this agreement.

And it is expressly understood and agreed that should the said party of the second part be discharged at any time for failure to obey the said party of the first part or his or their proper agent or manager, or should he fail or neglect to well and faithfully serve the party of the first part during the entire period agreed upon for his apprenticeship, or should he fail, neglect or refuse to perform the terms and conditions of this

Delegates and their Lady Friends—National Master Plumbers' Association Convention at Ottawa, August 7, 8 and 9.

agreement in any respect whatsoever, that then and in either case aforesaid he shall not be entitled to receive any portion of the said fund and this agreement to pay said sum or any portion thereof shall be of no effect and it shall then be returned to the party or parties who paid it in. In no case whatsoever shall the premium hereby agreed to be paid be considered as wages.

And it is further agreed that should the party of the first part discontinue business, having in his employment such apprentice herein set forth as the party of the second part, the party of the first part shall transfer said party of the second part to any other masters engaged in the same line of business, and said transfers may continue to be made thereafter under the same condition until the full term of apprenticeship has terminated, and the party of the second part hereby agrees and consents to being so transferred.

If for any reason the party of the first part or any succeeding masters to whom the party of the second part may be transferred is unable upon his retiring from business to procure employment for the party of the second part with any other master, there shall be paid to the said party of the second part any money due him from the said fund at the rate of one dollar a week as aforesaid and issued to him a certificate stating the length of time said party of the second part has served as an apprentice and the reasons for the said party not having served his entire apprenticeship.

During the term of apprenticeship of the party of the second part as therein set forth the party of the first part while said party of the second part is in his employ and each successive master thereafter while said party of the second part is in his employ, shall deposit weekly with the secretary of the Master Plumbers' Association, one dollar for each week's work performed by the party of the second part. On the termination of the organization of the Master Plumbers' Association or on its refusal to longer receive such fund, then the parties hereto shall select a trustee to hold the funds already paid under this agreement to the Master Plumbers' Association and to receive all additional deposits which shoould be made after the said termination of organization or refusal to hold. It is expressly understood and agreed that after the party of the first part has made the said deposits of one dollar per week to the said Master Plumbers' Association or to its secretary or to any other person selected or chosen to hold the same, that the said party of the first part shall be free from any liability whatever, caused by the failure or neglect of the said party or parties to properly pay over the same to the party of the second part.

In case of any grievance arising between the party of the first part and the party of the second part said grievance in the event of the parties failing to agree shall be laid before a committee composed of the executive board of the .....who shall hear and determine the same and the decision shall be final.

In witness whereof the said parties have hereunto set their hands and affixed their seals at.....this..... day of.....190..

.....
Party of the first part.
.....
Party of the second part.
.....
Party of the third part.

In the presence of
.....
.....
.....

The "Bunch" that Represented Ottawa at the National Plumbers' Convention at Ottawa last week.

Certificate.

To whom it may concern. Greeting:

This is to certify that ..... has well and faithfully served his term of apprenticeship and has complied with all the terms of this agreement as herein set forth.

In witness whereof I have set my hand and affixed my seal this.....day of.....190..

.....

All of which is respectfully submitted.
Committee.

(Sgd.) Chairman, John Watson.

The part of the president's address touching on the Winnipeg strike brought forth some comment, and the reading by Mr. Gordon of the demands asked by the striking plumbers, which were extreme in many respects.

The report of the delegates to the National convention at Atlantic City in June was received and listened to with interest by the delegates.

Wednesday afternoon the visiting plumbers were the guests of the Ottawa plumbers and enjoyed a trip to Rockcliffe Park, around the loop and thence by steamer from Britannia to Aylmer, where at the Victoria Hotel they fared sumptuously. After dinner was served the visitors strolled around the park followed their own pleasure, which was more satisfactory than any scheduled programme as the weather was hot.

CARE OF HOT WATER BOILER.

When a hot water heating plant is put in disuse for the Summer months, the system should be left full of water, in order to exclude the air from the inside of the boiler, radiators and pipe system, to prevent corrosion.

The smoke pipe should be disconnected from the chimney flue, and the fire and flue surfaces thoroughly cleaned.

Let the fire and flue doors stand wide open, so that the water within the boiler and the surrounding atmosphere may equalize in temperature, which will prevent sweating or condensation on the outside, and reduce to a minimum the corroding effects on the fire and flue surfaces, due to acid, resulting from a union of soot and moisture.

If the water used is clean and free from mineral and vegetable matter, it will not be necessary to empty the system oftener than once in two or three years, or even longer. Should the water be impure and charged with vegetable matter, the system should be emptied every Fall, and refilled before starting a fire.—From How to Heat the Home.

SANITARY CLOSETS.

The Red Cross Sanitary Appliance Company, Winnipeg, have an indoor closet specially adapted to towns where there are no sewerage systems. It consists of a tank set below the floor line, on top of which the bowl is placed. It has an antiseptic tank containing chemicals which decarbonize the solids and made the closet odorless. The tanks are said to require emptying only three or four times a year.

SHOULD A MASTER PLUMBER HANDLE TOOLS?

By Frank H. Patterson, Springfield, Ill.

How often have you probably asked this question of yourself? There has never existed in former years an epoch, when this question might seem of as much significance as now, and when this statement is made, you ask, why?

The age in which we are now living is said to be the age of "money mad." Every avenue of industry, every profession, every mercantile business is being weighed, scrutinized, dissected and statistics and information are sought for by all persons who are eagerly and industriously fighting the battle of life. Now, if you observe carefully you will find the old order of things "turned topsy turvy." Years ago, and not many either, it was almost an unheard of occurrence that any man should have the audacity to engage in the plumbing business unless he were a practical man; one who had served an apprenticeship and had several years to his credit as a journeyman.

You would no doubt be greatly surprised to learn of the large number of master plumbers now in the United States who, when they first embarked in the business, knew practically nothing of it, but in the main were far-seeing and shrewd business men and possessing the essential requirements to manage a business, and they have, as a rule, made a success of it. These same individuals would probably have been successful if they had invested their capital and business ability in the dry goods, hardware or shoe business. Now, these men are not practical plumbers and never will be, but they command your respect. Why? Because they are a success and no man who fails in business can merit the respect and wholesome regard of his fellows in the same measure as the lucky fellow who wins.

Now, this brings the main subject forward again. How often have you seen the plumbing shop with a slate hung on the outside of the front door, with the well-known heading printed thereon, "Leave Orders Here." Some one calls and wishes to talk with the proprietor about certain conditions of the plumbing in his home; it is not a case where he wishes to leave an order; it is a case of consultation. Well, he finds the door locked; he grumbles and seeks another establishment down the street where he finds the proprietor in and ready to talk to him in reference to his work, the first place he visited was run by a practical plumber, but he was out at work; this next place he called was run and operated by a plain business man who was not capable of handling tools but knew the business theoretically and employed mechanics. The result was, that the customer left his order to have his work remodeled; this same master plumber succeeded.

The practical plumber worked hard with the tools of trade, but the public said: "Well you can never find him when you want him," and this rule holds equally good in reference to the master plumber who depends upon a shop boy, bookkeeper or any other person to remain in his establishment and conduct his business even temporarily, while he takes his tools and goes out to construct work. It does not seem to suffice how much knowledge of the business these clerks, bookkeepers, etc., possess, the custom desires and insists upon talking with and consulting the "boss." This is, primarily, one of the reasons why the master plumber should not handle the tools of trade.

In the large cities, it would be impossible for a master to conduct a large business and attempt to handle tools. It requires all of his time to figure and estimate work, and look after the construction of same; in his case, he absolutely would not have time to handle tools. In the cities of moderate size it would possibly be different, inasmuch that the master would have a part of his time to use tools if inclined. In any case, the master, if he be a practical mechanic, would always feel more self-reliant than the proprietor who never started from the bottom, but it does not follow, and facts do not prove, that this knowledge and self-reliance as a practical mechanic, places him on the successful page, if he persists in handling tools, when he should have laid them aside and given his individual attention to the management and direction of his business.

Last Year's National Executive Officers.

From left to right: Secretary J. A. Gordon, Montreal; President F. G. Johnston, Ottawa; Past President A. J. Hammond, Winnipeg, and Treasurer Harry Mahoney, Guelph.

There are first-class journeymen who need the confidence of their employers who will handle the tools to the entire satisfaction of the boss and to his profit, providing he will use the same good business judgment in selecting and placing them that he uses in the general conduct of his business.

Is there such a fascination in using tools that it needs be necessary to continue to use them after stepping from the journeymen degree to that of master? In so many instances we hear the public say, so and so is a good mechanic and ought to succeed in his new business, and he probably would if he were schooled and trained in finances and business methods to the same extent that he has attained as a mechanic, but he is not. He is usually as unfit to manage a business when he starts as he was unfit to rough-in a complicated job of plumbing after he had worked six months as an apprentice, and right when he starts to conduct his business is the time to discontinue the use of tools and attend to his stock, books, directions to employers, and, lastly, but not least, be in his place of business to meet customers.

If a master plumber should occasionally use the tools it will generally follow that he is cross and irritable and not in a mood to meet his customers, or to perform the other duties which are sure to await him upon his return. This is positively true because of the change of vocation. A man to properly use tools and construct work must have each day some of that class of work to perform.

The question might be reduced to this phase. If a master desires or is inclined to handle tools it means that he is trying to save an outlay of money for a mechanic's labor, while he, in very fact, is neglecting the most important part of his business; the source or head from which all his income emanates—his store or shop as it is more commonly termed. A great many failures can be traced to the place where the master insisted on handling tools. If the trade is to be elevated, it must be accomplished through its members, and the surest way to do this is to occupy the position which you merit.

If you are to be a commissioned officer you cannot also be a private in the ranks, and you cannot afford to forget also the personal appearance which counts for so much in dealing with your customers, and that your greasy, mortar-covered overalls and cobwebbed cap are not designed for dress parade.

[Essay read at the National Association of Master Plumbers' Convention, held at Atlantic City, N.J., June 26, 27 and 28, 1906.]

SILVER AND ELECTRIC NOVELTIES.

Upon paying a visit to John Round & Son's showrooms in the Corestine building, Montreal, one is instantly impressed with the novelties that are shown and the originality of design that is apparent in every article. There is a craving to-day for original ideas, and John Round & Sons are certainly in the lead in the catering to the tastes of

those people who wish exclusive designs in silverware. The old stereotyped patterns and styles made in their thousands are dropping behind, and the demand is everywhere for something new in shape and independent in character. Round & Son are turning out most beautiful ideas in coffee sets, tea sets, fruit trays, etc., articles that are most unique, and appeal very strongly to those of artistic tastes. These individual patterns are all hand work, and if duplicated at all, are made in very small quantities, so that the purchaser has the satisfaction of getting an article which he may be sure will not become common nor will it be found on the table of any of his neighbors. Of course the cost of these exclusive designs is somewhat more than that of the ordinary article, but discriminating buyers find satisfaction in the possession of an exclusive design.

A good deal of attention is being given to candelabras for electric light. Two very handsome electric candelabras, with five lights, are now being shown, and one of the novelties is the mode of turning on the current Although each candelabra is connected with the table rent from the wall or ceiling plug, it is not necessary to raise from the table to turn the current on or off. A half revolution of the candelabra, lights or extinguishes the whole group of electric candles and the same idea is carried out in smaller groups of lights, even down to the individual candle.

A distinct novelty in cigarette cases is the "Diplomat." To extract a cigarette from the ordinary cigarette case, in which the cigarettes are kept in place by an elastic band, is at all times a troublesome matter, and frequently the cigarette is bent or broken before it is successfully removed. With the "Diplomat," however, the cigarettes are held securely in a stall which swings outward on a swivel when pressed with the thumb. In this way the cigarettes are free for easy removal.

The "Diplomat" is distinctly a new idea and will certainly be appreciated by men who carry small cigars and cigarettes.

WHY PLUMBING INSPECTION IS NECESSARY.

There are many small cities throughout the country having a system of sewer and water works where plumbing is installed in any way the so-called plumber desires, and without any thought of making the work sanitary or safe. His work is done solely for monetary consideration, writes J. F. Brady in the Plumbing Trade Journal.

In every place where plumbing work does not undergo inspection the above practice is very common; it may be found occasionally that conscientious men are also in the ranks of these plumbers and do their work as if it were to stand most rigid supervision; but these are indeed scarce.

In an article by Reuben S. Bemis, Plumbing Inspector, Providence, R.I., he stated that "44 per cent., nearly one-half, of the new plumbing examined by the inspector the first year after the law" (referring to the plumbing ordinance) "went into force, was found defective. As this new plumbing was done with the full knowledge that it was to be inspected, it is fair to assume that more care was taken than had formerly been the case by the plumbers with their work. Hence it can fairly be estimated that before the plumbing law went into force, more than half the plumbing done in the city was defective and unsafe." This goes to prove what happens in a large city; can we even imagine the vast amount of defective plumbing work which is going on in the numerous small ones around!

Plumbing, in common with other lines of business, under present conditions in some places, is retrograding instead of progressing, and there will be no relief until a spirit of competition which defrauds the consumer and endangers the life of trade, ceases!

The most successful way to stop reckless competition without working a hardship upon the people is to educate the people to know the importance of plumbing as a health factor and thereby to gain their support of the right sort of regulating law.

To cite, for instance, what character of work was done in London before laws were passed, I would state that some 25 years ago it was usual to lay nothing less than a 9-inch drain pipe for the main duct or drain of a usual London house, and some 10 or 15 years previous to that time the pipes were laid down in halves with a horizontal joint running the length of the drain.

And so it is that the board of directors or mayor of many of the small cities provides sewer and water facilities for his town and then the residents begin to equip their houses with plumbing conveniences, never once thinking that the man who is putting it in may be building a germ-breeding apparatus and before long pluck out their lives by the poisonous gases which are soon to emanate from a defectively constructed system. The so-called plumber in these places often does not know anything about traps, or even venting, and connects everything directly with the sewer.

Therefore, it is necessary to educate the people on this subject. Plumbing is indeed a science; it holds as important a position in the world's development as electricity and the other sciences, for it is only by well constructed plumbing work that the health of the citizens is preserved.

Hence, when a town decides to lay water and sewer systems, it should also consider the appointment of some one to superintend the work and who shall draft rules by which all such work shall be done in that town. This man, if he be properly qualified, can supervise both sewer and water installations and anything in this line, and a charge made for a permit for all work, and for each inspection would provide a revenue with which to pay his salary.

Inspector in Small Towns.

I think the best example of this is given by a small town in Maryland, Hyattsville, of about 2,200 people. Here they have sewer, water and gas. A permit is required to be obtained for any building, sewer or water work, which is done. There is one man appointed every term, one year, who has supervision over all this work, and the revenues derived from the fees mentioned, pays his salary out of which he employs a clerk to keep his records. He provides an office at his home, and this little town is one of the most progressive in the country.

Throughout the west, and other sections, will be found many small towns of from 3,000 to 5,000 people, which are not provided with laws on sanitation or an inspector yet have sewer and water works.

My attention was called recently to the fact that Kansas City, Kan., with a population of 51,418 in 1900, had no inspector of plumbing, yet cities in the same state and neighborhood with a much lower population, were working under laws and the supervision of competent men.

It was with much interest I noted that the American Society of Inspectors of Plumbing and Sanitary Engineers, have as one of their main objects, the appointment of plumbing inspectors of all towns of 5,000 and over, or where sewer and water have been introduced. This object alone is worthy of such a society's existence, but it is also working for the standardization of plumbing laws and regulations, and the registration and licensing of plumbers.

In this connection, the National Association of Master Plumbers is to be heartily encouraged in their work of organizing locals wherever possible because the establishment of such an organization in a town ultimately leads towards the appointment of an inspector of plumbing, or if such an official is in that town, to better installation of plumbing work.

Such an official with a corps of assistants is absolutely essential in all cities to see that plumbing is properly installed and to prevent some of the vicious, defective, and life-destroying work of some people who call themselves plumbers from imposing upon the citizens.

The average citizen knows little of plumbing, and if water is supplied to a fixture and runs off through the waste he cares or thinks little of the dangers to his family, particularly his wife and little children, who are kept more constantly in the house and who are subjected to breathing the foul air which may emanate from the fixture or piping system which has defective joints, a trap not ventilated, the seal of which has been siphoned by the discharge of some other fixtures and many other defective practices too numerous to mention. Yet this class of work is done by unscrupulous plumbers and men who simply care for the almighty dollar, and it is for this class particularly for whom an inspector of plumbing is most desired.

The necessity of having an inspector of plumbing for inspection of plumbing work is becoming evident not only to large cities but even to small villages, and if this official can be appointed outside of political influence and subject to removal by the mayor, on substantiated complaint, incompetency, or for accepting a bribe; and if the term of office is not for a year, but until such time as he proves his unworthiness, the town or city will be able to obtain a better man, and one who will throw his whole interest into his work, whereas, if the appointment is for but a year, he will probably use his position to feather his own nest to his own advantage.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 17, 1906.

A remarkably heavy business in plumbing supplies is still being done, and there does not appear to be any let-up in the demand for all classes of material. Last year's record midsummer business has been eclipsed by the fine run of orders received during the present season.

All prices are steady. The advance in solder noted last week has been well maintained, the stiffening of tin and lead having still further strengthened the market.

Many of the large buildings now in course of erection in Montreal are nearly completed, with the result that the demand for finishing materials on plumbing jobs is particularly large.

RANGE BOILERS — Market conditions are about as usual. We still quote as follows: Iron clad, 30 gal., $5; 40 gal., $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE—There is no change to report. We still give the following discount: 15 per cent., f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b., London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—The normal business is being done. We still give the following discount: Discount on all sizes of nipples up to 6 inch, 67 1-2 to 70 per cent.

IRON PIPE—The situation is much more satisfactory at present, both on account of the large volume of business and the freedom from price-cutting. We are still quoting as follows: Standard pipe in lots of 100 ft., regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27; 2 inches, $36.50; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS — Although the season is now well advanced, business continues lively. We still quote: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—The advance made last week is steadily held, and we still quote: Bar solder, half and half, guaranteed, 24c.; No. 2 wiping solder, 21c.

ENAMELWARE—With the advance of the season the demand is improving, and brisk inquiries are reported. We quote: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.50, special $17.15; plate E35, 5 feet, 1st quantity, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.: special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, Aug 17, 1896

There is a tendency to higher prices in solder this week on account of the advance in tin. The best is quoted by one or two jobbers as high as 27c., but from 23c. to 25c. are about the ruling quotations.

From present indications the demand for hot water boilers, radiators and all hot water and steam heating supplies will be greater this year than ever before. Large bills of goods are booked, and those in a position to guage the Fall business say there will in all probability be a shortage of these goods by the year's end.

The plumbing trade keeps up well, particularly in finishing goods, a great quantity of which is being sold.

Iron pipe is still undergoing more or less cutting in price, but latterly a steadier condition has existed.

LEAD PIPE — Quotations continue steady and demand brisk. We quote: Lead pipe, 8c., discount 15 per cent.

SOIL PIPE AND FITTINGS—Quotations continue as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—The usual business is being done, with some price cutting. We quote: Black, 1 in. pipe $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS — We quote as follows: Cast iron elbows, tees, crosses, etc., 67 1-2 per cent.; cast iron plugs and bushings, 67 1-2 per cent.; flange unions, 65 per cent.; nipples, 75 and 5 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 and 10 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 65 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 1-2 per cent.; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallon, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—The sales of radiators are increasing daily, and the indications are that this Fall will show the largest sales yet We quote: Hot water, 50 and 2½ per cent.; steam, 50 and 5 per cent.; wall radiators, 50 per cent.

SOLDER—The market is much firmer and quotations generally higher than last week. We quote: Bar solder, half-and-half, guaranteed, 25c.; wiping, 23c.

ENAMELWARE — Manufacturers are keeping well up in their shipments, although some lines are short. The demand for enamel goods is at its greatest and prices keep very firm.

HINTS TO PLUMBERS AND FITTERS.

Buy right, sell right and make a profit.

Establish your credit by being prompt in making collections and prompt in paying your bills.

Establish a reputation for good work. Employ careful, competent workmen, clean in their work, respectful to the customer.

A good workman is not destructive; he is constructive. He examines every foot of pipe and each fitting before putting under floors. He does not soil carpets or woodwork. He does not break the plaster or walls in the home, nor allow the ceilings to be flooded, either through open air valves, or other carelessness.

When a customer enters a complaint, investigate the cause at once, and apply the remedy.

When you submit a bid which carries a fair profit, maintain the price, and it will command the respect and confidence of your customer, and win in the race with the irresponsible cut rate competitor.

THE PAGE-HERSEY CHANGE.

W. W. Near, Guelph, and H. Friedman, Pittsburg, of the Page, Hersey Iron Tube & Lead Co., Guelph, were visitors in Toronto last week. The new corporation is capitalized at $2,000,000, and will go into the manufacture of lead pipe, etc., it is understood.

AN ECHO OF THE CONVENTION.

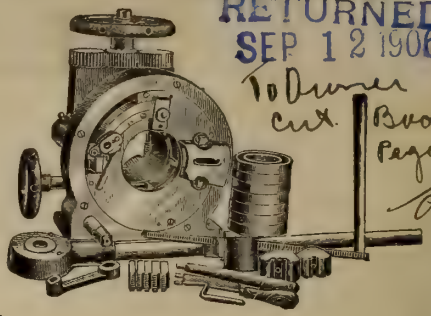
Editor Hardware and Metal : — The eleventh session of the master plumbers' parliament just held in Ottawa stands forward as the most remarkable in the history of the National Association. It was a challenge for the admiration and applause of the general trade which has been lampooned, caricatured and villified by a malevolent press. Did they allow that the plumbers' failings leaned to virtue's side, or will it ever be allowed? Nit. With their backs to the wall the local reception committee decided that the National Association would triumphantly assert itself, arrest hasty and ill-formed opinions and continue to do the work it is legitimately entitled to in this organic age. Is there a business man with a soul so dead, who to himself has never said, am I not right in applying means parallel with the law, that will secure a profitable remuneration for the responsibilities of business ? Let the absentees think it over and shake off their stage fright. Ottawa did like the heroine one loves to imagine—acted her part with courage, sincerity and majesty. She formed attachments and made everlasting friends of her visitors. How nice. How complimentary. Indicating in bold relief the moral fibre of the reception committee and the sorrow of those who were near it and yet not in it. Those who were humbled have been exalted. Shades of departed greatness linger no longer ; new hopes, new life are personified in new men. Onward, commercial soldiers, prove by your wit, courage and integrity that you are second to no class, that your calling gives you an eminence greater than all professions, that your work in this abundant country is only at the beginning, that your methods of business, if fair and square to yourselves, will be fair and square to the public, but if unfair and injurious to yourselves, it will be likewise to the public. Now for order in business. Give the attorneys and lawyers a rest. Hurrah for Montreal, Winnipeg, North Bay and Ottawa. Ottawa, Ottawa, Ottawa. It buzzes like a bee in a curl.

HE HAD TO STAND UP.

An American doctor built an elegant home and his bathroom was exceptionally beautiful, being of white marble with silver hardware; a music-box was concealed in the room. After completion of the home an Englishman came to visit the doctor. Many Englishmen show great respect for their sovereign and their country, and this one was no exception.

After showing his home to the Englishman the doctor remembered the fondness English people have for the bath, and escorted his guest to the bathroom, and while there turned on the music-box, wishing to give his guest a pleasant surprise as he bathed. Then he left his friend in the bathroom.

About an hour later the Englishman joined his host in the drawingroom. The doctor immediately asked what his guest thought of the bathroom. The Englishman replied : "It is beautiful, beautiful."



"Well," said the doctor, "how did you like my music-box ?"

"Bah ! That music-box ! The old thing played 'God Save the King,' and I had to stand up the whole time I was trying to bathe."

Southampton, Ont., ratepayers have passed a bylaw authorizing the town to build a filter basin, extend mains and improve the waterworks system.

M. Brearty, who recently opened up a steamfitting shop on Spadina avenue, Toronto, is installing a single pipe heating system in the Canada Biscuit Building, for Smith, Baggs & Heaven, Toronto.

A Certain Sense of Satisfaction

RETURNED SEP 12 1906 To Dunn Cut. Book 56 Page 2 a.a.w.

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

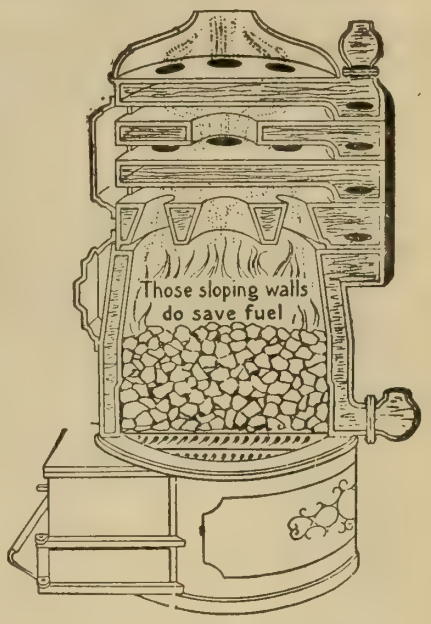
That double-depth first water section in an Oxford Hot Water Boiler.....

The first water section in the Oxford Boiler is twice as deep as the other sections, and its flues are bell-shaped—bigger below than above.

That's one of the things that makes it certain an Oxford Boiler will heat a house better for the same fuel-cost.



And it's one of the things that explains itself to the customer. He needn't know much about heating systems to see why it MUST save fuel.

There are just ten other things about an Oxford Boiler that the customer can see just as plainly. Every one of them shows him where he saves when he accepts **your** tender on a heating job . . . . if you've figured on the Oxford, and told him what there is to tell about an Oxford.

Do you know of another boiler with eleven betterments that the **customer** can see the reason for? That explains themselves? That sells boilers?

Just on the chance that the Oxford Boiler WILL pay you best to push—and it WILL, if you give it half a chance—suppose you ask us for particulars.

If you'll drop us a post-card request, we think we can interest you in a new proposition on

The Oxford System of Hot Water Heating

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

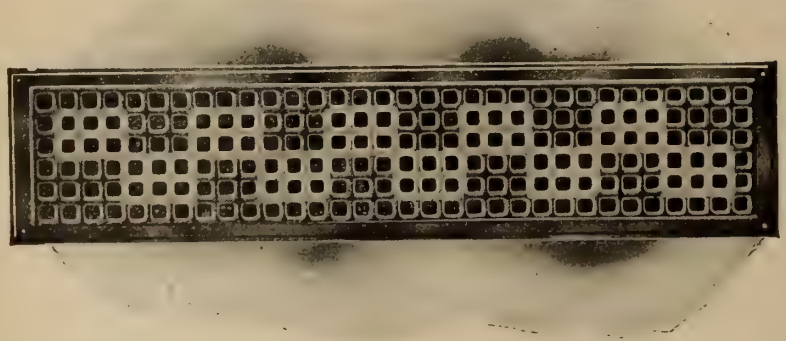
STAY-ON



Horse Blankets

"Imperial Crown" Brand

The difficulty with most Horse Blankets is that no matter how you attach them to the horse, they will work off In the special make of our **STAY-ON BLANKETS** this difficulty is overcome. We have spent labor and money to perfect all kinds of horse clothing, and we are pleased to demonstrate to all the advantages derived from the use of our specialties. You pay no more for our goods than you do for inferior qualities.

TO THE HARDWARE TRADE

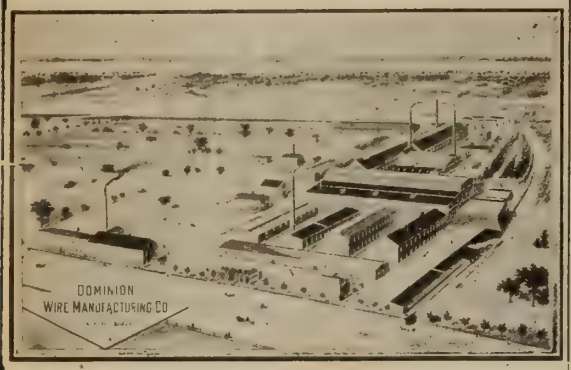
In the

HUDSON PATTERN APPLE-PARER

we offer you a machine that is made by skilled mechanics and guaranteed by a reliable house.

That's more than can be said of many of the American parers, which perhaps you have been asked to buy, but which you certainly could never sell.

The HUDSON PATTERN APPLE-PARER is substantial right through. It works perfectly. Critics say it is the finest model in the world.



Your jobber should be able to give you further particulars, but if he cannot, write direct to

Leg Irons

No. 8 Bean's 12 in. Chain, Nickel-plated. Wgt., 27 ozs.

ON THE SIDE

You can make more than you imagine by stocking a small supply of police goods as a side line.

Every town that can boast of having a policeman has need of these goods. Why not get the orders instead of letting them go to the large houses in the city? You can do it as well as not, if you only go to the trouble of letting the corporations of your own and surrounding towns know that you keep a stock on hand, and can sell them at the same prices that they can be had for in the larger cities.

It's strange but true, that as long as the world goes round, men will break the law, and you as well as anybody else, might as well reap the benefits to be derived from the mis-deeds of others.

If you are interested enough to ask our prices, you'll not regret it.

We Ship promptly

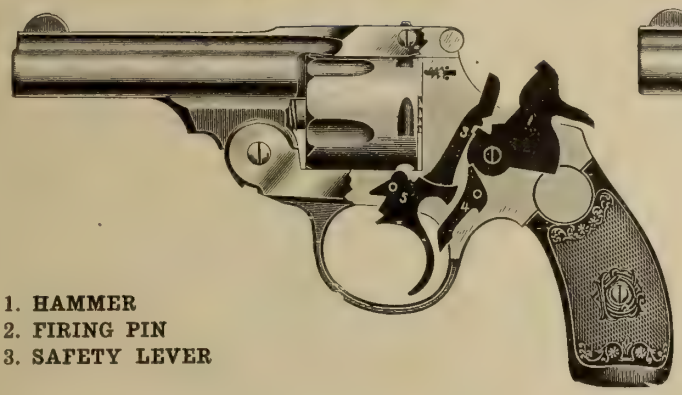
If you shoot yourself and have not used "KYNOCH'S AMMUNITION" you have missed one of the pleasures of life.

Kynoch's Cartridges are loaded with "Axite," the new smokeless powder which gives increased velocity with flatter trajectory, than other powders without increased pressure.

The residue deposit in the barrel after firing this ammunition reduces the friction between bullet and barrel.

The accuracy is greatly increased, and the recoil comfortable.

A trial of this ammunition is all that is needed to have you enlisted as a regular customer for it.



A further supply has just arrived, which we distribute through hardware dealers only.

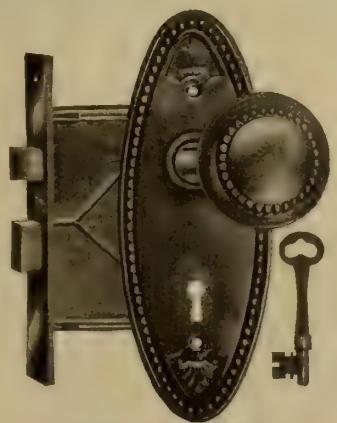
THE "HUDSON"—Pares and Cores.

HARDWARE F.&W. Limited, MONTREAL

(FROTHINGHAM & WORKMAN, Limited)

There is something very pleasing about the design of the "Crown" locks.



The rope of beads forms a sort of frame for the smooth mirror-like surface within, and the crown at the top and the simple ornament at the bottom take away the plainness and severity which otherwise would be felt.

In construction the locks have points as favorable as the design. The entire lock is of wrought steel and unbreakable. The bolts work freely and smoothly.

Are not these features you desire in stock of locks?

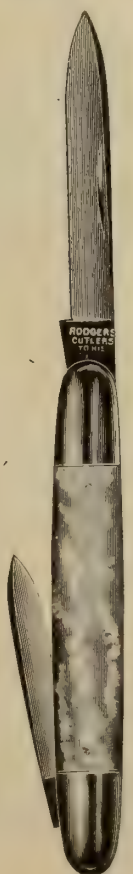
We have the "Crown" design in steel, bronze pla ed, and in wrought bronze, each in two finishes.

Ask our travellers to show you our full line of locks.

"CROWN" DESIGN

F. & W.

One square yard in a show case will contain a large enough line of pocket cutlery for the ordinary store.



And no other square yard in the store can be stocked with more profitable goods.

You probably sell a pocket knife on the average every hour.

How much do you make on cutlery? From 50 to 100%, or probably $2.00 to $3.00 per day off that square yard.

Don't you wish you had 100 other square yards equally profitable?

We have 450 different numbers of pocket cutlery in our stock. If you have poor selling lines drop them. Make your square yard more profitable. Our travellers will show you samples.

Will Hold up a Shelf!

That's what a shelf bracket is for.

For this purpose there can be NOTHING BETTER, NOTHING CHEAPER than the BRADLEY STEEL BRACKET. It is well Japanned, Strong and Light. The saving on freight is a good profit aside from the lower price at which the goods are sold. Order direct or through your jobber.

ATLAS MFG. CO., New Haven, Conn., U.S.A.

The Dealer's Reputation depends on the quality of the Goods he sells.

H&R REVOLVERS

Are known around the world for their safety, accuracy, durability, perfect design and general superiority.

Only the most skilled mechanics and only the finest quality of material employed in their manufacture. Every piece is finished to the 1000th part of an inch and fits perfectly. ***No Rattle*** in "H & R" such as a quick shake reveals in other makes.

Every revolver that leaves the factory has passed the most rigid inspection and is guaranteed perfect. Barrel and cylinder drilled from solid piece of finest forged steel; solid steel frame; handsome rubber stock affording good grip.

Noted for smooth action, perfect accuracy and power. Don't experiment with an unreliable make because low price is offered as a tempting bait.

The retail price ranges from $2.50 to $8.00 and each model is the greatest value ever offered for the price. They are the kind that do not come back, but give permanent satisfaction.

Put in a full line and you will be pleased with the results. Your jobber can supply you.

HARRINGTON & RICHARDSON ARMS CO.

Makers of the H & R Famous Safety Hammerless

314 PARK AVE. **WORCESTER, MASS., U.S.A.**

Louden's Standard Jointed Barn Door Hangers

CANNOT JUMP THE TRACK.

They always run easily and give satisfaction.

Everyone who uses them is more than pleased.

They also have track cleaners which throw all obstructions off the track, instead of letting them wedge under the wheels, as other hangers do. This feature is fully covered by our patent.

They will run on any 1¼ x 3/16 Barn Door Track.

Like all other Hangers that we make, they are the best that are made.

LOUDEN MACHINERY CO., Guelph, Ont.

PETERBOROUGH, ONT.

Ventilation Is Important

as a feature of modern buildings.

There are many buildings and residences whose occupants are afflicted with drowsiness and headaches, because the ventilation is imperfect or has been altogether neglected.

THE AEOLIAN VENTILATOR

is unexcelled as a means of producing pure air in large buildings, closet rooms, vaults of churches, schools, factories, stables, etc.

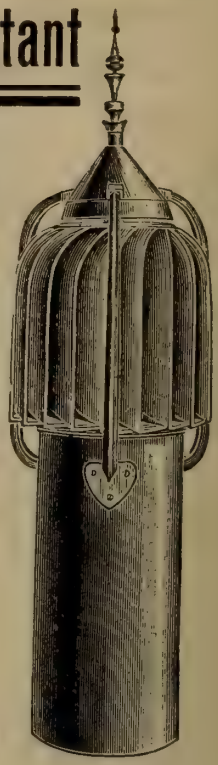
As will be seen from the accompanying illustration, **The Aeolian Ventilator** is very ornamental in appearance, while also possessing exceptional lasting qualities.

We like to talk about the "Aeolian" Will you write us for particulars?

Read this testimonial:

OTTAWA, June 4th, 1903.

Messrs. THE J. W. HARRIS CO., LIMITED, Montreal.



GENTLEMEN,—In reply to your letter of 1st of June inst., beg to say "AEOLIAN" Ventilators we got from you have always proved satisfactory to us and we can recommend them when such an article is required.

Yours respectfully,
McKINLEY & NORTHWOOD.

The Price is Inconsiderable in Comparison with the Results

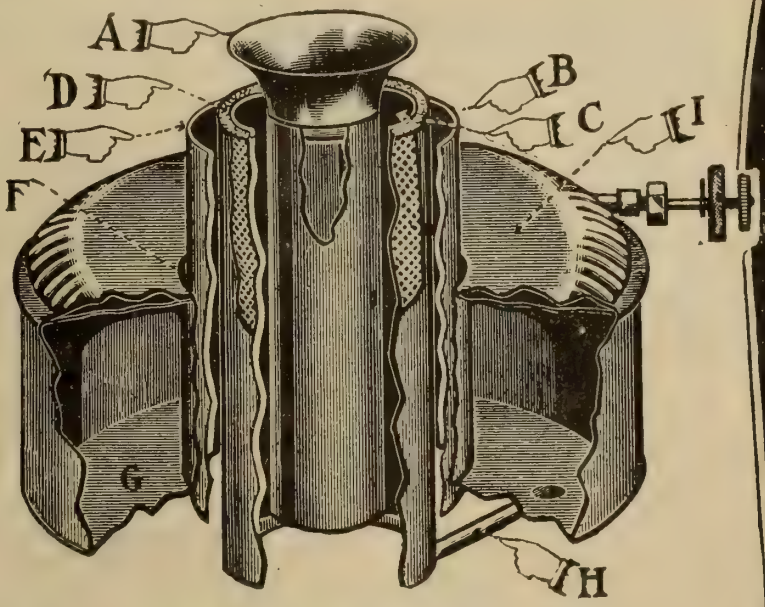
GENERAL HARDWARE AND METALS



THE ALUMINUM OIL HEATER

Sales nearing the million mark, because we've got the heater that gets the trade.

Get our printed matter and prices before buying elsewhere.

Remember, the Aluminum is the only Oil Heater which heats by radiation as well as by circulation—the only Oil Heater with partition in drum to deflect the heat and prevent it going straight up.

OUR SAFETY BURNER DOES IT

A—Flame Spreader ; **B**—Air Space outside Wick Tube ; **C**—Air Space inside Wick Tube ; **D**—Wick ; **E**—Outside Casing to Burner ; **F**—Air Space between Fount and Outer Casing ; **G**—Fount for Oil ; **H**—Feed Pipe ; **I**—Shield resting on top of Fount with air space underneath.

Look at this burner. Notice solid flame spreader. No perforations there to clog up.

See those generous air passages which makes ventilation and combustion perfect. No possibility of explosions there. Simple in operation as a lamp. Any child can take out and put in wick. Remember, the Aluminum is the only Oil Heater that radiates heat like a base burner, from all points.

Get orders in early.

The Woman Who Sees It, Wants It. . . .

The range that puts the "I-want-that-kind" notion into people's heads happens to be the range that earns you most profits and that you get most help in selling.

Naturally, the Imperial Oxford isn't a cheap range, in any sense of the word. And yet it sells easier than low-priced ranges, even to folks who haven't much money to spend—simply because there are things about the Imperial Oxford that a woman **knows** are ahead of any range she ever saw.

Visit the Exposition and visit us, too: . .

You will be most welcome at our exhibit in the STOVE BUILDING at the Exposition, where we shall make a notable display. You are specially invited, also, to inspect either of our mammoth factory plants at 500 King Street West, and at Toronto Junction. Come and be interested.

The diffusive oven-flue, for instance—practically a guarantee that the Imperial Oxford will do baking perfectly—what woman can't see the matchless value of that, once you show her why it is so?

But how can you show her—and how can you know what the Imperial Oxford would do for your store—until you ask us to show you?

We can take a hint from a postcard, if you sign it.

MARITIME BOARD OF TRADE

Sea-Board Provinces One in Business Interests—Merchants Parliament Advocates Political Consolidation into One Province—Splendid Gathering at Amherst, N S. Many Important Subjects Discussed.

Progress and enthusiasm were the dominant notes of the twelfth annual convention of the Maritime Board of Trade which was held at Amherst, N.S. under most favorable auspices on August 15 and 16.

The subjects discussed were of great importance and several resolutions of considerable importance were put through.

Rev. Father Burke was again on hand from Prince Edward Island and put forward with greater vigor than ever the project of the tunnel.

At the election of officers a very popular and capable man, Mr. W. S. Fisher, of St. John, was elected president.

There was a fine attendance of delegates from all parts of the Maritime Provinces.

Captain Read, the president, called the meeting to order promptly at ten o'clock. On the platform besides himself were C. J. Silliker, mayor of Amherst; John McKeen, president of the Amherst Board of Trade; W. S. Fisher, first vice-president of the Maritime Board of Trade, and Charles M. Creed.

Captain Read was applauded when he called upon the mayor of Amherst to address the gathering.

The mayor of Amherst, C. J. Silliker's opening address was one of welcome. He asked the delegates to make themselves at home. The members of the council had consulted the different managers of the manufacturing plants, and every delegate would be permitted to visit these works without the usual red tape of having a pass.

He apologized for the tearing up of the streets which had been necessary at this time. He hoped for a good profitable time and he knew that would be the case.

President of Amherst Board of Trade, Mr. John McKeen, said on behalf of the board that it was gratifying to see the splendid response to the invitation of the Amherst board. The local members had looked forward to the meeting. They found on the day of opening that there were more delegates than Amherst could accommodate in hotel life. Citizens had come to their rescue and their loyalty was appreciated by the board. It was the desire of Amherst to make the visitors happy and it would be accomplished if all would co-operate.

Referring to Amherst, he said that the city had nearly doubled in population during the year. Yet the building operations had not kept pace with the growth of population; but Amherst was going ahead in every respect. He again welcomed the members.

Roll Call of Delegates.

Following are the names of delegates present:

NOVA SCOTIA.

Amherst—Harvey Pipe, E. B. Elderkin, J. A. Crossman, John McKeen.

Annapolis—A. E. Atlee.

Berwick—H. G. Harris.

Canning—A. D. Payzant.

Canso—C. H. Whitman.

Halifax—W. H. Stefns, Hon. W. Ross, J. S. Creed, J. E. De Wolfe, W. J. Clayton, Geo. E. Faulkner, John W. Regan, A. M. Bell, I. C. Stewart, A. N. Whitman, G. S. Campbell, A. T. Weldon.

W. S. FISHER, ST. JOHN, N.B.
President Maritime Board of Trade, 1906-7.

Kempt, Queens County—Thomas Keillor.

Kentville—W. G. De Wolfe, Wm. Fraser, E. J. Ward, H. G. Harris, C. W. Webster.

Kings County Board—J. A. Kinsman, S. A. Bowser.

Truro—C. E. Bentley, G. O. Fulton, G. A. Hall.

Windsor—B. W. Mills, H. A. Lynch.

Yarmouth—C. H. Armstrong, Robert Caie, R. S. Crawford.

Sydney, C.B.—J. S. McKinnon, H. F. McDougall, H. E. Kendall, J. H. Young, J. W. Dawson, H. G. Hagen, A. S. Curry, F. L. Dixon, S. P. Challoner.

North Sydney—J. M. Armstrong.

NEW BRUNSWICK.

Chatham—J. L. Stewart, W. L. T. Weldon, W. B. Snowball.

Moncton—Hon. F. J. Sweeney, A. E. Williams, G. L. Harris, John Abram, F. W. Gumner, Jas. M. Ross, H. G. Chanter, F. W. McDougall, C. P. Harris, T. J. Welsh, E. C. Coll, W. H. Edgett.

Sackville—Hon. Josiah Wood, S. W. Copp, F. B. Black.

St. John—W. S. Fisher, W. H. Thorne, J. M. Sutherland, T. H. Estabrooks, Jas. Pender, W. W. Frink, C. M. Bostwick, P. W. Trider, W. M. Jarvis, Robt. Maxwell, Thos. White, W. F. Hathway, W. E. Anderson, J. A. Likely, Newton Harvey.

PRINCE EDWARD ISLAND.

Alberton, West Prince—Rev. A. E. Burke, W. H. Dennis, Jas. E. Birch.

Summerside—Joseph Read, W. A. Brenan, Wm. Stewart.

Charlottetown—S. N. Crabbe, Hon. Geo. E. Hughes.

Newspapers—A. M. Belding, St. John Telegraph; G. S. Gowe, St. John Sun; C. D. Cliffe, MacLean Trade Papers, Toronto.

Mr. De Wolfe remarked that a number of delegates were not present at the roll call and he advised that a full list would be issued before closing day.

Mr. De Wolfe further suggested that as a full report had been issued in the MacLean trade papers, of all the proceedings, the reading of the minutes might easily be dispensed with. This was unanimously adopted.

A committee was then appointed as follows to select a sort of menu for the convention: Vice-President R. S. Fisher, W. H. Thorne, E. L. Derkin, J. McKeen, Rev. A. E. Burke, G. A. Calkin, W. H. Sterns, S. P. Challoner, Hector McDougall.

While the committee was away Mr. Creed read letters of regret from Governor Snowball, R. L. Borden, W. S. Fielding, Hon. Senator Josiah Wood, Sackville; P. Gifkins, general manager D. A. R.; D. Pottinger, general manager I.C.R.; J. M. Lyons, general passenger agent, I.C.R.; Lieut.-Col. J. B. MacLean, Toronto; the secretaries of the Montreal, Ottawa, Toronto and Hamilton Boards of Trade and the Montreal Star and Toronto Globe.

SECRETARY-TREASURER'S REPORT.

Mr. Chas. M. Creed was loyally applauded when he arose to read his annual report, as follows:

Gentlemen,—Your secretary-treasurer begs herewith to hand you his report for the current year.

All the various resolutions and recommendations passed at the last annual meeting were forwarded as directed, and copies of important resolutions requiring the prompt attention of the Federal Government were forwarded to the

ministers of the different departments as speedily as possible after the annual meeting, those concerning the provincial governments were forwarded to the premiers of the same and copies of all resolutions were mailed to every board of trade in the Maritime Provinces.

On January 9, as usual, copies of all resolutions were mailed to W. S. Loggie, M.P., Chatham, N.B.; J. J. Hughes, M. P., P.E.I.; Dr. J. B. Black, Windsor; H. J. Logan, M.P., Amherst, and B. B. Law, M.P., Yarmouth, in advance of the meeting of the Federal Parliament in order that they could become familiar with them.

After the opening of the Federal Parliament copies of all resolutions were forwarded to the ministers of the various departments, and to all members from the Maritime Provinces.

The correspondence connected with the same as also from the boards being too voluminous to read are now on the table for the inspection of the members.

CAPT. JOSEPH READ, SUMMERSIDE, P.E.I.
Past President
Maritime Board of Trade.

Annual Report.

The annual report was published as usual and copies mailed to the ministers of the departments at Ottawa, the members from the Maritime Provinces and senators, also to all boards of trade in the Maritime Provinces and elsewhere as opportunity offered.

Correspondence with the Boards.

This has had unremitting attention during the year, and am pleased to report a growing interest is being taken by the secretaries who have been prompt in answering correspondence.

Unaffiliated Boards.

Have had every attention paid them; they have been written to frequently urging them to affiliate, and as a result the boards of Dartmouth and Liverpool have affiliated, and are doing good work.

New Boards.

A new board has been formed at Caledonia called the Queen's Board; it has affiliated with this board and is doing good work.

Subjects for Discussion and Notices of Annual Meeting.

The subjects for discussion at the annual meeting were mailed to all boards on August 6. This is most desirable as it gives the delegates time to study them and enable them to come to the meeting prepared to join in the debates on the subjects proposed.

Notices of the date and place of annual meeting with railway arrangements for delegates were mailed at the same time.

Lovell's Gazetteer of British North America

Having been brought to my notice that Messrs. J. Lovell & Son, of Montreal, were about publishing a new edition of their Gazetteer, I wrote them asking if my assistance in sending them a list of the industries in the cities and towns of the Maritime Provinces would be of service to them, to which they replied thanking me for the offer. Circular letters were sent to all the boards of trade with the result that twenty-four boards sent in statements of the industries of their cities and towns, which were forwarded Messrs Lovell & Son, who duly acknowledged the receipt of same.

Sixth Congress of Chambers of Commerce of the Empire.

The sixth congress of Chambers of Commerce of the Empire was held at London, G.B., in July and this board was ably represented there by our esteemed second vice-president, A. M. Bell.

In conclusion, during the past year I have devoted a deal of time, care and thought for the advancement of the board, at the same time doing all possible to assist your worthy president, in which I had the able assistance and advice of our first vice-president, W. S. Fisher, of St. John, N.B., and also of M. G. DeWolfe, of Kentville, N.S., who has been unremitting in his efforts at all times for the advancement and prosperity of the board.

Accounts for the Year.

The accounts for the year are all prepared, but as several boards will pay their per capita tax before the close of this day's meeting, they will be presented to-morrow for your approval and audit.

All of which is respectfully submitted

CHARLES M. CREED,

Mr. De Wolfe then paid compliments to Mr. Creed as permanent secretary, and in moving the adoption of the report he could not avoid saying he averred that without Mr. Creed there would be no Maritime Board of Trade. The motion was carried unanimously.

Captain Read, the president, joined in the expressions of good will towards Mr. Creed. Captain Read believed that no body could live without a good secretary.

Mr. Creed formally thanked the members for receiving his report.

W. F. Humphrey, St. John, N.B., spoke in favor of shortening the proceedings of the committee by some arrangement before the day of session.

Captain Read agreed with Mr. Humphrey that it was a very important matter to shorten the agenda of doings, but it would be a mistake to deal severely with the matter of elimination of subjects as it would discourage many of the smaller boards should there be too many subjects erased from the bill of fare as arranged.

Mr. Atlee, of Annapolis board, also thought some improvement could be made as the committee could be aided greatly by some work before the day of convention.

Several others spoke, expressing the feeling that the board was a great meeting place for busy men who could get relaxation out of it.

James E. Birch, of Alberton, spoke strongly in favor of the present method

E. K. SPINNEY, YARMOUTH, N.S.
Past President Maritime Board of Trade.

being continued. No one could tell, he claimed, what number of delegates would attend. It would be impossible to tell until the president saw the delegates how to adjust the proceedings.

Captain Read thought that the secretary alone would be the man to help them out by putting the more prominent subjects in relative order.

Among the other speakers on this subject of changing the plan of the committee were M. G. De Wolfe, of Kentville, W. H. Dennis, of West Prince, P.E.I., and A. H. Wetmore, St. John.

Mr. Sutherland, C.P.R., St. John, thought a great deal of the discussion might have been avoided if a little more care had been exercised by the local boards before sending in matter for consideration.

Decision Reached.

Several others spoke, and finally it was moved by Prof. W. W. Andrews, seconded by A. E. Atlee, and carried:

"That the president at each meeting of the Maritime Board name five boards which shall each elect one of their delegates to serve on a committee of resolutions to arrange the programme for the next year's meeting; such committee to meet with the officers of the Maritime Board at a convenient date preceding the meeting. And further, that it be ordered that all resolutions shall be sent to the secretary prepared in due form, a week previous to the meeting of the board."

At the afternoon session Captain Reid announced that this resolution was unconstitutional, and would have to be given as a notice of motion.

This was accepted by the movers and the resolution will be taken up at the next meeting.

Subjects of Consideration.

The committee upon agenda reported as follows upon the list of subjects discussed. The Rev. Father Burke as chairman read the list as follows:

1. General development of Maritime Provinces. Berwick—Cause and remedy for decreased population in counties of Nova Scotia bordering on Bay of Fundy. Yarmouth—Advertising of Maritime Provinces in the interests of immigration and repatriation. Souris—Immigration (farmers). Sydney—Immigration, etc. Halifax—Establishment of department of publicity for Maritime Provinces.

2. Transportation—Nationalization of ports, St. John, Halifax, Sydney. Digby—Daily service St. John and Digby. Liverpool—Control of railway rates. St. John—Amendment of preference to apply only to goods entering through Canadian ports. P. E. Island—Communication question. Alberton—Excessive I. C. R. rates.

3. International policy. — Digby and Halifax—Abrogation of modus vivendi. St. John—Union of Canada and West Indies.

4. National policy. — Halifax and Moncton—Steel shipbuilding. Chatham—Government ownership.

5. Interprovincial. — St. John—Maritime union. Sackville—Improvement of dyke lands.

6. Miscellaneous. — Digby—Sheep raising. Kings—Sheep raising. Kentville — Sheep raising. Moncton—Protection of forests. Halifax—Technical Education.

7. Municipal. — Dartmouth—Bonusing. Halifax—Municipal taxation. Truro — Municipal ownership.

PRESIDENT'S REPORT.

Captain Read then read his annual report. His first request was on behalf of the Board of Trade of Summerside, that the Maritime Board should choose Summerside as their next place of meeting. He said:

Gentlemen of the Maritime Board of Trade:

Before we enter into the discussion of the important subjects which will engage your attention during this session of the Maritime Board of Trade, I wish to thank this important body for the high honor conferred on me, personally, and upon Summerside, a town that does perhaps more produce business in proportion to its population than any other in Maritime Canada. It is indeed an honor to be recognized by such a representative body of professional, commercial and agricultural gentlemen as make up the Maritime Board.

In recognition of the honor, I have a mandate from our town and board of trade to invite this institution to come to Summerside next year to hold their annual meeting.

Most of the questions discussed last year and on which resolutions were passed, have received the attention of the Federal House and some of the recommendations have been acted upon effectively.

Fast Atlantic Mail Service.

Something has been done to advance this project, but not enough to warrant us resting on our oars.

The report of the Royal Commission on Transportation, which was given to the Federal Parliament during the last session recommended among other things the establishment of a bi-weekly fast Atlantic mail service, all the year round between Liverpool (England) and Halifar, N.S. Coupled with this recommendation it was also suggested the expediency of completing the chain of rapid transit by a similar fast Pacific line to give an all-British mail service through Canadian territory in conjunction with an Imperial subsidy. In this connection it is worthy of note that the new Isthmian railroad now in operation between Coatzacoalcos, in the Gulf of Mexico, and Salina Cruz, on the Pacific, better known as the Tehauntepec route, is claimed to be shorter from New York to the far east by 1,200 miles.

This emphasizes the paramount importance of insisting on Atlantic terminals for the new national transcontinental railroad, now building, and for which such liberal public subscriptions are being made.

Another feature of this commission report is the nationalization of, among others, the ports of Sydney and Halifax and St. John, N.B.

Government support to the building of steel ships in Canada is also recommended, and I would suggest that the Maritime Board of Trade endorse and emphasize these portions of the report.

Towards the tunnel to connect the two Government railways, viz., the I.C.R. and P. E. I. R., and which is only the permanent and certain solution of the transportation question as it affects P. E. Island, while not much has been done, yet much has been accomplished by enlisting the support of Canadian statesmen of the first class. I have it on the best authority that the Premier of Canada is now convinced as to its necessity and its feasibility and that just so soon as the pressure of some of the very large undertakings of the Government is overcome, the tunnel will be built. It is for this Maritime Board a matter of first duty to hurry the day when that important work shall be commenced.

VIEW OF AMHERST, N. S.

People's Railroad.

During the year just passed some political demagogues combined with the jealousy of certain vested interests have made an attack on the people's railroad. This has produced a mixed result, partly good, but largely evil—good where it made for economical management, bad where it made for impairment of the service and exorbitant local freight rates.

The undue prssure brought to bear on the railroad management by the ungrateful people of Ontario, particularly, the very province which has been receiving the most benefit by the low freight charges of the Government roads and who have been especially benefited by the abolition of canal tolls, a measure which was so generously supported by the Maritime Provinces, had forced the Railway Department to do things, which, to say the least, have not been in the public interest. For instance, Ontario gets a freight rate seven times less than P. E. Island on goods of the same class for export to Barbadoes, etc., the Government in each case being the sole common carrier. They pay nine cents for a carriage of 825 miles while P. E. Island pays 23 cents for a carriage of 309 miles. I am, therefore, not surprised to see among the subjects for discussion this session the question offered by St. John, N.B. "Should not the canal system of Canada be made to pay its working expenses?"

A. M. BELL.
1st Vice-President Maritime Board of Trade.

Certainly the action of the Government in connection with the Government railroads, if continued, changes the whole canal question.

Great improvements have been made during the year in aids to navigation in these provinces; especially commendable is the Government's action in planting wireless telegraph stations at prominent points around our coasts, which is placing within the reach of the great ships that come to us from over sea as well as our coasting steamers, means of communication unthought of a few years ago. The introduction of gas buoys, fog signals and better lights has been marked; but this board should impress upon the Marine Department the necessity of giving timely notice of changes in the lighting of our coasts.

Maritime Union.

This subject is not to my mind within the scope of practical politics at any rate as far as my province is concerned; the fear engendered by the non-fulfilment of terms of union with Canada regarding winter communication and the action of the Federal House in reducing the representation against the well-known intention of the fathers of confederation have so embittered the people against the greater union that they are mightily prejudiced against the lesser and more desirable one. The irritation of the island people against the central authorities above noted is strongly reflected by the sister island of Newfoundland, which waits to see justice done to the smallest member of the Dominion before trusting her destinies to a possibly similar breach of faith. There is no consummation more desirable at this moment from a Maritime Proince point of view than the admission of Newfoundland to the union and nothing the Federal Parliament could do to hasten that inevitable event would be more surely effective than doing P. E. Island justice in the matter of her parliamentary representation and the construction of the tunnel.

Inland Fisheries.

Some attention was paid to this board's recommendation regarding Inland Fisheries. Very shortly there will be a conference between the provincial and federal authorities which will touch among other matters the very important matter which is yearly becoming more obtrusive.

I do not wish to worry you with a too long address, but feel that attention should be drawn to the self-containedness of these three provinces and to the real and permanent progress they have made in the year.

New Brunswick had never before received such high prices for her lumber, Nova Scotia has flourished marvelously in mining, manufacturing and commerce, and Prince Edward Island has had a most magnificent crop and got generally splendid prices. I cannot illustrate the self-containedness of our heritage better than advise you that the Sydney Board of Trade are contemplating the erection of a building for themselves. This building will be constructed of material drawn from a district within a radius of 40 miles of Sydney.

The foundation will be of Cape Breton freestone; the front will be of C. B. marble, quarried at Eskasoni on the east bay of Bras D'or Lakes; the remaining walls, of Sydney cement building blocks, with red granite trimmings from Boisdale, on the Little Bras D'or Lake; the chimneys, of brick manufactured at Mira, about twelve miles from the city; the plaster to be calcined plaster, the product of the gypsum quarries at St. Ann's; the interior finish, of C. B. maple and birch; roofing, the product of the Sanderson Manufacturing Co., a new concern to be established here next month (August); roofing cement from the Dominion Tar & Chemical Co., of this city; the girders of steel, the product either of the Dominion Iron & Steel Co. or the Nova Scotia Steel & Coal Co.; the nails to be made from the product of the Dominion Iron & Steel Co.

Subject to the site finally selected, the cost of the land and building will range from forty to eighty thousand dollars. But what need of illustration from a distance. Look round you right here in Amherst. It is not long since this busy city was a sleeping country village. Its advance has been wonderful and to-day it stands as an object lesson of what other towns in our provinces might be, ought to be, must be.

Insurance.

The unfair system of rating the safer Atlantic ports and the fogless Prince Edward Island ports on the same basis as the St. Lawrence River and foggy gulf ports still obtains.

Adjustment of the severe fire losses at San Francisco has evoked an indignant outburst of criticism regarding the attitude of certain fire insurance companies, which have either repudiated

C. M. CREED, HALIFAX, N.S.
Secretary Maritime Board of Trade.

their liabilities or compromised their settlements.

Some of these companies have been yearly taking lines of insurance in these Maritime Provinces; hitherto the integrity and ability of these corporations have been unquestioned.

The Government has been probing the methods and management of life and accident insurance companies doing business among us, and while the results have not yet been fully given to the public, enough has been shown to inspire confidence in the majority of our Canadian companies. Apart from this the investigations both in Canada and United States will eventually do a great deal of good in correcting past and present evils, also in preventing mismanagement in the future.

Maritime Immigration.

The action of this board last session has been fruitful in moving the Provin-

cial Governments to take hold of the question of immigration into these Maritime Provinces; and while we must deplore the movement of our own people west, it is gratifying to know that steps are being taken to replace them by emigrants of the best quality. The appointing of agents to meet the steamers on arrival at St. John and Halifax, supplemented by similar methods at the European ports of departure whereby books, pamphlets and general information regarding the opportunities in this end of the Dominion, would be distributed, is a matter worthy of recommendation.

I am convinced that as a matter of fact many of our own people are leaving homes much better than they will find in the west.

Exhibitions.

A commendable feature in the Dominion Exhibition, which is to be opened in Halifax next month, is a determined effort to inaugurate a proper fishery exhibit, a substantial building having been erected for the purpose.

Exhibitions of the first class will also be held in St. John, N.B., and Charlottetown, which promise to be the best for years.

The success which has attended the Winter Fair at Amherst affords gratifying evidence of the interest taken by the stock and agricultural interests of these provinces in developing these great branches of human effort.

Sixth Meeting of the Chambers of Commerce of the Empire.

A few weeks ago there met in London, England, the members of the Chambers of Commerce of the Empire. This was its sixth meeeting and this board was represented by my friend and colleague, Mr. Bell, of Halifax, one of our vice-presidents, who will no doubt report to you fully. This body, representing as it does the whole Empire, is destined to do much to weld together in Imperial unity this great Empire, which, even in its present chaotic condition is the most wonderful aggregation of humanity that ever acknowledged a common allegiance. It has the "promise and potency" of an Empire that unified politically, connected by that annihilator of time and space, electrical communication, with trade matters so arranged as to be mutually beneficial and financially just—would be an Empire that must make for peace without oppression and freedom without license.

Federation of the West Indies with Canada.

This idea has not yet been taken hold of by the public mind in either of the two groups of communities. Trade communications, however, are being well maintained and the volume of business between them is increasing year by year. This reciprocal interchange and the preferential treatment of each other by both these British communiites will inevitably draw them closer together in the near future.

Tourist Business.

From the testimony of a large number of the boards affiliated with the Maritime Board, it appears beyond doubt that the volume of tourist travel throughout the provinces has been well maintained since our gathering at Yarmouth last year. The arrivals at nearly all the points up to the present date also indicate satisfactory progress in this line of effort for the present season. An encouraging feature is the yearly increasing number of visitors from our sister provinces of Quebec and Ontario as evidenced by numerous organized excursions favoring us with their presence. Our delightful Summer climate, scenic and historical attractions are being recognized as affording ideal opportunities for conventions and business gatherings in addition to the seekers for health and change of scene. The systematic efforts introduced by this board and its affiliated boards are meeting with gratifying results in more reasonable transportation fares and improved hotel and cottage accommodation.

Considerable interest is also being taken in preserving historic sites as suggested by this board.

General Business.

Taken as a whole, the varied resources of the Maritime Provinces in the fisheries, lumber, mining, agricultural, horticultural and manufacturing production show an all-round average of satisfactory development. To ensure adequate results the benefits of technical knowledge in every branch of industry is gradually being recognized in our midst, as in other world centres, in order that the yield from sea and forest, mine, mill and farm shall show a steady increase from year to year.

We should not, however, become careless in these days of plenty and unequalled prosperity. I cannot but advise you that much of the good times we are now enjoying is due to the fact that our greatest competitor in the produce markets of Europe is now commercially prostrated by internal troubles as she was this time last year by her disastrous war with Japan. Let our people look to it that they maintain the character of their goods in such high standard of quality that when Russia, with 120 millions of people, with a quarter of the land area of the globe, becomes clothed in the garment of freedom, Canada may be so in possession of the markets by reason of the good quality of her goods and by reason of her consanguinity that she may not be ousted from her position.

TOWN HALL AND FIRE STATION, AMHERST, N.S.

The Peace Congress.

We have seen and heard of three great peacemakers, men whose high positions have been exalted by their acts, Edward VII, King of England; Roosevelt I, President of the United States and Bryan, the silver-tongued candidate, who is the Democratic idol of the latter country, vie with each other in promoting peace, which haply to-day is almost universal.

A. M. Bell moved the adoption of the report and referred to the part of the report which mentioned the growth of mining in the provinces.

Mr. De Wolfe then seconded the resolution in a witty speech. He considered it one of the finest addresses they had ever heard. It was carried unanimously.

W. S. Fisher gracefully put the resolu-

tion and made some very nice remarks about Captain Read's report.

Defends Parliament.

Senator Ross wished to correct the idea that the Federal Parliament was to blame for the scanty representation. That would require Imperial legislation over the British North America Act.

Captain Read replied saying that Prince Edward Island did not come into Confederation for a long time after the other provinces, yet one of the conditions of coming into the Dominion was that the island should have six members in the Federal House. On the other hand Senator Ross was right about the B. N. A. Act.

East Seeks Justice.

Rev. Father Burke offered a general resolution: "That in view of the fact that the upbuilding of the west has entailed a tremendous drain on the population and resources of Maritime Canada, the time has arrived when the general Government should devise some efficient means of recompense; by encouraging immigration of a suitable sort for the development of the fisheries, the agriculture, and the mines of these provinces, and by such bonusing or other fiscal treatment of prime industries as must necessarily give the requisite impetus to trade and commerce within them."

Mr. McDougall spoke of the reasons for the great immigration to the west. He had found out that the Northwest had been advertised extensively. He urged numbers of the immigrants to come to the Maritime Provinces. He showed them the benefits to be found in these provinces. He had pictured great things to many and could not induce one to come. In the Old Country he had found not a sign of any advertising of the provinces in London, Liverpool and Glasgow. Not one inducement was advertised over there to show the benefits of the Maritime Provinces. He found that people were carried from Liverpool to Winnipeg for the sum of $30. He regretted to see men leaving the east, but he was glad they were remaining in Canada. He believed that the Maritime Province people could induce the Government to use some means to bring more immigrants to the east. In Cape Breton they had several iron industries. Why should not the fishery men and the agriculturists use their influence to get something done for the eastern provinces? The Government should not be permitted to disregard the conditions of the east. Rates west were always less than rates east. The Government railway should be used to bring immigrants back to the east from Montreal. If the C.P.R. could carry them west for $10 then the I.C.R. should be also able. Some effort should be put forth by this board to ask the Government to have ships land somewhere in the eastern ports.

Mr. McDougall's remarks were heartily applauded.

Advertising Abroad.

Mr. Regan then read a paper on this subject of advertising the Maritime Provinces abroad. He believed a bureau of advertising should be established at once in the Maritime Provinces. The daily papers could help greatly by using more space for the advertising of the Lower Provinces. Some school books were not enough devoted to local information. He argued that normal schools would do well to have departments in which the beauties and history of the provinces were accentuated. He referred to the results of good advertising in the American and Canadian west.

Advertising Brings Results.

Railroad systems always maintained publicity departments. In fact, nearly all business men were alive to the needs of publicity. It had always brought results.

Tourists, for instance, should be more encouraged. He showed how the neighboring State of Maine made sixteen millions last season out of tourists. The Maritime Provinces could do even more than that. Some advertising was being done, but more could be done. He believed that within the next ten years millions of American money would be invested in the Maritime Provinces, most especially if the Government would take action immediately and give an appropriation, not niggardly, for advertising the provinces.

Mr. Regan was warmly applauded and Captain Reid remarked upon the value

M. G. DeWOLFE, KENTVILLE, N.S.
Auditor Maritime Board of Trade.

of the paper, yet reminded the convention that speakers were as a rule limited to ten minutes.

J. McKeen emphasized the need of getting immigrants from England and Scotland to come direct to the Maritime points as destinations.

Father Burke: "Don't we want anyone from Ireland?" (Laughter.)

The New England of Canada.

Mr. McKeen pointed out that it was all very well to advertise, but one must have something good to advertise. The possibilities of the west were immense. They should never forget that. What the Maritimes must remember was that they must be the New England of Canada; they must be the makers of goods for all these consumers who were migrating to the great west. Without worrying about the migration, let the east encourage manufacturing so that supplies for the whole west would be furnished by the Maritime Provinces. He emphasized the growth of the commerce of Amherst. He said that an output of three and a half millions came from this one little town. They were sending goods to the great west. Money was coming back and building was necessary to keep pace with the increase of population that must come. He believed that bonusing industries was an artificial means of getting factories. Natural methods were the only means of attracting genuine industries. (Applause.)

Something Wrong Somewhere.

Mr. De Wolfe, of Kentville, pointed out how large was this subject, and it seemed as if either the provinces were standing still or there must be something wrong. Although the provinces had the natural facilities they were not going ahead. He endorsed the remarks of Mr. McKeen, and spoke of Amherst as a model for all other towns. He spoke of Truro, where he had just visited the Truro Knitting Mills, and there was a fine example of what two bright young men could do. They could not fill their orders owing to the demand in the great west.

Senator Ross spoke of the comforts available in the Maritime Provinces, and it was the environment and associations in the provinces which should be advertised. Farmers should deal more liberally with their sons and daughters. It would be unwise to make little of the privileges and attractions now in existence in the Maritime Provinces.

W. S. Fisher, of St. John, remarked that he felt sure there were one hundred factories in the provinces now busily selling to the west. Amherst had done wonders. What had been done by Amherst could be done by others. The right sort of men had been at work in Amherst. He referred to the excellent paper of Mr. Regan, and wished to explain that the chief reason for the provinces not being boomed was because no literature had been supplied agents who were in the immigration work.

Captain Read explained that the local Governments had taken up this matter of advertising the provinces. He felt that the movement of the people west was a removal of the generative forces as all the young men were flitting west and the old men were left behind.

Mr. Armstrong, of Yarmouth, pointed out that the Government had recently appointed a representative agent in Boston.

The general motion was put and carried with only one dissenting voice.

Population in the Bay Counties.

The next question was that of a possible remedy for the decrease of population in the counties of Nova Scotia bordering on the Bay of Fundy.

W. H. Reid, of Berwick, spoke, and the reason he gave for the decrease was that sheep raising did not pay down in his district.

A. E. Atlee, of Annapolis Royal, read an interesting paper on the retaining of the young men in the east. This paper had been read at the Annapolis, Hants and Kings Boards of Trade, and referred to industries affecting population and their remedies. Mr. Atlee said in part:

Industries Involved.

"The fishing interest out of Gloucester, Mass., yearly draws upon Nova Scotia for men, and it has now become a common practice for a Nova Scotian to take out American papers of naturalization, and sailing in a vessel under

United States registration, fish in Canadian waters and land the catch in the United States. Natives of Annapolis County are occupied in this business, and many so engaged take up their residence abroad.

"The call for men for lumbering in the State of Maine and in New Brunswick at high wages for a short time attracts many of our working men, and lately Nova Scotia operators have undertaken operations in Newfoundland and Labrador, and our working men have gone there.

"The development of the coal and iron industry in Cape Breton calls for more men (of a class) than Nova Scotia can supply.

"The decline of wooden shipbuilding has seriously affected the population.

The Remedies.

"The fishing and fishing rights of Canada should be exclusively Canadian. The abrogation of the modus vivendi should be brought about as soon as possible.

"The preservation of our forests, better and more careful manufacture of wood products, without the enormous waste that has taken place in former years.

"The development of iron and gypsum mines in Annapolis and Hants counties.

"While large wooden vessels cannot now compete with steel there is an urgent call for smaller sail tonnage, and a hopeful revival in building this class of wooden vessels and also small steamers. I believe wooden propellers are safer and better adapted to our coastwise trade than steamers built of iron or steel, and that this may also be applicable to the coal trade between Cape Breton and Nova Scotia ports and for trading up the St. Lawrence.

Co-operative Farming.

"In farming the co-operative idea should give good results in holding our population. Co-operative apple packing and shipping would give employment at distributing points in the Annapolis Valley and lead to the establishment of factories for using waste stock for vinegar, cider, and evaporated fruits. If every farm could be put on a self-sustaining basis it would hold many of the young men who now leave the province. Too many farmers buy instead of raising their live stock and import feed and grain that should be grown on our own lands. I contend that there should be on the majority of farms sufficient wood growth to supply all needs for fuel, fencing, barrel and box cooperage.

"I would point out that the boy on the farm is too often driven away instead of encouraged to work at home, and that the opportunity to do good work for honest pay is entirely withheld or discouraged. Let a farmer's son have an interest in the home farm, let him be paid for his work or share in the profits, and we will hold many that now leave the province as soon as they can get away.

"To encourage immigration and increase our valley population, it is a prime necessity that there should be an established market value for farm products. In the past trading has been hampered and business turned in other directions because buyers have had to make their own prices and spend a great deal of unnecessary time to fill orders. The farmers of Hants, Kings and Annapolis counties should consider this matter seriously. There should be a regular market price for hay, cattle, butter, eggs, cheese, apples, etc. To fill an order for a thousand tons of hay should be a transaction that could be done in a day. I venture to say that it would take weeks, and much of this time wasted, to fill an order of this kind. This state of things is discouraging to both growers and buyers, and is detrimental to intending buyers of farm properties.

Value of Sentiment.

"When a stranger comes to reside amongst us or a new industry starts up, it should not be our part to stand ready to shy ' 'arf a brick' at the first chance. A community can be either for or against, in sentiment, in money matters or in work. Sentiment alone can kill what might otherwise turn out to be a prosperous undertaking with the very slightest encouragement.

"Another point—if we are to increase our population we must give employment. If every merchant in every town in the three counties engaged sufficient and efficient help to conduct his business in the most up-to-date manner, and if manufacturers and employers of labor made an effort to keep all their employes fully engaged all the time; if every well-to-do farmer employed men or boys so that every acre of his farm would give its proper return, would it not give work to ten times as many hands as are now engaged?

"How many of us know the merchant whose book-keeping is faulty, and his inability to supply what we are anxiously willing to buy; the manufacturer who seldom or never is up to time with his orders; the farmer with mistaken ideas of economy whose lands lie untilled and he is 'land poor.' Find work, give work, make work. Let those who have not tried it begin now, and we will have hopes of holding the rising generation in the counties of Annapolis, Kings and Hants."

At the London Congress.

A. M. Bell, of Halifax, was called upon to tell the convention of his experience in the Old Country at the Congress of the Chambers of Commerce in London, Eng.

Senator Ross then spoke upon the abrogation of the modus vivendi. Bait in fishing, he said, was the most important part of the industry. The fact that American fishermen took away the best bait from Nova Scotia injured the industry. In Newfoundland the American fishermen were compelled to get bait outside. Then came the opposite question. Americans made easier conditions for getting fish into the United States for those who served them well. Speaking for himself he believed in reciprocity with the United States. Another view was that the herring which the Americans wanted for bait were not much sought for eating purposes in Nova Scotia, and the selling of it to the Americans gave a living to poor people. Still another plea was that the British Government was not anxious to stir up any ill-feeling with the United States. Now if this abrogation were to be brought about, it must come through the Dominion Government. The Government, he knew, was not anxious to excite any ill-feeling with the United States.

A resolution was presented that the board urge upon the Government the abrogation of the modus vivendi.

Mr. Whitmore, of Canso, said that he believed it would be unwise to abrogate the treaty. He believed there was a large class who made a living by selling bait. It looked to him like class legislation. The privilege of selling to the American fishermen should not be taken away. This was good business to sell bait as well as supplies to the American fishermen. It would be impossible to prevent the Americans from catching fish. Their market was too great to be ignored. If we antagonized the Americans we would meet with reprisals later on that would be detrimental.

Fishing Grounds Being Depleted.

Prof. W. W. Andrews thought that reports showed that our fishing grounds were fast being depleted. We had lost our forest assets; were there chances of losing the fish? Surely bait could be sold to Canadian fishermen.

W. F. Humphrey said that information should be given as to how much in value was the bait sold to Americans; how much fish were caught by the Americans, etc.

Senator Ross said he believed that the ocean was as prolific in fish to-day as it was 100 years ago.

Mr. Whitmore said that Newfoundland was on the point of making a reciprocity treaty with the United States. He did not think it would be a shrewd thing to abrogate the treaty.

Mr. Birch, of Prince Edward Island, argued that the Americans protected their industries and we should protect ours. Canadians could give as much for bait as the Americans. The abrogation of the treaty would give all fishermen better chances. He referred to the rigid duty restrictions of the American buyers.

J. McKeen said there was a good deal to be said on both sides of this question and he would deprecate the board taking any action that would commit them to any drastic measure. Likely any resolution would irritate rather than do good.

It was moved and seconded that this matter be left on the table. It was moved in amendment and adopted that a committee of five be appointed to study the question and report upon it at the next annual meeting.

Union With West Indies.

The union of the West Indies and Canada was the next subject taken up. It was brought forward by the Board of Trade of St. John.

W. S. Fisher spoke first. He explained that last year a resolution had been passed urging closer relations between Canada and the West Indies. He asked the meeting to reaffirm the resolution of last year and allow the committee to keep on working towards this union of West India and Canada.

Mr. Fisher was of the opinion that there were many possibilities for trade in the union of the West Indies and the Dominion. It was purely for trade advantages. He had noted that the press deprecated the union owing to the difference in races, etc. The Americans were after the West Indies and Canadians should be awake to their interests and opportunities in the British West Indian trade. The sentiment now was strong in the Indies in favor of British connection and it was wise to make a live issue of the subject.

The speaker's remarks aroused great applause.

Seconding the motion Mr. Elderkin

said the United States were only too anxious to annex these British islands in the Caribbean Sea, and he could not see why the Government was so apathetic. He believed a delegation should be named of men who would go to Ottawa and bring the subject before the Government in the right way.

An Opposite View.

I. C. Stewart, of Halifax, said he was opposed to Mr. Fisher's views and he was sorry they could not agree. The industrial conditions of the West Indies were being improved by Sir Daniel Morris, the Commissioner of Agriculture, and no fears of hopeless decline need be entertained. The British West Indies now grew cotton, the finest cotton in the world. The Barbadoes were also much improved and the outlook was that Great Britain would be the great market for cotton and other products.

He felt that before the board passed any resolution every member should know more about industrial conditions in the Indies. He would suggest that they get a report upon the Indies and especially what the people there thought of union with Canada.

Mr. Fisher claimed that Mr. Stewart's statement regarding the growth of the Indies was an argument in favor of union.

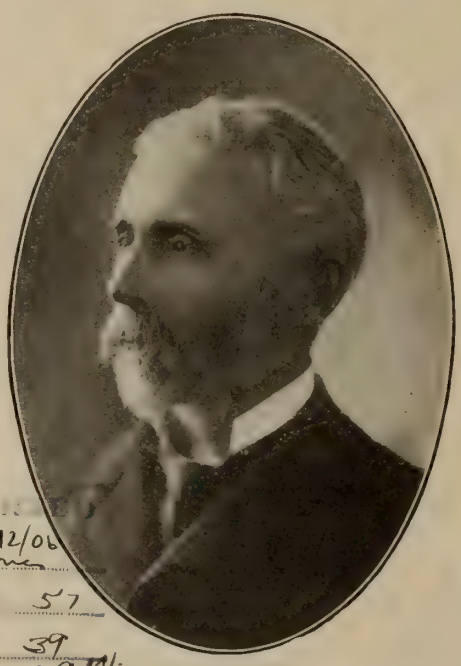
Mr. De Wolfe said that the Government of Canada was opposed to union with the Indies.

A Public Benefactor.

A letter was read from John Williams, of Worcester, Mass., in which he stated that he had advertised the attractiveness of the Maritime Provinces for tourists.

Mr. Armstrong, the delegate from Yarmouth, stated that he knew Mr. Williams well, and that he was deserving of a vote of thanks. This was passed unanimously.

Mr. Fisher broached the subject of union of the West Indies and Canada at the evening session. The motion of Mr. Fisher was carried.



Immigration and Publicity.

The motions of Sydney delegate and the Halifax Board of Trade council regarding immigration and publicity had been considered as dealing with practically one subject and a committee which had been appointed to draft a new resolution brought in the following:

"Resolved, that the respective local Governments of the Maritime Provinces be memorialized to establish a provincial bureau of industry, publicity and immigration, to collect and tabulate detailed information as to cost, extent, description and location of vacant lands available for settlement, local labor supply, opportunities for industrial development, etc., etc., and have this and similar data printed together with suitable illustrated literature and other reliable printed matter relating to the resources of the provinces, circulated through competent channels; and also, that the agents of the provinces and of the Dominion in the United States and in Great Britain be requested to take active steps to distribute this material in quarters where it will do the most good; and further resolved, that such immigrants to Canada as may desire it be given an opportunity to land at a Maritime Province port at all times."

Union of the Provinces.

Mr. Maxwell, of St. John, advocated the union of the Maritime Provinces into one and moved: "That this board reaffirm its attitude of a year ago regarding the desirability of a union of the three provinces and that the executives for the ensuing year urge upon each Government that the matter be taken up for consideration at an early date." He argued in support of his contention that as years went by, there would be a reduction of Parliamentary membership. This had happened in Prince Edward Island, and it would happen in all the provinces. The unit of membership in Quebec at 65, according to the area of miles would affect the membership in all the provinces as Quebec had increased in area. The chances were that the Maritime Provinces would be continuously decreased in representation in the Federal House. He thought the name Acadia—a good Scotch name—might do well for a Federal name for a union of

JOHN McKEEN,
Manager Bank of Nova Scotia and President of the Amherst Board of Trade, who contributed much to the entertainment of the delegates at recent convention in Amherst.

the three provinces. It would be a great economy to centralize the Government of the Maritime Provinces.

Senator Ross said the most serious question was the reduction of representation in the House. He believed the influence of a united province would be greater at Ottawa. It was a subject worthy of discussion by the Attorney-General of each province. He favored the union. (Applause.)

Mr. Stewart claimed that the basic principle of representation was on population. The population of the east did not increase and of course representation must decrease. The decrease of membership was a question which must be faced. He was in favor of Maritime union but not on the ground of decrease in membership. The chief ground would be economy and increased influence.

Captain Read pointed out that this argument would not hold in Prince Edward Island. There they had 25,000 more population than when they had six members and they now had four members. Under the present governmental conditions there were no provincial rights.

The motion in favor of Maritime union was carried.

The Dyke Lands.

The improvement of dyke lands in Sackville was the next subject considered. Prof. Andrews spoke of the importance of increasing and improving natural resources

The following resolution was submitted by Prof. Andrews and seconded by Mr. Stewart: "That the Maritime Board express its approval of all efforts which may be made to increase the yield of the dyked lands of the Bay of Fundy and thus add to the productive power of these provinces, and therefore its population."

TRANSPORTATION IN CANADA.

H. F. McDougall, of Sydney, C.B., read the following paper on "The Transportation Needs of Canada, Grain, Coal, Iron and Steel Products:"

The great and urgent need for an improved system of transportation for the carrying inward and outward the product of the important and rapidly growing industries of the country is at the present time the most serious and most far reaching, as well as complicated, problem before the Canadian people.

There is neither complaint nor dispute as to the fact that Canada has for the past twenty-five years kept pace with the most prosperous and advanced of its contemporaries in providing facilities by land and water for its growing trade and industries. The very large expenditures on railways, canals and steamboat lines, added to which other very large indirect expenditures such as light, dock and harbor service, make up a total in the neighborhood of about $200,000,000—much in excess of that which reasonably could be expected of a small population spread over a very large territory.

Great Results Attained.

The fruits of those expenditures, however, have now reached a point of development far in advance of the expectations of the most ardent and sanguine advocates of those expenditures. In one item alone, that of grain, the product of that industry last year reached $100,000,000 in value, all of which was grown in a comparatively small portion of a vast area of country but a few years ago considered by a large portion of our people nothing but a waste and barren territory. The value of the present annual production of a small part of this great territory in grain alone would be sufficient to wipe out the whole public debt of Canada in less than 3 years. The rate of progress of further advancement in this industry in evidence at present, would justify an increase of over 100 per cent. in less than 10 years.

Looking Ahead.

Canada in ten years will be producing two hundred million bushels of wheat alone. The problem of transportation, therefore, is a most serious one, and one which needs immediate consideration. Heretofore the transportation of grain from the west over the C.P.R. has been nearly all together transhipped into lake shipping at Fort William and Port Arthur, at the head

of Lake Superior, a portion of which was carried to ports on the Ontario lakes and therefrom carried by rail to different points in Ontario, Montreal and Quebec. A portion came down by Detroit and the system of canals extending from Lake Erie to Montreal and a portion went to Buffalo and other points in the United States for transshipment to European markets. The Canada Atlantic Railway carried a large portion of this grain from Parry Sound on the Georgian Bay to Montreal, but the system is circuitous and not by any means equipped for the handling of so large a traffic nor are the other railways with terminals on the lakes any better equipped with such facilities as should be required for the handling of so large a traffic with the expedition its importance demands in this growing line of transcontinental traffic. While specially adapted for the conditions that obtain for interprovincial and local traffic they fall far short of present requirements of the traffic that now offers for placing the products of the Great West at the distant market with that expedition called for by reason of climatic and geographical conditions. Expedition, therefore, is of necessity the principal factor in this problem, made urgent by a combination of natural disadvantages, chiefly that of the short season between the date when the grain is ready to move and the date of closing of navigation in the Great Lakes and St. Lawrence, and the long distance over which it is necessary to carry these products to reach open Atlantic ports in Canada in Winter.

Facilities Between East and West.

In order to overcome those difficulties, in a measure at least, and to meet the demands for increased transportation facilities between the west and the east, strong appeals have been made for the deepening of the canals between Montreal and the upper lakes. A proposition has been before Parliament for several years for the building of the Georgian Bay Canal, a system of stream navigation and several canals extending from Montreal by way of the Ottawa River and small lake waters extending to Georgian Bay on the Great Lakes. One very great difficulty in respect to those canal improvements is the long time before any relief could be obtained from this plan and other difficulties would be found in their very slow services, as well as in their imperfect connections.

First Consideration.

The first question to be considered is the fact that there must be an immense grain production henceforth in the Western Provinces of Canada and the great bulk of that grain must find its way to the Atlantic seaboard at the earliest possible date after being ready to move from the fields of production.

The second is that this part of the transportation must be done within about three months to escape Winter conditions, which practically close navigation on the St. Lawrence, as well as on the Great Lakes, by the first of December. The interest of the producer and the grain dealer in Canada would require at least one-half the product to find its way to markets beyond the handicap points within those three months before the close of navigation, with the remaining half to be forwarded via St. John, Halifax and Sydney ports during Winter, to be partly used in the supplying of home markets and partly for Summer export beginning in April or May.

Reserve National Channels of Trade.

The third is that, although for a longer period of the year shipments destined for European markets could find their way through the United States to the seaboard, the difference is not so great as to justify the abandonment of a policy so important and national in its character from various points of view, as that of maintaining the channels of trade and transportation within Canadian territory.

The fourth is that we have now a complete railway system from east to west, and that that system in handling this class of freight finds it necessary to drop the greater portion of it at Fort William and Port Arthur to be carried across the lakes, thence across the country to the St. Lawrence, instead of continuing over the additional distance of a thousand miles from Port Arthur to Montreal, or other points at longer distance on the St. Lawrence. That the two lines of railway now under construction between the east and the west are likely, on account of natural conditions of competition, to reduce the cost of haul to the terminals at the head of the Great Lakes and correspondingly lessen the practicability of any appreciable increase in the quantity to be carried over the new roads from head of the Great Lakes to the St. Lawrence which, owing to their further northern location, have to cover longer distances in reaching the St. Lawrence. Essentially those new lines east of the head of the Great Lakes must exist on passenger, mineral and timber traffic, with such ordinary colonization development as the country being opened up will be found adapted to.

Question of Transportation.

The question, therefore, resolves itself into the position of Canada for the purpose of trade having to have recourse to such means as will improve and cheapen its system of transportation from the head of the lakes to a point on the Georgian Bay, thence by rail across the Ontario peninsula to the St. Lawrence at or near Montreal, where the final transfer can be made to ocean steamers. This system would secure to this branch of the trade of the country the very best possible results during the three months immediately following the date when the first grain is ready to move. The Great Lakes navigation being open for nearly a month later would make it possible to continue those shipments during that time partly for domestic or inland markets and partly for export during Winter from St. John, Halifax and Sydney.

Montreal to Georgian Bay.

An air line of double track railway from Montreal to the nearest navigable point on the Georgian Bay, equipped with the most modern and perfect service for carrying and handling this class of freight, with docks and elevator facilities adapted to the handling in the quickest possible time the largest possible quantity of this class of freight, would necessarily call for a very much improved system of both elevator and dock facilities than exist under present conditions, but only such as would be warranted by the results that naturally would flow from the alternating of a number of broken and inadequate as well as antiquated services into a consolidated and enlarged modern service with expedition and cheapening of cost the chief objects in view.

The Coal Trade.

An important auxiliary to this trade is made possible by conditions not unlike those that handicap the free movement of the grain trade of Canada, that militate against the continuous development of the great coal industry of the country. The coal deposits of the Dominion, so far as these are in a state of development, are located east of the Province of New Brunswick and west of Manitoba, and the intervening portion of the country extending over 2,500 miles have to draw their coal supply over long distances from the two extremes or take their supply from the United States. At present Ontario is nearly all supplied from the United States, and Quebec nearly all from Nova Scotia.

The navigation of the St. Lawrence for deep sea shipping for six months of the year makes it possible for the coal of Nova Scotia to reach Montreal at a reasonable cost, a cost which, with the assistance of return cargoes that could be handled without detention, could be considerably reduced. In the County of Cape Breton there is mined annually about 4,000,000 tons of coal, about 3,000,000 of which finds its way up the St. Lawrence during the six months of open navigation in the St. Lawrence. The Province of Ontario consumes annually about 4,000,000 tons, and it is nearly all imported from the United States, about half being hard coal and not obtainable from Nova Scotia. Of the remaining 2,000,000 tons Nova Scotia, with an improved system of transportation and handling, should supply 1,000,000 tons at least during open navigation.

The Western Crop.

The same railway service that conveys the grain from the Great Lake points in Ontario should be made, with very little additional cost, adapted to the hauling of this coal from Montreal to within reach of the great centres of industry within the Province of Ontario. Much of the coal that comes from the United States into Ontario now comes by water to certain points and thence into the interior of the country by rail, which is accomplished with very inferior and expensive equipment, whereas the handling from vessel to rail at one point like Montreal could be done with the aid of the most modern coal handling appliances. Coal can be handled and stored much on the same principle as grain, by means of labor-saving appliances and modern methods. The trade once established through channels with strong guarantee for permanency such as the one proposed would justify permanent appliances for handling the product such as are now established at the shipping points of the operators and to some extent at Montreal.

First Requirements of the System.

First requisites for carrying out the proposed improved system of transpor-

tation of the chief products referred to, namely, grain, coal and iron and steel products :

A fleet of steamers to carry grain from the head of the Great Lakes to eastern points on the Georgian Bay in Ontario.

An air line double track railway from a point on the Georgian Bay over the most direct and shortest route to the City of Montreal.

A fleet of steamers to carry grain from Montreal to European points and from Montreal to Sydney, and return cargoes of coal to Montreal and points on the St. Lawrence.

Modern elevator, storage and transhipping equipment at Port Arthur, Fort William, and at a point on the Georgian Bay, Ontario; Montreal, Quebec; St. John, N.B.; Halifax, and Sydney, Nova Scotia.

A ship building plant and docks in the harbor of Sydney, Nova Scotia and at Halifax.

Milling plants at Georgian Bay point, Montreal, St. John, Halifax and Sydney.

Tendency of grain trade is growing more in favor of exporting the finished product and retain the off takes for the production of dairy and meat products.

Comparative value of grain shipments moving east from Port Arthur and Fort William, 1904 and 1905 :

In 1904 grain shipments moved from Fort William and Port Arthur amounted in value to $17,117,221.10, of which $14,302,086 was moved in Canadian vessels, chiefly to Owen Sound, Midland, Depot Harbor, Godench, Montreal, Toronto, and other points, on the Ontario lakes and shores of the St. Lawrence, while $2,724,135.10 was moved in United States vessels to Buffalo and Detroit.

During the past year (1905) this trade was increased to $19,139,184.20 carried in Canadian vessels to Canadian ports, and to $11,137,089 carried by United States vessels to United States points, and $81,793.10 carried in United States vessels to Port Huron, in Canada. Thus it will be seen that nearly all the increase of shipments of 1905 over 1904 found its way from Port Arthur and Fort William in United States vessels and to United States ports because Canadian owners were unable to handle it.

Important Facts.

Coal Production of Nova Scotia. — Annual coal production of Nova Scotia, about 5,000,000 tons, of which about 70 per cent. is mined and delivered for consumption and shipment in the harbor of Sydney, C.B.

Shipping Tonnage Employed.—Tonnage now employed to perform waterborn business of Canada is over 80,000,000 tons; at the present rate of increase 100,000,000 tons will be required sooner than it will be convenient to supply it from Canadian shipyards.

Shipping Owned.—Canada in ownership of shipping stands seventh in the world, Great Britain, United States, Germany, Norway and France being ahead in order.

Steel Ship Building.—Changed conditions in the iron and steel trade and increased demand for carrying tonnage must force Canada into steel ship building on a larger scale than at present. Twenty years ago 90 per cent. of the pig iron used was imported; at present less than 35 per cent. is imported.

Relative Shipping in Six Canadian Ports

Statement of arrivals of sailing and steam vessels at following ports for the year ending June 30, 1904 :

	Vessels.	Tons.Reg
Montreal :		
From sea	430	1,311,348

	3,600	1,446,546

The Scheme Approved.

The reading of the paper was received with many marks of appreciation and at its conclusion S. P. Challoner, Sydney, seconded by Hon. Senator Ross, Halifax, moved :

Resolved, That an important system of transportation affecting the shipments of wheat from Western Canada over the Great Lakes and from the lakes at a point on the Georgian Bay to Montreal, for shipment by the St. Lawrence route during open navigation and by rail to St. John, Halifax and Sydney, after close of St. Lawrence navigation, and for the carrying of coal west, such as is outlined and advocated in a paper read before this board by H. F. McDougall, representing the Sydney Board of Trade, hereby receive the approval of this board.

The motion was carried unanimously.

Winter Route to P. E. I.

Hon. Geo. Hughes, of Charlottetown, P.E.I., moved that "Whereas, the Winter communication between Prince Edward Island and the mainland is still in a most unsatisfactory condition, therefore resolved, that this, the Maritime Board of Trade, urge upon the Hon. the Minister of Marine and Fisheries the great necessity of placing a more powerful boat than the Minto or Stanley in the Straits of Northumberland this Winter for the purpose of ascertaining the most practicable route for Winter navigation between Prince Edward Island and the mainland."

The motion was carried.

Freight Rates Too High.

It was moved by W. H. Dennis, of Prince Edward Island, seconded by J. E. Birch that "Whereas, the freight rates on the Intercolonial and Prince Edward Island railways are excessive as they now stand and detrimental to the best interests of these provinces, therefore, resolved, that the Minister of Railways be requested to reduce the said scale of rates to those in effect on these roads in 1905." Carried.

Mr. Hughes read the resolution regarding freight rates which was passed at the meeting in Moncton, N.B., in August, 1904, and moved "that this Maritime Board of Trade, now in convention assembled, re-affirm the above resolution and urge upon the Federal Government the necessity of adopting means to carry the same into immediate effect, thus placing shippers to and from Prince Edward Island on the same footing as those from Cape Breton Island and the Island of Vancouver."

A West End P. E. I. Boat.

J. E. Birch, Alberton and West Prince Board of Trade, moved, seconded by Prof. Andrews, "that one of the steamers employed between Prince Edward Island and the mainland for the purpose of inter-provincial communication in Winter be placed on what is known as the western route, so that the advantages of direct communication with the west be as often as possible afforded to the public."

The motion was carried.

The Fish Industry.

The following resolution proposed by C. H. Whitman, of Canso, and seconded by Rev. Father Burke, was carried :

"Whereas, the fresh fish business of the Maritime Provinces is already an important industry and is destined to be one of the leading industries of Canada, for this reason it being important that the railroads should be in the closest possible touch with the sources of supply ; therefore, resolved, that in the opinion of this board the Dominion and local Governments in the making of any future contracts for railway extension should insist upon the main sources of fish supply being included in any such extension where at all possible.

"Resolved also, that for the better encouragement of deep sea fisheries the Government of Canada should readjust the conditions warranting the reception of fishing bounties, so as to make the lobster period count in determining the time and quantity requisite for same."

Back up the Commission.

A. M. Bell, of Halifax, spoke on transportation. It was a mistake, he thought, to boom Montreal as a port for freight and mail. Montreal and St. John were good ports for distributing freight, but for mails and passengers he was in favor of Halifax and Sydney and other Maritime extremities. In advocating a route he must submit to modern engineering and all the arguments regarding ports were relative from the point of view of engineers. Mr. Bell proposed the following resolution based on a recent report of the Transportation Commission. This was seconded by Mr. Bentley, of Truro, N.S. :

"Whereas, the report of the Royal Transportation Commission in dealing with the requirements of the Maritime Provinces makes the following recommendations :

"(1) That the grades and curves on the Intercolonial Railway between Moncton and the Atlantic ports be as far as possible reduced in order to secure faster and cheaper transportation ;

"(2) That the Grand Trunk Pacific between Quebec and Moncton be built by the most direct route;

"(3) That equitable running rights be secured by the Intercolonial over the Grand Trunk system between Montreal and the Great Lakes; and also that similar rights be given the Grand Trunk Pacific over the Intercolonial between the Atlantic ports of the Maritime Provinces and Moncton.

"(4) That it is in the interests of Canada and the Empire that a high-class fast mail, passenger and express service be established to run semi-weekly between Halifax and Liverpool.

"(5) Be it therefore resolved, that the foregoing recommendations, being in line with the declared policy of providing Canadian routes for the carriage of Canadian products are cordially endorsed by this board, and the Federal Government are hereby urged to carry them out in the interests not only of the Maritime Provinces but of the whole country."

Remember St. John and Sydney.

Mr. Hathway, of St. John, criticized the proposed resolution and said the members of the Transportation Commission from Winnipeg had shown a lack of knowledge of eastern conditions. St. John and Sydney should be in that resolution.

H. McDougall did not like to see the resolution hurried through as it was. At Sydney there were two ports but there was only one harbor. North Sydney was one port and Sydney another. The port was open from one end of the year to the other during some years. It was not safe to say it was an open port.

Prof. Andrews thought Mr. Bell in behalf of Halifax had spoken in a broad-minded way on this question and the question was which would be the point of mail call, Halifax, St. John or Sydney. It was a Canadian matter and should be looked at in a broad Canadian way.

Mr. Hathway proposed, seconded by M. H. Thorne, of St. John, an amendment to Mr. Bell's resolution.

Captain Read would not allow the resolution to be put as an amendment. He ruled that it was a substitution, not an amendment.

J. S. Campbell, of Halifax, spoke in defence of Mr. Bell's resolution and elaborated on the problem in sight over the question of transportation.

W. H. Thorne, of St. John, spoke on the question of Halifax and St. John men coming together. They had tried this. The St. John men could not see eye to eye with Halifax men. St. John men objected to the Grand Trunk Pacific scheme. Direct connection to St. John should have been allowed, and owing to the G.T.P. scheme the representative in the cabinet from St. John resigned. St. John further thought that as the mail service had been divided, St. John should be considered.

Mr. Stewart moved in amendment that clause 2 be eliminated from the main resolution.

Mr. Fisher explained that St. John was not jealous of Halifax. They wanted to have a just share in the resolution. The St. John men were willing to concede a great deal, but it was impossible to vote for the resolution as it stood.

Hon. Mr. Hughes extended an invitation to the board to meet next year at Charlottetown.

Mr. Sumner, of Moncton, spoke as an unprejudiced man, and said he thought the resolution should go through as it stood.

The amendment was put and lost by a large majority.

Mail at North Sydney.

It was then moved by Mr. Challoner and seconded by A. M. Bell, that the following new clause be added to the original resolution and the whole offered as an amendment.

Hon. J. N. Armstrong, of North Sydney, suggested a further addition to the main resolution. Mr. Challoner and Mr. Bell, as well as Mr. Bentley, the seconder of the original motion, all agreed to this. After much parleying over parliamentary usage the question was put and carried with this addition:

"Further resolved, that as the contract entered into by the Dominion Government for the carrying of the mails places the option of the Minister of Trade and Commerce of obliging the subsidized mail and passenger steamers that make their terminus at Quebec and Montreal to call at North Sydney; that it is desirable in the opinion of this Maritime Board of Trade, particularly in the interests of the Maritime Provinces, and generally of all Canada, that the option of the minister should be exercised so that the mail steamers call at North Sydney accordingly."

The New Officers.

The committee to nominate officers, comprised of M. G. De Wolfe, Rev. A. E. Burke, W. F. Hathway and N. T. Weldon, reported as follows: President, W. S. Fisher; first vice-president, A. M. Bell; second vice-president, Hon. Geo. E. Hughes, Charlottetown; secretary-treasurer, Chas. M. Creed, Halifax; auditor, G. M. De Wolfe, Kentville; recording secretary, M. Anderson, Halifax.

The report was approved unanimously. Mr. Fisher was congratulated warmly upon his election and all the other officers received similar greetings.

A Pleasant Outing.

The afternoon was occupied by an automobile drive to the Chignecto mines, and most of the delegates participated. The Board of Trade of Amherst were the hosts. After inspecting the mines and enjoying an ideal drive on a perfect road with finest of weather, a stop was made at the Government experimental farm.

There a band was playing and the ladies of Amherst had prepared the best of refreshments, which were served on the beautiful lawn.

When the meal was over the guests assembled in front of the house and a photograph was taken of a group of 150 at least, including as many of the ladies as wished. Speeches of appreciation and welcome were made by the different officers of the boards of trade and by R. Robertson, head of the farm. Cheers were given for Amherst, the ladies, and the boards of trade.

In driving back to the city the electric illumination of the Rhodes-Curry Co.'s factory was a feature that attracted attention.

The board of trade after its holiday resumed sessions promptly at 8.30, even before all the delegates had returned.

Help for Railroad.

Thos. Keiler, delegate from Queens, set the bal. rolling by a report regarding a new railway from Digby to Liverpool.

The following resolution was adopted: Moved by T. Keiler, and seconded by W. M. Jarvis, "That the Government be urged to grant adequate financial assistance to any company that will build a railroad from Liverpool, in the County of Queens, to Digby, in the County of Digby, by way of Caledonia and Bear River, thereby affording railway connection to a section of Nova Scotia which is now without such connection and placing the towns along the route of the proposed railway on more equal terms with other parts of the province."

A paper on "Shipping, Old and New," was read by F. McDougall, of Moncton. He spoke highly of Nova Scotia and New Brunswick sailors. All over the world Nova Scotia sailors were in demand. They, he claimed, were the best sailors in the world.

A motion by Father Burke and Hon. G. E. Hughes was passed that the expression of the board on the P.E.I. tunnel passed last year be reaffirmed.

To Revive Shipping.

In connection with the shipping paper, the following resolution, offered by the Moncton Board of Trade, was adopted:

"As it is of the first importance to the Maritime interests of Canada that we should secure and hold a place in transportation by sea, therefore, to revive our fast declining shipping industry it is desirable to promote Canadian ship owning under the new conditions now prevailing; moreover, as supplementary or corollary to this, it is necessary that Canada should have the power to limit the coasting privileges now enjoyed by European nations;

"Therefore, resolved, that in the opinion of this board the Dominion Government should first pass a ships subsidy bill for the promotion of sea-going Canadian owned tonnage, and second, take such steps as will secure for Canada the privilege of cancelling existing coasting privileges now enjoyed by foreign countries under old Imperial treaties, the idea being to have Canada control these treaties as we control our tariff."

H. F. McDougall, of Cape Breton, suggested an addition to the resolution to the effect that a recommendation might be made to the Government asking for support to the industry of building wood and iron ships.

Want M. P.'s to Attend.

It was moved by Prof. Andrews and seconded by Hon. G. E. Hughes, and resolved, that the secretary notify all provincial representatives in the Federal Parliament that it is the desire of the Maritime Board of Trade that they attend the annual meetings of the board and take part in the proceedings.

Lower Postal Rates.

The question of reduced postal rates was dealt with unanimously in a resolution put forward by J. L. Stewart, of Chatham, N.B., and seconded by W. L. T. Weldon, as follows:

"Whereas, although letter postage has been reduced, the rates on some other postal matter, particularly miscellaneous printed matter, has been materially increased;

"And whereas, the postal revenue has so greatly increased that a surplus has been reported by the department;

"Therefore, resolved, that in the opinion of this Maritime Board of Trade these increased rates should be reduced to at least the rates that prevailed before the increase was made."

Technical Education.

The subject of technical education was dealt with by A. A. Hayward, of the Mining Institute of Halifax, in the following resolution :

"Whereas, the commercial and industrial success of the foremost nations of the world at present has been in a large measure due to technical education in equipping the men of these nations to better develop their natural resources ;

"And whereas, individuals, communities and national governments are supporting technical institutions in all parts of the world ;

"And whereas, the great natural resources of these Maritime Provinces demand technically trained men for their more efficient and complete development ;

"And whereas, the industrial trend of the age demands that our young men should have an opportunity to acquire the highest technical training within their own borders at a moderate cost to themselves ;

"And whereas, a sum of money more than large enough to support local technical institutions is annually paid to alien institutions by students from the Maritime Provinces ;

"And whereas, higher technical institutions, situated in the Maritime Provinces, would be best able to cope with the industrial problems of this eastern section of the Dominion of Canada ;

"And whereas, delegates from Nova Scotia colleges and from Mount Allison of New Brunswick, assembled in Halifax, April 19, 1906, to discuss better and more efficient means of technical education, endorsed the facts already outlined and promised their hearty co-operation, and requested the Government of Nova Scotia to enact such measures as would bring about the establishment of such an institution as the conditions demand ;

"Therefore be it resolved, that it is necessary that higher technical institutions should be established in each Maritime Province, equipped with such laboratories and instructors for teaching and research as the local needs demand ;

"Further resolved, that this Maritime Board of Trade recognizes the importance of greater facilities for higher and more complete technical education at home, and pledges itself to do all in its power to promote the establishment of institutions that will more fully equip our young men to develop our great natural resources and place these provinces in a better position to share in the industrial prosperity of the age.

"Resolved also, that this Maritime Board recommend to each local board of trade that on account of the paramount importance of the subject, it be made a matter of discussion at least at one meeting of each board of trade during the year in the hope that the interest of our people be thoroughly aroused in this matter so vital to the continued industrial development of the provinces."

Prof. Andrews spoke upon the resolution and presaged in glowing terms of the magnificent possibilities of the Dominion and the coincident part which technical education would play in this development. He dwelt upon the great need of trade schools in all growing centres, conducted on the lines suited to the existing industries and conditions locally.

Other able speeches were made upon the subject by Mr. Hathway, of St. John, J. McKeen and R. Maxwell, of St. John, and the resolution was carried.

The following resolution submitted by the Truro, N.S., Board of Trade was carried :

"Whereas, by an act of the Legislature of Nova Scotia passed 27th of March, 1902, the incorporated towns of Nova Scotia are deprived of the privilege of granting permission for the opening of streets for the purposes of supplying light, heat and power ;

"Therefore, resolved, that in the opinion of this Maritime Board of Trade the said act should be amended and the incorporated towns of Nova Scotia should be given the privilege of granting permission for such purposes, subject, however, to a majority vote of the ratepayers of any town."

The auditor's report was read and adopted as follows :

Amherst, N.S., August 16, 1906.
The Maritime Board of Trade,
To Charles M. Creed,
Secretary-treasurer.

To general expenses	$ 74.39	
Printing resolutions, circulars, paper, etc.	37.75	
Annual report	70.75	
Secretary's salary	125.00	307.89

Credit.

Balance on hand	$104.62	
Subs. paid	219.85	
Do unpaid	79.30	299.15
		403.77
Balance		$95.88

Examined and found correct.
M. G. De Wolfe,
Auditor.
Amherst, August 16, 1906.

Mr. Creed made a cheerful speech at the conclusion and thanked all the members for kind wishes for him.

Captain Read in concluding the session asked Mr. Fisher to take the chair, and designated him a "worthy successor."

Mr. Fisher spoke briefly thanking the board and stating that he would endeavor to do his best in taking up the work of worthy predecessors.

A vote of thanks was passed to the Board of Trade of Amherst, moved by A. M. Bell and seconded by H. F. McDougall.

Mr. McKeen replied on behalf of Amherst.

M. G. De Wolfe moved a vote of thanks to the MacLean Publishing Co. for their friendly work in connection with the Board of Trade.

The next place of meeting was voted upon and St. John was chosen.

TO BE CANADA'S WINTER PORT

High Ambition of the City of St. John—Its Early History—Landing of the N. E. Loyalists—Some Leaders of its Business Life To-Day.

The town derives its name Saint John from the river which pours into its excellent harbor. The river was named after a great prelate who lived in 1630 when Chas. Le Tour built a fort at the river's mouth. It became the scene of many stirring events. Much romance is found in the history of the district from 1670 to 1713, when the region was ceded by France to England. In 1758 the place was occupied by English soldiers and was called Fort Frederick. In 1762 the first English settlement was made by New Englanders. Three thousand loyalists from New York landed in St. John in 1783, just after the revolutionary war, and in 1785 these men were largely the founders of the city which was granted a charter in that year. The Province of New Brunswick had been formally established a year previous.

St. John as a Trade Centre.

In 1904 Sir Thomas Shaughnessy, president of the C.P.R., said : "With all that may be said upon the subject, the Canadian Winter port must of necessity be at St. John or in that vicinity. There are one or two other points quite close to St. John that could be utilized, but at either of these it would be necessary to start anew and build a port, where there would be none of the advantages of a city of considerable size like St. John."

When work now in progress is completed, the City of St. John will have spent upwards of a million dollars to provide harbor facilities to accommodate the Canadian export and import trade during the period when the St. Lawrence is closed to navigation.

The waterworks system just completed shows an expenditure of two millions to provide a gravitation system of the purest water, having its source in a chain of lakes.

The city has spent $538,000 on a sewerage system. They have a new ferry steamer costing $80,000, connecting the eastern and western sides of the harbor, and it compares favorably with similar craft in Boston and New York. The people are industrious and intelligent. The business men are easy to meet and pleasant to deal with at any time.

A Renowned Harbor.

The harbor is a wonderful place. It has the advantage of being at the mouth of the River St. John. New wharves are to be erected, the Government having let contracts which will be carried out next year. Just now the Federal Government is considering the question of nationalizing the port of St. John. This was recommended by the Transportation Commission in its recent report to the Government.

The city has unrivalled facilities for cheaply gathering raw material, of which lumber, lime, coal and iron are at her doors and others within easy reach by water routes. There are splendid facilities, too, for distributing the finished product. There is an equable climate Winter and Summer and work need not cease because of low temperature.

Exceptional opportunities are available for low freight rates to and from the United Kingdom and South Africa in Winter by regular steamship lines. Summer and Winter services are carried on to Glasgow, Liverpool, London, United States and the Indies.

The city deals liberally with all pro-

moters of bona fide industrial enterprises. With cheap water, moderate insurance rates, efficient fire protection and intelligent labor the city possesses four of the cardinal advantages to attract industrial ventures.

St. John is the Atlantic terminus of the C.P.R. and one of the terminii of the I.C.R. and will be one of the Atlantic terminii of the Grand Trunk Pacific. It is easily the chief Winter port of Canada. It is the chief depot for the fish trade of the Bay of Fundy with fine fish-curing and packing houses for home and foreign trade. There is an estimated population of 50,000 people and St. John has a future that is worth the careful consideration of business men.

T. McAvity & Sons.

Thomas McAvity, founder of the firm of T. McAvity & Sons, was apprenticed to James Hendricks to learn the "art and mysteries" of the ironmongery trade. At Mr. Hendricks' death, in 1835, Mr. McAvity, with his brothers as partners, took over the business on their own account, the style of the firm being T. McAvity & Co. Subsequently the firm name was changed to J. and T. McAvity and after J. McAvity's death Thomas McAvity associated with himself his sons, Jas. H., Thomas, John A., and George, under the firm name of T. McAvity & Sons.

The brass works branch of the business was established in the year of the U.S. Civil War, under the style of The New Brunswick Brass Works.

After the St. John fire in 1877 the firm rebuilt brass works and at the same time re-established their hardware business in the building on King street, which they now occupy.

During the last five years the firm have considerably enlarged and added to their property—the principle addition being the Vulcan Iron Works on Broad street. This branch of the business gives employment to about 100 hands, while in the brass works they employ about 200 people.

The firm manufacture a full line of standard and extra fittings, water works supplies, brass and iron goods for engineers, steamfitters, plumbers and gasfitters.

They supply most of the high pressure plants in Canada, including such firms as : Locomotive Machine Co., Dominion Iron and Steel Works, Dominion Coal Co., Montreal Street Ry., and other representative institutions.

T. McAvity & Sons' Warehouse at St. John.

W. H. Thorne & Co.

No reference could be made to the commercial progress of St. John without mentioning W. H. Thorne & Co., wholesale and retail hardware merchants. They have handsome premises fronting on Market Square. It is one of the largest buildings in the city and is a hive of activity. The business has been established since 1867 and was founded by the president, W. H. Thorne, Esq.

The stock company was formed in 1895, including several long service partners like T. C. Lee, A. T. Thorne and others. They cover the Maritime Provinces as well as Quebec and do a large trade. Their building covers 35,604 feet of flooring, while warehouses on the wharf cover 32,800 feet besides the saw factory, thus showing how extensive their business is.

Campbell Axe Works.

Campbell's XXX Wood Chopper is the leader made by this enterprising company. This axe, they claim, will hold its edge during severest frost and is therefore a most desirable axe for lumbermen. There are two young men in the firm of Campbell Bros., Messrs. G. Wilfrid Campbell and Chas. R. Campbell.

Chas. R. is a practical man and supervises the factory, while his brother hustles after the business end. Their business is constantly increasing and their prospects are bright for the future.

They stake a great deal on the steel they use on the axes, upon the tempering and the soundness of the head. In fact the Messrs. Campbell get a very high price for their XXX Chopper, and the fact that they are selling it proves that there is a demand for high class axes. They are two of St. John's representative young men.

Emerson & Fisher.

In the front rank of the successful and sterling houses of St. John, N.B., and in fact the Maritime Provinces, is that of Emerson & Fisher Co., wholesale and retail hardware merchants. It was founded in 1878 and from small beginnings have developed to their present excellent standing and capacity. The firm is a joint stock company composed of R. B. Emerson, W. S. Fisher, Fred R. Murray and Stanley L. Emerson. They

RETURNED

To Dunn
Cut Book
Page 14

have a magnificent building on Germain street, a few doors from King street, and have a frontage of 60 feet. Needless to say they carry a complete stock and pay prompt and polite attention to every order. It is always a pleasure for the heads of the firm to see anyone, and the staff is patterned after them as far as possible.

Mr. Fisher was chosen president of the Maritime Board of Trade this year and he is an ideal man for the position.

In addition to their extensive jobbing lines and agencies, the company is interested in the Enterprise Foundry Co., of Sackville, where splendid stoves are manufactured which have made a name in the east. Sheet metal goods and heavy pieced tinware are also manufactured and trade is large and continually growing.

The Maritime Nail Co.

"For want of a nail the shoe was lost, for want of a shoe the horse was lost." Who does not remember that old fable which was written long before the Peerless horse nails were on the market. Peerless nails are the evolution of the best brains in the world. They claim they are the supreme expression of the nail maker's art. The story of a limpy horse and a bad foot would have never been written had the discovery which made the Peerless brand possible been on the earth. Well. It is here now. It has been making horses smile and their owners glad for some years. They are manufactured by the Maritime Nail Co. of St. John, N.B., who are a part of the big Capewell Horse Nail Co., which is the largest of its kind in the world. The Maritime company control their individuality just as each one does, but each is a part of the big wheel which is doing so much for the people of this country in improved nails of all descriptions. A glance at the premises in Saint John would indicate a lively place. Blood has been whipped into the industry ever since the present management took charge. Activity to the extent of turning out a ton and a half to two tons per day of nails will give some idea of what is going on. Employment is given to 125 hands and everything is humming. Trade extends everywhere. The old fogey days of forging nails hot have passed away with factory, just as surely as many a handmade boot is away with the forefathers.

Peerless nails are all cold forged. To explain what that means would interest everyone and the trade is invited to communicate with S. E. Elkins, the secretary-treasurer. Mr. Elkins is out for business all the time and the system adopted is almost unbeatable. They send communications to every man of standing who is likely to own a horse or horses, telling in a plain matter of fact way just one thought about the Peerless and its actual and possible value to horse flesh. What is the result? When a man is sent to a blacksmith's shop he asks "Have you the Peerless nail?" There will be a long argument perhaps, when the groom in charge of the horse will say, "The boss told me to get Peerless nails and not to shoe the horse unless you had them. It's then up to the farrier. He knows that times are advancing and the only way to get on is to be up to date or lose his trade.

Peerless nails are high priced. That too, is reasonable because they are highly finished, finished by the hands of experts and machinery unequalled. Then the iron is the best Swedish produced. Not a single consignment will be accepted abroad unless it reaches the standard of excellence required by severe chemical analysis. The nails are sorted and resorted at least four times before they are placed on the market and thoroughness marks every move.

To advertise these nails, the smartest minds have devised ingenious methods. Quick wits have seized on simple things just what the ponderous mind would never see. For instance, they have beautiful silk jockey caps, finished perfectly, with which they supply riders of horses. They have fine linen caps which are suitable for anyone, but the only condition is that on the cap is printed "Peerless Nails." How convincing to the horseman? Then they have nice rock horse covers, branded in large letters on orange background, "Peerless Horse Nails," etc.

Page 15

Probably the greatest compliment that could be paid to the Peerless nails is that when Barnum and Bailey's circus was here they ordered a new supply of Peerless. They have used no others for years.

Owing to the immense demand for the nails the company have been compelled to double their capacity for wire nails and have also increased their machinery for horse nails, in fact, Mr. Elkins stated that they were three months behind on their orders early in August. The company is in every way a credit to St. John.

Outside of the horse nails they manufacture, of course, the Monarch brand wire nails, tacks and rivets which, to any ordinary concern, would be an industry in itself.

J. E. Wilson & Co.

Among the successful business men whom St. John can especially claim as her own is J. E. Wilson, head of the J. E. Wilson Co., whose premises on Sydney street are in every way a credit to the city. The Wilson Co. occupy their own building of five stories and each floor is especially designed for a large trade in stoves, brassware, castings and iron working accessaries. They have also an extensive and up-to-date foundry on Brussel street where they manufacture cast iron work of all description. The business has been established many years, but some time ago it was formed into a joint stock company with Mr. Wilson president and general manager. Prosperity is written all over the premises, while the general activity evidence the abundance of orders.

Personally Mr. Wilson has done much for the promotion of St. John as a trade centre. He served as alderman and was always known for his good judgment and farsighed ability. He has been a candidate for the Provincial House of Parliament and is identified with many public bodies, social, political and beneficent. He is a St. John boy and is known all over the Maritime Provinces.

J. E. Wilson Foundry Co.'s Plant.

Josiah Fowler & Co.

For reliability and character this firm is just like their axes which they sell all over the Dominion, hard to surpass. Since away back in 1865 Mr. Fowler has been making good axes. To-day Josiah Fowler is head of his business, and though an old man, is active and capable, keen to every up-to-date, sensible improvement that will help him to make better axes. He goes out himself to the Pacific coast, and as he says he sells more axes than all the young fellows on the road. A fine plant is required and a large staff is constantly employed. Mr. Fowler is assisted in his business by his son, who is one of the company, and his son-in-law, Mr. Barbour, who is secretary-treasurer of the company.

They also manufacture spiral and eliptical railway springs, chisels and heavy hammers.

James Pender & Co.

This company manufacture wire nails, toe caulks and horse nails, and dates inception to 1877, being for some years carried on under the name of the St. John Horse Nail Works. In 1892 they expanded into a company under the able

direction of James Pender and under the name James Pender & Co., Limited, and have built up an immense business in wire nails. They have a brand, "They never let go," advertised in this issue, which are possessed of the thinly roughened edge which adheres to wood so strongly that practically "they never let go." Some of the largest manufacturers in Montreal and the west use these nails in preference to any others. As for toe caulks, they claim to be the only makers in Canada. Everything "Jim" Pender, as the head of the firm is familiarly known, touches is bound to be well done, and he backs up this reputation in every particular. Their new galvanizing plant is said to be the finest in Canada. Mr. Pender claims it is second to none in America.

Portland Rolling Mills.

These mills are driving away at heavy pace, and Mr. Wm. Bruckhof, the manager, may be credited easily with having pulled a poorly worked business out of a hole and of having placed it on a solid, paying basis. The mills date from 1826. They had their bright days and their dark days. About 14 years ago the present company was formed, absorbing the James Harris Co and S. R. Foster & Sons, of St. John. They now make bar iron of all kinds, car axles, fish plates, angle bars, ship knees, and forgings of all kinds, horse shoes, railway spikes, nails, tacks, and bolts. Their "P.M." brand of horse shoes are sold everywhere in the Dominion, also in the West Indies. They have five buildings in all and require five travelers constantly on the road, employing in all 250 men. Mr. Bruckhof is the backbone of the concern and his brain and energy would inspire the confidence of the most skeptical investor.

Robertson, Foster & Smith.

This firm was formerly Kerr & Robertson, but a few months ago Mr. Kerr dropped out and the new company was formed under the name Robertson, Foster & Smith. F. A. Foster has been with the firm 14 years in the office and Mr. Smith has been a traveler, so that the wholesale and retail hardware business will go on, no doubt, with more vigor than ever.

Record Foundry & Machine Co.

Not only in the Maritime Provinces, but in the whole of Canada is there a more live and active foundry than that of the Record Foundry & Machine Co. of Moncton. They have handsome premises covering an area of thirteen acres, and every department is busily engaged in the manufacture of their celebrated "Penn Esther" ranges, which are made in plain, semi-plain and ornamental; together with a large and comprehensive line of cooking stoves and furnaces.

The plant is far too large to describe in detail here, but some idea of the dimensions of the works may be given. The company dates its inception from 1853, when it was controlled by the firm of Record & Scales. Mr. Scales died in 1854, and Mr. Record carried on the business until 1882, when he sold the property and retired, and then the Record Foundry & Machine Co. was organized, the directors being, C. B. Record, A. E. Peters, Joshua Peters, H. T. Stevens, and G. F. Atkinson. Success has followed their efforts from the very start, and now their stoves, ranges and furnaces are sold from Atlantic to Pacific. They maintain extensive factories at both Montreal and Moncton; also agencies at Montreal, Quebec, Toronto, Winnipeg, Vancouver, Calgary, and St. Johns, Newfoundland.

In a trip through the works at Moncton it was a surprise to see the size of the plant. Their moulding shop is probably one of the largest in the Dominion; in fact, they have one hundred moulding floors in both Moncton and Montreal. When four hundred hands are required to carry on the business, it may be readily understood what an extensive place it is. Joshua Peters, the managing director, is a practical man, and watches every detail of the business; spending much of his time in Montreal as well as in Moncton. Nearly every man in the works is engaged on the piece work system; thus making each worker a specialist. No imperfect work is permitted in this way, and the worker suffers if the slightest want is in evidence. Then, too, it places each man in the independent position of earning a salary in keeping with his capability.

The company has a system of catalogue advertising, which is certainly a novelty, and is almost an endless chain of publicity. Twelve distinct catalogues being required to cover the varities made up in the works. The follow up system is practically unbeatable, and no buyer is allowed to escape. For instance, to meet an especial demand, they have waggons continuously running through the country, which carry a stock of catalogues and advertising matter to suit the territory. They have a publicity manager engaged continuously, in the person of Gordon Peters, who is kept occupied on the various systems, which quietly do their work.

The company is in excellent shape, and have paid first class dividends for years. The present directorate comprises, Thos. Fyshe, Montreal; Hon. H. R. Emmerson, Ottawa; Joshua Peters, Moncton; Senator Josiah Wood, Sackville, A. E. Peters, Moncton; C. W. Robinson, Moncton, and O. J. Peters, Moncton.

The New Brunswick Wire Fence Co., Moncton, N. B.

One of the strongest industries in Moncton and one that is rapidly spreading its influence over the whole Dominion is the New Brunswick Wire Fence Co. Established in 1899, it has gained ground every day and is to-day a leading industry of the Maritime Provinces. Owing to the increase of business they were compelled in 1903 to install a wire coiling plant, also machines for the manufacture of staples. They now manufacture everything complete in the fence line, including ornamented wooden or iron posts to match the wire. In many cases fences are erected by contract, for so much per rod or otherwise.

When a farmer or any customer wishes some fencing all he has to do is leave his order and the company do the rest. They even attend to the digging of the post holes, painting of the posts, etc., and at any price desired by the purchaser. There is a great deal of difference in wire fences as buyers find, when they come to look into the matter, especially as to staying power and their capacity for withstanding weather conditions. The salt air of the Maritime Provinces has a very strong corrosive effect upon wire fencing hence the greatest care has to be taken in manufacture. Mr. Chapman, the manager, explained that they had special galvanizing done for them, and prepared all their fencing to suit the climate for which it was to be used. In some cases they supply a high carbon wire which costs $5 a ton extra.

The fence they especially recommend to the public is one of uniform gauge of wire. No. 9 is used in the lock, horizontal and upright.

Ornamental fences are a marked specialty. In these, no wood is used at all. They are made from steel posts, steel wire and steel clamps. The posts are set in stone, and in this way a fence is made practically for a lifetime.

McLean, Holt & Co.

This company is nearly thirty years old and its chief business is railway supply work in castings of all descriptions. The owner of it, Mr. J. L. McAvity, belongs to that remarkable family of McAvitys, being a son of Mr. James McAvity, senior member of T. McAvity & Sons, who are interlaced with some of the largest enterprises of the Province of New Brunswick.

They have erected new premises on Albion street, between Hanover and Brunswick streets. They still maintain a plant at City Road and Stanley street and a handsome retail store at 155 Union street.

At the retail store they sell their principal line, the Glenwood ranges. Mr. McAvity is now pushing the Glenwood E range, which meets with ready sale everywhere in the province. The merits of this stove are described elsewhere in this issue.

St. John's Leading Hotel.

When down by the sea, in Canada, scarcely any traveler omits to call at the Royal Hotel, St. John. It is unique for many reasons. First, it is genuine home; second, it is a result of years of good management and development. The hotel is well located on King street and is constructed so as to face on two streets making an ideal hotel site. It is furnished from basement to attic with the best and newest hotel comforts and accessories. The hotel is owned and managed by two partners, W. E. Raymond, nephew of the man who founded it nearly half a century ago, and H. A. Doherty, who has been with the house for 37 years. He has risen from the position of bell boy to that of one of the proprietors.

Messrs. Doherty and Raymond make a great team. Mr. Doherty is attentive to all the tiring details of this big house, and always pleasant and obliging. Mr. Doherty is liked, as his partner is, by all who know him. Both take an active interest in the welfare of St. John. In the office of the hotel is Mr. T. B. Reynolds, the chief clerk. He is know almost as well as the proprietors for his unfailing good temper, capability and politeness. He is called the "Beau Brummell" of Canadian hotel clerks.

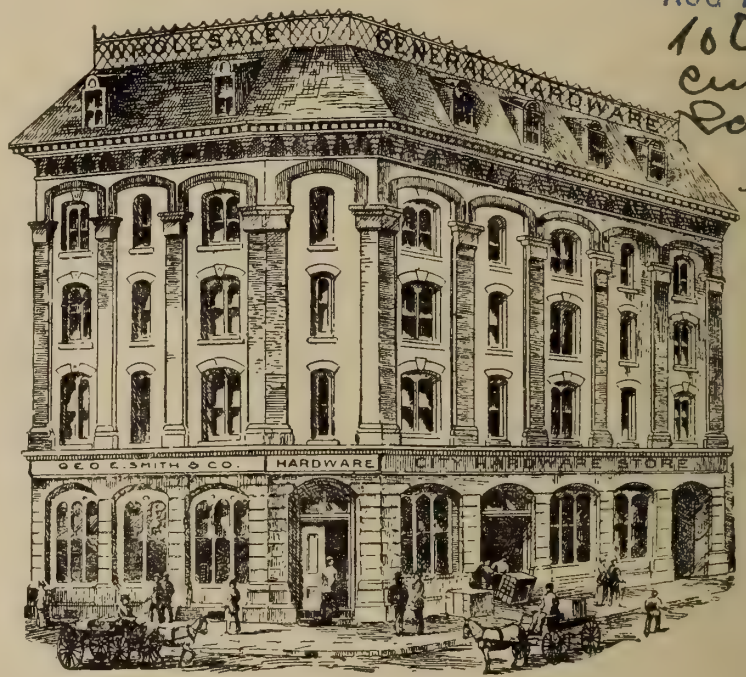
GATEWAY TO THE ATLANTIC

Halifax the Busy and Beautiful—Early Beginnings and Commercial Development—Outlet of Canada's West Indian Trade—Some of its Progressive Business Houses.

Every person of school age and over in Canada knows Halifax as the chief military and naval station on the North Atlantic, as the most easterly city of the Dominion and as the location of one of the finest harbors in the world. Unfortunately comparatively few of them reared west of the Maritime Provinces ever see it. Halifax is one of the most thriving and one of the most beautifully situated cities in the Dominion. No one can better speak of it than John Forrest, president of Dalhousie College, and in an article for the American Science Monthly's encyclopedia he says:

"Halifax, the capital of the Province of Nova Scotia and county seat of Halifax County, a city and port of entry on Halifax Harbor on the Intercolonial and Dominion and Canadian Pacific Railways. The harbor, originally known as Chebucto, 'chief of havens,' is one of the best in the world. It is 16 miles long from north to south, with an average width of a mile, and terminates in Bedford Basin, a beautiful sheet of water four miles wide, affording 10 square miles of safe anchorage. The Northwest Arm, an inlet on the west of the city, is a charming bay, on the shores of which are many of the villa residences of the wealthier Haligonians. The harbor is protected by eleven forts and batteries. A citadel crowns the hill on the slopes and at the base of which the town is built. The streets are regularly laid out on a rectangular plan, are lighted by gas and electricity and have electric street car line. The public buildings are built chiefly of freestone, the houses of wood.

Means of Communication.



"Halifax is the chief British naval station in North America and has extensive dockyards. * * Halifax has railroad communications with all parts of the Dominion and the United States and steamship lines connecting with Great Britain, the West Indies, Boston and New York. The chief occupations of the inhabitants are commerce and fisheries. The city has considerable West Indian trade, exporting lumber, fish, and agricultural products, and importing sugar, rum, molasses and other subtropical products. Most of the commerce of the province is carried on through Halifax. The principal manufactures are iron castings, machinery, agricultural implements, nails, paints, gunpowder, cordage, leather, boots and shoes, clothing, soap and candles, cotton and woolen goods, and woodenware. There are also sugar refineries, distilleries and breweries.

"Halifax was founded in 1749 by Hon. Edward Cornwallis, and named in honor of the Earl of Halifax. The following year it was made the capital of Nova Scotia, then including New Brunswick, in place of Annapolis. In 1817 it was declared a free port. In 1842 it was incorporated a city."

World-Wide Trade.

The business of the city is large and increasing, and there are several firms who trade extensively all over the Dominion, such as the Dominion Molasses Co., Wm. Stairs, Son & Morrow, the Starr Manufacturing Co., of Dartmouth, and others.

The shipping trade of Halifax is growing rapidly. The exports as well as the imports show steady increases and this serves as a barometer to all students of trade development. During the month of August the city streets were nearly all torn up and new pavements are rapidly replacing old uneven roads. There are signs of improvement on every hand. Fine new business buildings are in course of construction and Halifax is enjoying its share of the general prosperity of the Dominion. Steamship lines of the first importance trade with Halifax.

Geo. E. Smith & Co.'s Store at Halifax.

Manufacturers are always given openhanded treatment by the Halifax City Council and the attractions for industrial enterprises are numerous.

The comfort available in the Halifax Hotel is of the home type. Bright, clean, luxuriously furnished and elaborately appointed, the house stands easily as the aristocratic and leading hotel of the east. About a year ago the present company took charge under the management of E. L. Macdonald. New life has characterized every department and hundreds of guests have visited the hotel this Summer and are now personal advertisements for it. The house looks out on the harbor of Halifax and a fine conservatory lends additional attractiveness to the handsomely furnished drawing-rooms. The bedrooms are well lighted and airy. Every accessory to modern hotel life has been employed as well as an excellent cuisine. The dining room is most attractive and a first-class orchestra lends additional charm.

Geo. E. Smith & Co.

No brighter young business man will meet you in Halifax than Mr. Geo. E. Smith, head of the firm Geo. G. Smith & Co. The firm was founded in 1875 and was then under the name Irish and Smith. Mr. Irish retired after a very short time and the business has been carried on since under its present name. The partners now are Messrs. George G. and A. W. Smith.

The building is admirably located, fronting on Cheapside and Bedford Row; being one of the most valuable sites in Halifax, bounded on the north by the Post Office, on the east by the Customs House, and west by Provincial Buildings. They are agents for Noble & Hoare's Varnish, London, Eng.; Neverslip Horse Shoe, New Brunswick, N.J.; they make a specialty of Burrill's English white lead and ready mixed paints and Masury's and Valentine's C. P. coach colors.

A.W.

Their newest agency is for the Buchanan, Foster & Co.'s "Congo" roofing, a Philadelphia firm.

Mr. Smith says that this is the cheapest and best permanent roofing on the market, that it is absolutely water proof and time defying, requiring no coating for many years, as it is coated on both sides, preventing rot underneath. It can be used on steep or flat roofs, or applied over old roofs. It is elastic and pliable, and can be easily and quickly laid. There is no tar used in its manufacture.

With each roll of "Congo" Roofing Felt a package of cement for seaming is supplied free of charge, also nails and tins for fastening purposes. The roofing is manufactured in four thicknesses, ½ ply, 1 ply, 2 ply and 3 ply, and is put up in rolls 36 inches wide. There are 108 sq. ft. to a roll, which minimizes the loss in the overlap, a point which will commend itself at once to all builders.

Geo. E. Smith & Co. will carry stocks of this roofing in their warehouse at Halifax, and will supply the retail trade either direct or through Halifax jobbing houses.

Samples and quotations will be supplied to inquiries as quickly as received.

Wm. Stairs, Son & Morrow.

As well might one leave out the name of Halifax, in a reference of this kind, as to omit Wm. Stairs, Son & Morrow. The names Stairs & Morrow have been identified with the growth of the city for over a century.

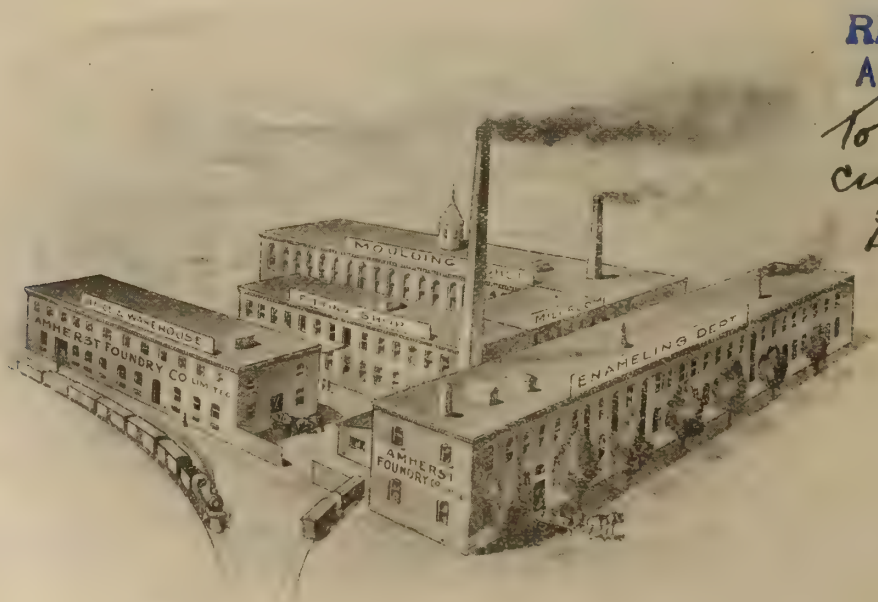
When Kitson, the Glasgow iron merchant, had a small country store off Chebucto Bay, 100 years ago, Wm. Stairs, Esq., bought it from him. About 1854, Mr. Morrow joined the firm, and from crudest general store lines, the house has developed one of the most sterling and extensive shelf and heavy hardware businesses in the Dominion. They claim to be the oldest and largest hardware store in the Maritime Provinces.

Their premises are not as formidable looking from the outside as they are convincing inside. A magnificent stock is carried; everything is in order and the solid character of one of the fine old country house is everywhere in evidence. There is a distinct avoidance of extravagance in statement, but the place speaks for itself. They represent the Imperial Duck Co., Hamilton; Muntz Metal Co., Birmingham; Gundry & Co., fish nets and lines, Breakport, Eng.

Wm. Stairs, Son & Morrow's Warehouse, Halifax.

Amherst Foundry Co., Amherst, N. S.

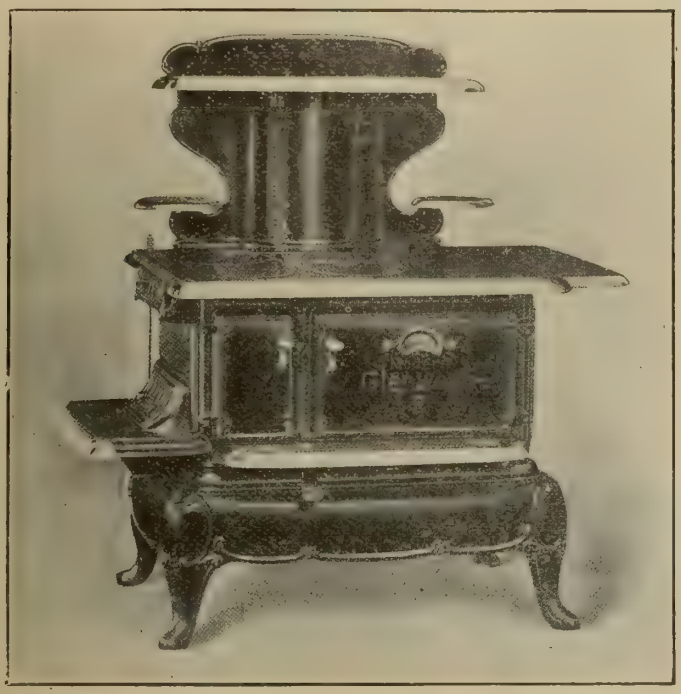
When the Maritime Board of Trade was in session in Amherst there was no place more cordially ready to receive the visitors than was this up-to-date foundry. Mr. Knight, the president and general manager, was with the delegates on different occasions and took an active interest in the convention. The foundry has been in existence since 1904, when they put into operation the second plant in the Dominion for the manufacture of porcelain cast iron enamelled baths, lavatories, sinks and kindred goods, for the plumbing trade. Success has followed their efforts in all directions and to-day they are selling enormous supplies to consumers in all parts of the Dominion. The Great West is taking immense quantities of their goods and the town of Amherst, which last year had a total industrial output of three million and a half dollars, was helped extensively by this foundry.



In 1890 J. A. Crossman and J. A. Lanes started in a small way to manufacture stoves, hot air furnaces and sinks. At the same time William Knight and J. Avard Black were carrying on a retail stove business in stoves, furnaces and tinware. On January 1, 1895, the four gentlemen, together with C. A. Lusby, entered into partnership under the firm name of the Amherst Foundry and Heating Co., for the purpose of continuing the business of Crossman and Lanes and Knight and Black. Their energy and ability soon won its way into a very large enterprise and their goods became widely known and sold all over the provinces. New premises were soon required and the present handsome building was erected of solid brick and stone. The plant is second to none and all the accessory buildings and offices are up-to-date in every particular. The works are admirably accommodated by an I.C.R. railway siding and excellent facilities are afforded for shipping.

About four years ago the members of the firm together with Mr. Black, formed a new company known as the Amherst Foundry Co., with the heating caption left off. They manufacture an extensive line of stoves, ranges, hot air furnaces and porcelain enamelled baths, sinks, etc. All of these goods are noted for their durability, beauty and sanitary attraction. The famous "Improved Cumberland" is a unique creation and can be used for wood and coal either separated or together.

The "Beaver" brand enamelled goods have no superior, as is proven by the long list of satisfied customers from one end of the country to the other. One specialty of the enamelled department is "The Eastern Beauty," a magnificent lavatory which would be hard to beat in the equipment of a high class building.



The company is located in one of the smartest business towns in Canada, and there is a still brighter future for these men who have by their brains, energy and determination evolved a small venture into an important factor in the commerce of the Dominion.

Halifax, N.S.

Cragg Bros. Co.

One of the brightest and most up-to-date stores in Halifax is the well-fitted up place of business of Cragg Bros. Co., located on a prominent corner of two of the busiest streets. They have been established nearly twenty years and are known as the cutlery house of the city. They carry fine assortments of cutlery, athletic goods, tools, kitchen furnishings, etc. Activity and style stamps the store. During August when Dartmouth, the neighboring suburb, celebrated its natal day, Cragg Bros.' store was made conspicuous by bunting.

Mr. Cragg is one of Halifax's most enterprising and public-spirited citizens.

HARDWARE STORES AT HAILEYBURY.

Tuesday's big fire at Haileybury, Ont., wiped out two hardware stores, while the third one is now the only important place of business left standing. The fine new store of J. H. Bell & Co., whose headquarters are at Mattawa, Ont., was completely destroyed, and the loss is estimated at $6,000, with insurance unknown. Norfolk & Co. also lost their store, valued at $7,000, and insured for $5,000. On the arrival of help from New Liskeard, however, the fire was finally stopped, and the hardware store of Montgomery & Ferguson was saved. Charlton & Wilson's hardware store was also destroyed.

Cragg Bros'. Store, Halifax, N.S.

APPRECIATED WORK.

The following letter from E. K. Spinney, of Yarmouth, N. S., attests the standing in which Hardware and Metal is held in the Maritime Provinces, and the active interest they have taken in the commerce of that part of the Dominion.

C. D. Cliffe, Esq., Hardware and Metal.

Dear Sir,—I have your esteemed favor of the 9th inst. and am pleased to know that you are in the province and will attend the annual meeting of the board of trade to be held at Amherst next week.

I regret exceedingly that some business engagements will prevent my being present this year. I am exceedingly sorry for this as I would like to show my appreciation to the members of the Maritime Board of Trade for their interest in so fully attending the meeting at Yarmouth last year. But only for the above reason I would certainly have been present. I trust you will have an interesting meeting.

I have no objection in renewing my last year's contract with you for advertising in Hardware and Metal, as I think your management should be supported enthusiastically for the great benefits bestowed upon the Maritime Provinces by the energetic reporting of both these meetings and that of the hardware association. I have not got a copy of that issue and do not know how far the advertisement will bear repeating. But imagine a duplicate of that will be quite satisfactory.

Yours truly, E. K. SPINNEY.

THE MODEL HARDWARE STORE.

One of the most interesting exhibits at the Toronto Exhibition as far as the hardware trade are concerned will be that of Cameron & Campbell, sole manufacturers of the Bennett steel shelf box, which has been installed by thousands of hardware merchants in Canada, United States and Great Britain.

They will have two sections of shelving fitted with an assortment of steel shelf boxes suitable for a hardware business. One section will be 14 feet long and 8 feet high and 12 inches from front to back. All the exposed wood on this section will be oak and the fronts of boxes will be oak. All the boxes in this section will have a "lip" which fits tightly against the shelf and thus keeps out all dust.

The other section will be 11 feet long and 8 feet high. This will also be made of oak, but in a lighter finish. This section will also be fitted with the Bennett steel shelf boxes. The boxes will not have the "lip" and will be lower in price.

They will have three screw cabinets, different sizes. These cabinets are fitted with Bennett steel drawers. Each drawer has a "lip" and as there is also a steel back to the case it is absolutely dust proof.

The price will be placed on each article so that a hardware merchant can tell exactly just what it would cost to fit up his store and can also see just what he is getting for his money.

Every hardware merchant whatever the condition of his store can get some new ideas on the interior arrangement of his store by visiting this exhibit.

SLASH IN AXE HANDLES.

F. Y. W. Brathwaite, Blind River, a member of the Ontario Retail Hardware and Stove Dealers' Association, sends the following letter to Hardware and Metal for publication:

"I have read the different association members' complaints against jobbers as published in Hardware and Metal, and am very pleased that this subject is receiving attention by the association, as I consider it the most annoying feature of the retail trade and the one that requires the most vigorous attention of the association, and members individually. I give below an experience I have just had, which shows to what extremes some manufacturers and jobbers will go to in order to get business. I send this letter for publication, as I think the retail trade as well as the association should know what is going on. Should any dealer write me for the name of the firm who resorts to the means mentioned below to get business, I will be only too pleased to give the name as well as the name of the parties to whom they sold.

"The wholesale price on axe handles is, as we all know, 45 per cent. off list. Others have complained that the jobber has gone to the consumer and quoted wholesale prices, but the experience I have just had is of a manufacturer's traveler calling on me and quoting me 45 per cent. off list, and when I would not buy from him, as I had my connection made with another firm, going direct to the consumer and quoting him, not 45 per cent. off list, but 45 per cent. and 15 per cent. off list. He even went further, and said if he could sell a carload in the town he would sell at this price f.o.b. this town. I think the above beats anything you have published before.

"I think the idea as published in the association page, August 18, a good one, viz.: To have the different members having complaints notify the association, who in turn notify the jobber or manufacturer. If this does not have the desired effect, the association to notify all members, who can then act individually as they see fit."

J. A. Coulter, president and manager of the John Morrow Machine Screw Co., Ingersoll, and the Ingersoll Nut Co. has been elected mayor of Ingersoll by acclamation.

THEY NEVER LET GO

We Refer to our . . **"BULL DOG" COATED WIRE NAILS**

THEY ARE THE BEST COATED WIRE NAILS IN AMERICA

WHY ? Because they are coated on a finely roughened surface and resist just enough to make it possible for us to claim that "They NEVER let go." That's simple. Isn't it ? Why not let us tell you about them ?

Then there is another point, these claims are made after tests made at McGill University and further confirmed by our own machine purchased from Rheile Bros. of Philadelphia. Still further we are backed by a long line of satisfied customers all over the Dominion. Let us convince you. A post card will bring all the facts plainly told.

Then the matter of Galvanizing. We have recently installed a new galvanizing plant and are prepared to furnish **the best Galvanized Wire Nails and Spikes made in Canada.**

HARDWARE TRADE GOSSIP

Ontario.

Norris & Lockhart, plumbers, Galt, have assigned.

J. J. Sheridan, plumber, of Woodstock, was in Toronto Wednesday last.

Norris & Lockhart, plumbers, Ailsa Craig, have assigned to Wm. Foster.

H. Miller, of Miller, Morse Co., Winnipeg, was in Ontario on a business trip.

The Huntsville Foundry & Machine Co's property has been sold by auction.

James Sherlock, plumber, Toronto, is spending a few days in Port Colborne.

Allan Gibson, plumber, Toronto, is spending a vacation with Mrs. Gibson in Muskoka.

W. W. Near, manager of the Page-Hersey Co., Guelph, was in Toronto during the week.

Robt. Sirman, of the Toronto branch of the Canada Paint Co., is away on a trip to Chicago.

W. J. Cluff, of Cluff Bros., Toronto, is on a business trip in Montreal and Eastern Ontario

Geo. Lasher, hardware merchant, Toronto, is holidaying in the country for a couple of weeks.

N. L. Stewart, manager of the Guelph Stove Co., was in Toronto Thursday on his way to Montreal.

K. R. Cameron has recently purchased the hardware business of J. Moses, 516 Dundas street, Toronto.

James Allen, Sr., of Newmarket, is dead. He was for many years in the foundry business in that town.

Mr. Higgins, of Higgins & Large, plumbers, Brampton, was in Toronto on a buying trip during the week.

C. P. Godden, hardware merchant, King street east, Toronto, has returned from a trip to Quebec and Montreal.

George Dunn, of the Canadian Steel & Wire Company, Hamilton, was married on Monday last to Miss Jean Simpson.

R. T. Walker has opened up a nice hardware store at 847 College street, Toronto. Max Morell, for Lewis Bros., Montreal, filled his opening order.

The Model Hardware Co., Yonge street, Toronto, have opened a branch at 163 Dundas street. Mr. Jackes, formerly of the Yonge street store, has been installed as manager.

G. Haughton, hardware merchant, Dundas street, Toronto, is back to his duties after being confined to his bed for three months with inflammatory rheumatism. In conversation with a Hardware and Metal representative, Mr. Haughton said he found the greatest pleasure in reading Hardware and Metal during his illness, and would rather have missed his meals than missed reading it.

The Orillia Hardware Co., successors to G. H. White, have put up a brick building for a work room in rear of their store premises, and are ready to enter into contracts for plumbing, steam heating, and furnace work, tinsmithing and metal work. The manufacturing branch of the business will be under the direction of Edward Latimer, a member of the company, who has just disposed of a business in the same line in Seaforth.

Quebec.

A. G. Eastman, of Sutton, Que., paid a hurried business visit to Montreal this week.

H. Alguire, of Maxville, Ont., was among the out-of-town buyers to visit Montreal this week.

W. S. Leslie, of A. C. Leslie & Co., Montreal, has returned from an extended business trip in the west.

L. A. Nobert, hardware merchant, of Louiseville, was in Montreal this week, where he was purchasing stock.

N. J. Wyatt, of the N. J. Wyatt Can Works, Sutton, Que., was a business visitor in Montreal a few days ago.

Mr. Archibald, of the Nicholson File Works, Port Hope, visited Montreal Wednesday, on business for his firm.

Mr. Stewart, representing the Hamilton Cotton Co., of Hamilton, Ont., called on the Montreal trade this week.

Edward Dowsley, secretary-treasurer of A. Ramsay & Son Co., Montreal, is spending his vacation on the sea coast.

Mr. Higgins, of the American Radiator Co.'s Brantford plant, was calling on the Montreal trade during the week.

N. Tobias, general merchant, of Ville Marie, Lake Temiskaming, was in Montreal this week on a buying expedition.

C. Church, of C. Church & Sons, lumber merchants, Labelle, visited some of the Montreal hardwaremen during the week.

Mr. Williams, chief clerk of Carter Bros., hardware dealers and plumbers, Picton, Ont., paid a visit to Montreal recently.

J. W. Dowling, of Caverhill, Learmont & Co., Montreal, is enjoying a two weeks' rest in the Laurentian Mountains.

Geo. M. Edwards, managing director of Henderson & Potts Co., Montreal, has returned from a several days' stay in St. John.

Chas Fee, advertising manager of Lewis Bros., Montreal, returned from a ten days' vacation spent at Lac Des Isles in the Laurentians.

P. J. Power, of P. J. Power & Co., boilermakers, Ottawa, called at some of the supply houses of Montreal on Tuesday of this week.

Elmer R. Carroll, manager of the Hamilton Brass Mfg. Co., Montreal, was married a few days ago to Miss Gertrude Presnail, of Hamilton.

J. Ernest Millen, of John Millen & Son, distributors of hardware specialties, Montreal, has left for a combined business and pleasure trip in Europe.

J. T. Henderson, hardware merchant, Niagara Falls, called on his Montreal business connections this week. Mr. Henderson was accompanied by his wife.

Miss M. H. Gibson, manager of the advertising and publishing department Canadian Fairbanks Co., Montreal, is enjoying her vacation at Niagara Falls and other Ontario points.

R. A. Mulholland, hardware merchant, Port Hope, who has been spending his vacation touring the Maritime Provinces, stopped off at Montreal last Friday, on his return trip, and seized the opportunity to visit some of the metropolitan wholesale houses.

The Dominion Radiator Co.'s Montreal office reports that contracts have recently been closed by them for the installation of "Safford" radiators in St. Patrick's Orphan Asylum, Pine Avenue Apartments, and the American Tobacco Co.'s new factory.

Western Canada.

Hale Bros., plumbers, Calgary, have assigned.

W. Hanford & Co., plumbers, Winnipeg, were burned out.

Louis Kemp, plumber, Vancouver, has sold out to Moscrop Bros.

J. A. Gray, hardwareman, of Vancouver, has sold out to O. M. Fox.

The hardware store of John A. Thomson, Elm Creek, Man., was broken into by burglars one night last week. Fortunately Mr. Thomson had left only a few cents in the till, and the actual loss in cash was small. A couple of revolvers and some cutlery were carried off.

STRIKE AT ROLLING MILLS.

A somewhat peculiar cause was at the back of a strike involving about 1,200 employes of the Montreal Rolling Mills, and which, at time of writing, seems approaching a complete settlement.

Some time ago, this company, which is one of the most modern in the country, in methods of accounting and manufacture, decided to still further facilitate the work of the office department by adopting a new system of paying the men. Hitherto, employes had received thier money every other week, but, as that involved a great deal of work on the part of the office staff, it was arranged that payments in future should be made twice in the calendar month instead.

On Thursday of last week, notices concerning the change in system, were posted in the pipe department, and the same day one hundred and fifty men went out on strike. They were followed by the employees of the rolling mill, tack works, wire mill, horseshoe works, as well as the yard hands, firemen and their helpers, so that the works were practically crippled.

The men stood firm in their determination not to go back to work until the old system of payments every alternate Saturday should be restored, in spite of efforts put forth by the management to convince them that they were not losing anything by the change, but were simply receiving the same amount of money in

twenty-four installments, as formerly in twenty-six per year.

Towards the middle of the present week, some of the men began to waver, and started a crusade among all the strikers, with a view to going back to work. On Thursday the management reported that about seven hundred men had returned to their places, and it is expected that by the beginning of next week the whole twelve hundred will be in line, and mills again running at the height of their capacity.

CHANGE OF AGENCY.

Alexander Gibb, 13 St. John street, Montreal, who has represented the Standard Chain Co., of Pittsburg, Pa., in the provinces of Ontario and Quebec, since the formation of that company, has now been given the balance of the Canadian territory and is sole Canadian agent for the Standard Chain Co. from the Atlantic to the Pacific ocean. .

Mr. Gibb has arranged with Bissett & Loucks, Winnipeg, to act as his agents in Winnipeg and the Northwest, and with John Burns, of Vancouver, for British Columbia. Both Mr. Bissett and Mr. Burns were associated with Mr. Gibb in the past, before the formation of the Standard Chain Co., when he was representing the Nes Chain Co., which concern was taken over by the Standard Chain Co.

WHO MAKES MICA?

In a recent issue of Hardware and Metal a subscriber asked "Can you give me the address of the concern making mica at Buckingham, Que." In replying to this a letter has come to us as follows: "Referring to subscriber's inquiry about mica at Buckingham, we beg to refer you to L. Sohier, 730 Berri street, Montreal, who is proprietor of mica mines at St. Michael des Saints. Although these mines are not at Buckingham we believe this will be helpful to subscriber."

Adscript, Canada

MARITIME BOARD OF TRADE.

The Maritime Board of Trade is a union of the business men of the three Canadian provinces washed by the Atlantic. When the financial, industrial and mercantile interests of Eastern Canada are thus united by common purposes and aims, what good reason is there for longer continuing three political divisions? The name "Maritime Provinces" is itself indegative of common interests.

The representative business men of the Atlantic division of the Dominion have declared unanimously for a provincial amalgamation of the three into one. How long will the politicians tarry behind? Just as long as they dare. There will be plenty of opposition. The office holder and the office seeker will regard union as an outrage, a disgrace, a forfeiting of all provincial traditions and sentiment. The tiny politician, who can cut some figure in a small field but would be totally lost in a larger one, will cry down union with a magaphone. And the mass of the people will be added weight.

The union of the three provinces will be attained only after a good deal of agitation and education of public opinion. An effective way of going about it would be to form an association to keep up the agitation, show the people of the three provinces that socially, industrially and politically, their interests are identical, that there would be a great economy in substituting one government for three, and that in federal matters one large province would be a much more potent factor than three small ones. There is but one way, and it is plain, in the one word AGITATE.

This twelfth annual parliament of Maritime businessmen was an unqualified success. The attendance was large and representative; the interest might rightly be termed enthusiasm and a spirit of kindred aim and neighborliness was apparent that could not but extend the horizon and broaden the sympathies of every delegate. It was a gathering well worth while. Already the west has copied the idea with splendid results, and some day the boards of trade of Central Canada will hold their annual conventions. The next step will be a congress of the boards of trade throughout Canada to form and give expression to the business opinion of the Dominion.

MARITIME MERCHANTS SHOULD ORGANIZE.

Hardware retailers in the Maritime Provinces should get in line with the organization movement which has taken hold of the dealers in nearly every state and province in North America. Following several years of success in the United States the retail hardware and stove dealers of Western Canada got together two years ago and the trade in Ontario fell into line this Spring.

A Maritime Retail Hardware and Stove Dealers' Association would help to round off the proposed Dominion Retail Hardware Association and make it truly national in scope. The hardware jobbers of the Maritime Provinces are already organized and would no doubt welcome a retailers' organization which could deal with them in such matters as are of mutual interest as well as establish a sound debt collection plan similar to the one already adopted by the Western Canada association and being considered by the trade in Ontario.

It is not to the interest of jobbers to see retailers weakening themselves by cutting prices, and any effort made by the retail trade to regulate matters and secure a fair margin of profit would undoubtedly meet with the support of the wholesalers. And if the sale of goods to consumers is as great an evil in the east as it is in Ontario it is certain that every fair-minded jobber would welcome the organization of a retail association which would act as a check upon any jobbers who encouraged this back-handed competition with their retail customers.

Let the broadminded and progressive spirit which pervaded the convention of the Maritime Board of Trade be evidenced by the inauguration of a movement to form a Maritime Retail Hardware Association. Dealers who are willing to join such an organization might get in touch with each other by sending their names and addresses to the secretary of the Ontario Retail Hardware and Stove Dealers' Association, 10 Front street east, Toronto.

COMING HARDWARE CONVENTION

The special convention of the Ontario Retail Hardware and Stove Dealers' Association to be held in the Labor Temple, Church street (a few doors north of Queen street) Toronto, on Tuesday and Wednesday, September 4 and 5, will probably be the most important gathering in the history of the trade in Ontario.

The program outlined by the executive is on a purely business basis, the bulk of the business being transacted by committees and during the Tuesday afternoon session. Time will be allowed in this session for a full discussion of trade grievances and every retail hardware dealer will have an opportunity of expressing his views. Following the discussion a special committee will be appointed to confer with a committee of the jobbers and manufacturers and on Wednesday morning the report of the special committee will be received and the convention will probably adjourn before noon, allowing the delegates to spend the afternoon at the exhibition or visiting the sample rooms of the various wholesale houses.

No entertainments have been arranged for, as it is recognized that a short, snappy, business convention will be more in keeping with exhibition time and the requirements of the retail hardware and stove trades at the present time.

All delegates and readers of this paper are invited to make our offices at 10 Front street east (midway between the Union Station and Labor Temple) their headquarters while in the city. Mail or telephone messages can be sent in our care, while our writing tables are available at all times.

Attend the convention, visit the exhibition and make a friendly call on Hardware and Metal.

READY FOR EXHIBITION.

Gurney, Tilden Co., of Hamilton, manufacturers of "Souvenir" stoves and ranges, have been busy all week getting their exhibit ready at Toronto Exhibition. Mr. J. E. Bennett and Mr. Court Thomson called at the office of Hardware and Metal and were very enthusiastic regarding the exhibit. They said their firm were sparing no expense to have an exhibit that would be attractive and instructive to the trade. All the Ontario travelers will be on hand to welcome the trade, explain the selling points in the "Souvenir" line of ranges and the "New Idea" line of warm air furnaces.

Some men are too slow to get out of their own way.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers' Association of Western Canada:

President—A. J. Falconer, Deloraine.
First Vice-President—J. B Curran, Brandon.
Second Vice-President—W. M. Gordon, Winnipeg.
Secretary-Treasurer—J. E. McRobie, Winnipeg.
Executive—Alberta, A. E Clements, Olds; C. F. Comer, Calgary; A. R. Auger, Okotoks.
Manitoba—H. S. Price, Boissevain; A. P. Macdonald, Winnipeg; O. Gilmer, Winnipeg.
Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.
Officers Western Board (elected by general merchants and hardwaremen in joint session): President, W. G. McLaren, Souris, Man; vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; secretary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor, J. A. Lindsay, Winnipeg. Man.
Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association:

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G. Scott, Mount Forest.
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto.
Secretary—Weston Wrigley, 10 Front St. East, Toronto.
Executive Committee—The officers and J. W. Peart, St. Mary's; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.
Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

COMING EVENTS.

Convention of Ontario Retail Hardware and Stove Dealers' Association, in Toronto, on Sept. 4 and 5.

WESTERN DEBT COLLECTION PLAN.

Not the least important branch of the work done by the Retail Hardware and Stove Dealers' Association of Western Canada has been the introduction of a really effective scheme for the collection of outstanding accounts. Probably every hardware man, every member of the Western Retail Hardware Association, has a number of debts on his books which he finds it very hard to collect; but not every dealer is acquainted with the association debt collection plan and for that reason Hardware and Metal has no apology to offer for the space devoted to it this week. The Western Retail Associations have a plan which has proved very successful in separating the Western farmer from the coin that belongs to the dealer for a long standing store bill and the merchant who doesn't know about it is not keeping up with the times.

In the first place it must be remembered that the main reason why a customer is often so dilatory and indifferent about settling his store bills is his knowledge that he can easily get goods on credit at another store. For this reason it is well to let him know that there is in existence an association of hardware dealers whose object is mutual self-protection from just this sort of thing.

Forms Supplied to Dealers.

When a dealer finds it impossible to collect a debt in the ordinary way he has the privilege of enlisting the services of the Hardware Association. On request, any member in good standing will be furnished by Secretary McRobie with a letter bearing the imprint of the association and to the following effect :—

———— 190—

Mr. ————

————

Dear Sir :

Our account amounting to $ ——— has not been settled yet according to your promise. Unless we hear from you and you adjust it in a satisfactory manner before ———— we will be compelled to hand it over to the "Credit Reporting and Collecting Department" of The Retail Hardware and Stove Dealers' Association of Western Canada and the Retail Merchants' Association of Western Canada, of which former association we are members. The two associations include in their membership nearly all the retail merchants of all classes in the Western provinces and they are formed for self protection.

We would regret being obliged to do this, as the account thereby goes into the hands of a very strong and influential organization, and every member is informed thereof. We dislike to believe that you purchased the goods with the intention of not settling for them, so we expect you will not fail to call in and see us before the above date.

Yours respectfully,

————

A Delinquent List.

In most cases this letter has at least the effect of securing a call from the delinquent debtor and a consequent arrangement to settle by cash or note. But if no reply is received the merchant then fills in a stub to which the letter was attached and sends this stub to the secretary, with full particulars of the accounts. The secretary will then write the delinquent a letter informing him that if the account is not settled within a specified length of time the association members will be informed of the circumstances. A hint at a "delinquent list" is usually all that is required to ensure settlement, but if it is not successful the threat is carried out. In many sections of the West various branches of the trade are compiling "delinquent lists" for their own protection.

New Plans Being Laid.

Plans for the curtailment and regulation of credit are receiving the close attention of the association and something new is promised in the near future. It is recognized that credit can not be altogether abolished and that the only thing feasible is to regulate it carefully.

Last year a determined effort was made in several sections to shut off all credit from November to April and the plan was attended with some measure of success. In some sections it will be tried again this year.

Coupon Book System.

But if credit must be given it should be regulated and the man who gets credit should pay for it. The association are now at work on a coupon book system, the plan being that customers desiring credit can secure coupons, good for a certain value in merchandise, on signature of a note for the amount with interest at five or six per cent. In this way the man who gets credit pays for it and the cash customer does not suffer. It is not practicable to have a credit price and a cash price for goods; the plan has been tried many times and it has always proved a failure. But this plan attains the same end in a different way and it is worth trying. It is worth trying for the reason that the cash customer is worth retaining and cash customers are being driven to the mail order stores by the fact that they have to pay credit price in so many stores. Further particulars of this coupon plan will be announced later.

MUTUAL INSURANCE IN ONTARIO.

The Mutual Insurance Committee of the Ontario Association are at work preparing a report to the association on the subject of forming a mutual insurance company amongst the hardware dealers of the province. At present the laws appear to be drafted in the interests of the old line companies, but this is not deterring the committee in its work.

The committee would be glad to be advised by hardware dealers in various parts of the province on the following points :

What is your present line rate on (a) buildings and (b) stock.

The receipt of this information will enable the committee to compute the possible revenue from premiums and taking the proportion of fire losses and expenses from the American mutual hardware companies an idea could be obtained of how many policies would require to be issued in order to make it worth while establishing a mutual insurance company in connection with the Ontario association.

FREIGHT RATES AND CLASSIFICATIONS.

"We are glad to see you have taken up the matter of cartage charges and would suggest that the next subject dealt with should be the freight classification and the rates the railroads are charging. We wish the association every success."

So writes Coy Bros. & Southcott, St. Catharines. What dealer can send in a short letter for publication outlining a plan of action in the matter suggested and explaining the injustice of the present classification and rates? A few letters on this subject would help the association officers.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 88.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Range Boilers—Higher prices on copper boilers.
Coil Chain—A general advance.
Hoop Iron—Base price $2.70.
Cut Nails—Some firms have advanced.
Pig Lead—5c. per hundred pounds higher.
Old Material—Some advances made.
Turpentine—Advanced two cents.

TORONTO.

Pig Iron—Middlesborough has advanced $1.
Ingot Tin—Quotations are one cent higher.
Turpentine—Quotations are two cents higher.
Linseed Oil—Quotations are three cents higher.
Poultry Netting—Quotations are 50, 10 and 5 off 2-inch mesh. Other sizes remain as before.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 24, 1906.

With nearly all the Montreal jobbers business this week has been uncomonly large for the season. In some cases, indeed, the floor space in the packing rooms has been found to be quite inadequate, and orders which could be held back a day have been subjected to that delay in order to get out the rush orders on time.

American prices on builders' hardware are stiffening, and advances may shortly be declared by Canadian jobbers. All through the hardware market quotations are showing an upward trend, and in a couple of instances higher figures are given. In coil chain, the 1 inch size is now quoted at $5 per hundred pounds, and other sizes are correspondingly higher. Hoop iron has also been advanced, the base price at present being $2.70. Cut nails are much firmer, and jobbers are now keeping pretty well to a price of $2.20 per keg base.

Some wholesale houses are reporting good sales of sleigh bells, and in this line a much better quality is being demanded this year than ever before. Very few at less than $2 are being sold. In horseblankets, too, a good trade is being called for, although trade is not yet very active. Most sales are for blankets varying from $12 to $20 in price.

AXES—Business continues at about the usual volume. We quote as follows: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—A good turnover is reported, and quotations remain: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—Although lanterns have been sold in such quantities during the past couple of seasons, business continues good. A good deal of price cutting is still being indulged in, but conditions are steadying. We quote: "Prism," $7; "Prism" globes, $1.20; Cold Blast, $4; No. 0 Safety, $3.50 to $3.75.

COW TIES—Inquiries are excellent and good orders are being shipped. Discount quoted on cow ties is 40 per cent. off list.

STALL FIXTURES—Business in this line is also very brisk. We give discount as 35 per cent. off list.

SLEIGH BELLS—Accounts of trade conditions are conflicting. On the whole, however, it would seem that business is unexpectedly good, coming after a very unseasonable Winter. We quote as follows: Back straps, 50c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape, $1.15 to $2; shaft gongs, 20c to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

RIVETS AND BURRS—An excellent demand. We still quote: Best iron rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—No change in the situation is noticed. We are still quoting as follows: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b. Montreal.

MACHINE SCREWS—The demand is about as usual. Discounts remain as follows: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—Bolts are still very scarce, and the market is firm. We give discounts as follows: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS—Fall business is beginning to come in. We quote as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—Price cutting is general, but we are still quoting: $2.05 per keg base, f.o.b. Montreal.

CUT NAILS—Market conditions are now steadier, and some jobbers are advancing prices. Our price is firmly held at $2.20 per keg base, f.o.b. Montreal.

HORSENAILS—A good business is being transacted. Our quotations are: P. B. new pattern, base price $3.50 per 100 lbs.; M. R. M. Co., latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs. extra.

SPORTING GOODS—Guns are moving better as the season advances, and all lines of Fall goods are selling readily.

BUILDING PAPER—No changes are reported, the trade continuing quiet.

CEMENT AND FIREBRICK — There are lots of small orders for cement coming to hand right along, but large specifications are wanting. The firebrick trade is quite dull—more than usually quiet, even for August. We quote as follows: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—The present week has seen a general advance in prices, which are now quoted as follows: 5-16 inch, $4.30; 3-8 inch, $3.80; 7-16 inch, $3.60; 1-2 inch, $3.40; 9-16 inch, $3.35; 5-8 inch, $3.25; 3-4 inch, $3.10; 7-8 inch, $3.05; 1 inch, $3.

GREEN WIRE CLOTH—Business is about over for this season. The price remains: $1.45 per 100 square feet.

AMMUNITION — Nearly every order that goes out contains its quota of ammunition. We continue to quote as follows: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Aug. 24, 1906

The discounts on poultry netting have been increased from 50 and 5 off to 50, 10 and 5 off. Trade in this line is lighter just now as might be expected at this season of the year.

An open market still exists in wire, many jobbers still quoting $1.95. There is a feeling, however, that things should be changed, but whether or not it will materialize is uncertain.

Business may be said to be slacking off a little, although for this time of year it is quite up to the best of previous years.

AXES AND HANDLES—Trade has picked up during the past few days.

CUTLERY AND SILVERWARE—A marked increase is noticed in general lines.

SPORTING GOODS—Ammunition is selling in large quantities, and the sporting goods trade generally is good.

WASHING MACHINES — A very good demand still exists.

CHAIN—We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; 3-8 inch, $3.95; 7-16 inch, $3.80; 1-2 inch, $3.65; 9-16 inch, $3.55; 5-8 inch, $3.45; 3-4 inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING—A larger discount has been made on 2-inch mesh netting; other sizes remain the same. We quote as follows: 2-inch mesh 19 w.g., discount 50, 10 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE—We quote: $2.17 1-2 f.o.b. Cleveland.

BARB WIRE— We quote the following prices: On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65; f.o.b. Toronto.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The open market continues. We quote: $2.05 base.

CUT NAILS—We quote: $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7 1-2 off list. "M.R.M." brand, 55 per cent. off. "Monarch" brand, 50 and 7 1-2 off. "Peerless," 50 per cent. off.

HORSESHOES—Our quotations continue as follows: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

HORSE BLANKETS—Trade is good. Some large orders are coming in.

SLEIGHBELLS—Orders are picking up some, but generally speaking they are light.

FARM TOOLS— Manure forks are moving and hay forks are still selling.

RIVETS AND BURRS—Tinned rivets are now quoted net extra 4c. per lb.

SCREWS—We quote: On gimlet point 70 and 5 per cent. off; on cone point, 70 and 10 per cent. off list.

BOLTS AND NUTS—Stocks are bare and supplies very hard to get. Demand is keen with prices very stiff. We quote 55 and 10 per cent. off list.

CEMENT—We quote: For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch fire brick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27 1-2c. to 35c.

WOOL AND HIDES—Hides are ¼c. lower and calf skins 1c. There is little new in the situation.

Hides, inspected, steers, No. 1	0 12½	
" " " No. 2	0 11½	
" " cows, No. 1	0 12½	
" " " No. 2	0 11	
Country hides, flat, per lb., cured	0 11½	
Calf skins, No. 1, city	0 13	
" " No. 1, country	0 12	
Lamb skins and pelts	0 75	
Horse hides, No. 1	3 15	3 60
Rendered tallow, per lb	0 05	0 05¼
Pulled wools, super, per lb	0 25	
" " extra	0 27	
Wool, unwashed fleece	0 16	0 17
" washed fleece	0 26	0 27

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 24, 1906.

In spite of excessive heat, and the presence of the holiday season, the metal trade is booming, and there is not a jobbing house in Montreal which does not report a remarkable business for the season.

Copper is none too plentiful on the Montreal market and, in consequence, the price we quote is firmly held for orders of the usual size. Some shading is being done, however, on orders of greater volume.

Ingot tin has, since our last report, gone up and come down again. As usual, it is hard to predict with any degree of certainty how this metal will hold, even one day ahead. At time of writing the same prices are being quoted as ruled a week ago.

Antimony has disappointed the expectations of market authorities, who had fully expected to see higher prices current this week. No change has been made in our quotations.

Pig lead shows a much stronger tone, and quotations have accordingly been advanced 5c. per hundred pounds.

So far as sheet metals are concerned, the entire market is in a healthy condition, and all prices are the same as were reported in our last issue. Metal jobbers who sell only, or mostly, from stock, do not find any exceptional demand for early deliveries, but importers who are now booking orders declare that inquiries are very active.

COPPER—Local stocks are not heavy and prices have continued steady, except on quantity orders, which will be quoted at somewhat shaded figures. Our prices are: Ingot copper, 21c. to 21½c.; sheet copper, base sizes, 25c.

INGOT TIN—During the week prices advanced but fell back again to last week's quotations, which are as follows: 44c. to 44½c. per pound.

ZINC SPELTER—The Canadian market is very firm, and reflects the strength shown in London. Dealers here say that prices will have to go up if any further advances are made in the European markets. We still quote in the meantime: $6.75 to $7 per hundred pounds.

ANTIMONY — Conditions show no change this week, and we are still quoting 27c. per pound.

PIG LEAD—Another upward movement has taken place, bringing the price up to $4.45 to $4.55 per hundred pounds.

PIG IRON—Good tonnages are being booked by the Montreal metal merchants. Prices remain as follows:

"Dom.," No. 1 $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.50	"	"
" (special)	21.50	"	"
Summerlee No. 1	21.50	"	"
" No. 3 (soft)	20.50	"	"
Clarence No. 1	19.50	"	"
" No. 3	19.00	"	"
Cleveland No. 1	19.50	"	"

BOILER TUBES—We still quote: British and American tubes, 1¼ inch, 8½c.; 2 inch, 8½c.; 2½ inch, 10c.; 3 inch, 12c.; 3½ inch, 15¾c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Business is brisk at the following quotations: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror High Speed Steel, 60c.; Jowitt's Diamond J., 6¼c. to 7c.; Jowitt's Best, 11c. to 11½c.

MERCHANT STEEL—Business is fairly brisk. We give the following prices: Sleigh shoe, $2.17½; tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.15 base and upwards; square harrow teeth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—Prices remain: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—Prospects are for higher prices in the near future. Trade is strong. We quote: Queen's Head, 28 gauge, $4.35 to $4.60; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26

gauge, $4.10 ; 22 and 24 gauge, $3.55 ; 16 to 20 gauge, $3.40 ; Bell brand, 28 gauge, $4.40 to $4.45 ; Fleur-de-Lis, 28 gauge, $4.20 to $4.45 ; 26 gauge, $4.05 ; 22 and 24 gauge, $3.50 ; 16 to 20 gauge, $3.35 ; Gorbal's "Best Best," 28 gauge, $4.25 to $4.50; "Windmill Best," 28 gauge, $4.15 ; Sword and Torch, 28 gauge, $4.15 ; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—We are quoting: 28 gauge, $2.40 ; 26 gauge, $2.35 ; 22-24 gauge, $2.30 ; 19-20 gauge, $2.30 ; 8-10 gauge, $2.45.

CANADA PLATES—Heavy bookings are now being made. Quotations remain : 52's, $2.60 ; 60's $2.65; 75's, $2.75 ; full polished, $3.75 to $4 ; galvanized, 52's, $4.10 ; 60's, $4.35.

TIN PLATES—The market remains steady at the following prices: Cokes, base size, 1C 14 x 20, $4; charcoal, base size, 1C, 14 x 20, $4.25.

TERNE PLATES—We still quote $6.85

SHEET ZINC — In view of the strength now shown by spelter, the following prices are very firm : $7.75 in casks: $8 in less than casks.

SHEET LEAD — Market conditions are unchanged and we quote : 2½ lbs., 5¾c. by the roll 3 lbs. and heavier, 5¼c. by the roll; small quantities, 25c. per hundred pounds extra.

BAR IRON—We are still quoting $2.05 base, f.o.b. Montreal.

OLD MATERIAL—More inquiries are now being received for cast scrap, both in stove plate and No. 1. Prices current are about $12 and $15 per gross ton. Wrought scrap is also in fair demand at from $13 to $14. Rubber is a little firmer, and maximum prices show a slight improvement. We now quote : Light copper, 14½c.; heavy red brass, 14¾c.; yellow brass, 11¼c.; light brass, 8c.; lead, 3¼c.; zinc, 4c.; machinery cast scrap, $15; wrought scrap $13 to $14; stove plate scrap, $12; mixed rags, $1 to $1.20 per 100 lbs.; old rubbers, 7⅜c. to 8c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Aug. 24, 1906.

The hot weather during the past week has caused the closing down of many foundries and plants, this affecting the consumption and production of some lines of metals. On the whole, however, trade has continued very lively, the volume being quite large for this season on account of probable advances in several lines and the general strengthening tone to the market.

Middlesborough pig iron has been advanced from $22 to $23 in response to conditions outlined in previous reports. Reports that production in the States is falling behind consumption is adding considerable tone to the market and orders are now being booked for the first half of 1907.

Tin has fluctuated some during the week and has been advanced locally one cent, 43c. being the ruling price, but some dealers quoting 44c. It appears to be again working its way back to its former high position.

Lead and zinc spelter are strengthening outside and are firm locally.

PIG IRON—As indicated a week ago, further advances have been made, Middlesborough having been advanced $1 per ton. Our quotations are as follows: Radnor at furnace, $33; Hamilton at furnaces, No. 1, $21 ; No. 2, $20.50 ; Londonderry, f.o.b., Toronto, No. 1, $22.50 ; No. 2, $21 ; Middleborough, $23.

BAR—Stocks are bare and hard to replenish. We quote: $2.15 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

INGOT TIN— Advances in outside markets have been followed locally and 43c. and 44c. are now being quoted.

TIN PLATES—Trade is active with prices unchanged. We quote: Cokes, base size, 14x20, $4 ; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS—Generally demand is good and prices are steady. We quote : 16 to 20 gauge, $3.65 up.

BRASS—The market continues firm with no price changes. We quote: 23c. to 24c. per lb.

COPPER—Prices are firm at the same quotations. Our prices are : Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

LEAD—The market outside is advancing but we continue to quote $4.50 for imported pig and $5 per 100 for bar lead.

ZINC SPELTER—The market is firm and prices remain unchanged. We quote : 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

BOILER PLATES AND TUBES — We quote: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60 ; tank plates, 3-16 inch, $2.45 ; tubes, per 100 feet, 1½ inch, $8.50 ; 2, $8.80 ; 2½, $10.75 ; 3, $12 ; 3½, $15.80 ; 4, $20. Terms, 2 per cent. off.

ANTIMONY—Good business is being done in small lots. Prices are unchanged at 27c.

OLD MATERIAL — Dealers' buying prices are as follows : Heavy copper and wire, 15c. to 15½c. per lb. ; light copper, 13½c. to 14c. per lb. ; heavy red brass, 13c. per lb. ; heavy yellow brass, 11c. per lb. ; light brass, 8¼c. per lb. ; tea lead, $3.25 per 100 lbs. ; heavy lead, $3.50 per 100 lbs. ; scrap zinc, 4½c. per lb. ; iron, No. 1 wrought, $11 ; No. 2 wrought, $3 to $5 ; machinery cast scrap, $15 ; stove plate, $10 ; malleable and steel, $5 ; old rubbers, 7⅜c. per pound ; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—We quote the following prices: Anthracite in cars at bridge, egg, stove and nut, $5.40 ; grate, $5.15 ; pea $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines : Lump, $1.50 ; ¾ inch, $1.40 ; run of mine, $1.30 ; nut, $1.25 ; N. P. and S., $1 ; slack, 75c. ; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges : 1¼ inch, $2.55 ; ¾ inch, $2.45 ; mine run, $2.35 ; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

From the Iron Trade Review, Cleveland, Aug. 23, 1906.

In spite of the fact that seven blast furnaces, having an annual capacity of 880,000 tons of pig iron, have been blown in since December 31, 1906, and that there are sixteen furnaces now in course of construction, the product will not be more than enough to meet the very heavy demand which promises to continue through next year. The Iron Trade Review estimates that the pig iron production for 1906 will be 25,750,000 tons, for 1907, 27,250,000, and 1908, 28,180,000. This would make the year 1908 show an increase over the actual product of 1905 of less than 23 per cent. In the three years from 1902 to 1905, the increase was 29 per cent. The evidences are, therefore, that the blast furnaces now being built will not increase pig iron capacity at the rate which the market has heretofore stood and stood extremely well, considering the almost famine condition prevailing at the present time.

Pig iron still occupies the centre of the stage, the demand during the past week being very active with prices showing further advances. In some centres feverish conditions are apparently subsiding and both buyers and sellers are showing a disposition to wait, especially, before entering into contracts for next year's requirements, but for the most part the week has witnessed keen anxiety in the buyers to place orders and of their failure in many cases to get iron for prompt shipment. In the south from $15 to $16 is being obtained easily for spot shipment and while some sales for the first half of next year have been made at $14.50, $15 more nearly represents the market. In the east, the scarcity seems to be confined largely to steel making irons. The sales in the New York district included 25,000 tons of basic, 5,000 tons of foundry, and 4,000 to 5,000 tons of grey forge. In the central west, sales include 15,000 tons of basic at $18 valley and 120,000 tons of Bessemer at $18.25 valley, both for delivery during the first half of next year. Both Bessemer and basic for the first half are scarce and one large buyer has not succeeded in placing an order for 75,000 tons of Bessemer. In both Chicago and Cleveland No. 2 foundry has been sold at $20. One large electric interest is inquiring for 16,000 tons for delivery at Allegheny and Cleveland and many other buyers are in the market. The general expectation is that still higher prices will prevail throughout the country.

The principal contract throughout the week in structural material was for 42,000 tons for the new Manhattan bridge taken by the Jones & Laughlin Steel Co.

through its Cleveland agency. Some large inquiries for bridge material are pending, but actual business in shapes is not heavy at present.

U.S. IRON AND METAL TRADES.

From the Iron Age, Aug. 23, 1906.

The iron market continues to outdo all August records and in some lines all records of whatever month. For example, the leading producer booked 200,000 tons of wire products in the first 17 days of August. So far as large interests are concerned all their resources will be used to prevent runaway prices or any feverish scramble for pig iron and finished material. The United States Steel Corporation's policy is neither to bid up such raw materials as it buys nor to beget excitement by asking premiums for early shipment of anything that it sells. Since the beginning of August it has been prorating deliveries in nearly all finished products, and the indications are that its customers will be asked to take something less than their specifications for a number of months.

The advance in pig iron prices has been carried farther in the past week and the buying for 1907 has broadened. Comparatively little iron, either northern or southern, can now be had for delivery, this year, and yet there is no such frantic call for spot iron from consumers with bare yards as characterized the situation in 1902, for example. The buying of foundry iron has been in part for this year, but chiefly and in large lots for the first quarter and first half of 1907. Southern producers are now selling No. 2 foundry freely at prices netting $15, Birmingham, for next year's delivery, and on smaller business have secured the equivalent of $15.50, Birmingham. In the central west $18 at furnace for No. 2 foundry is the rule, and the scarcity of iron for this year's consumption is more marked.

Steel making iron for 1906 cannot be had in the central west, though it is not certain that all eastern producers are completely sold up. Bessemer pig iron has advanced to $18 at valley furnace, and the available product for 1907 is being held at $18.25 in some cases. Of the sales reported last week, that of 70,000 tons is really a sliding scale transaction under an old arrangement. The steel corporation is not buying iron for 1907, and has ceased to be a buyer of melting scrap for 1906 for the same prudential reason that has taken it out of the pig iron market for this year.

British pig iron markets have advanced in response to conditions in Germany and the United States. The long deferred hope of American demand that was the chief prop of the speculation in Middlesborugh warrants last year is now revived. But prices have advanced 2s. in two weeks, and No. 3 iron is now 53s. 9d, so that the expectation of exports to this country is helping to make them impossible.

The steel shortage is pinching in several lines of steel corporation production, but its customers for semi-finished steel and rods are being taken care of.

Rail orders are again coming in on a liberal scale, and Cuban and other outside inquiry is accumulating. A southwestern line is in the market for 25,000 tons, and in the past week 35,000 tons was booked for 1907 delivery. Light rails have advanced $1 a ton.

Structural mills are filling up, the principal contract of the week being 34,000 tons of steel for the new Manhattan bridge, taken by the Phoenix Iron Co. Most of the plates will be rolled in Pittsburg. The Ford building, Detroit, 4,000 tons, was let last week, and Philadelphia reports two orders, amounting to 4,600 tons. Large inquiries for steel cars are coming up, and bids have been asked for 30,000 steel or steel underframe cars for 1907, including 14,000 for the Harriman lines and 4,500 for the steel corporation. Locomotive works also report exceedingly bright prospects for next year.

The tin plate mills are being pressed for deliveries to the can manufacturers, the canning industry reporting exceptional activity.

The $2 premium on steel bars asked by one Pennsylvania interest reflects the strong condition in that market, but an official advance is not imminent. Western iron mills are asking $1 advance, following half way the recent action of the Republic Iron & Steel Co.

Wire mills, in spite of unprecedented sales, are in no hurry to mark up prices

LONDON METAL MARKETS.

From Metal Market Report, Aug. 21, 1906.

PIG IRON— Cleveland warrants are quoted at 53s. 7 1-2d. and Glasgow standard warrants at 52s. 3d. making prices as compared with last week 1s. 6d higher for Cleveland warrants and 8d higher for standard warrants.

TIN—Spot tin opened easy at £182, futures at £182 5s., and after sales of 200 tons of spot and 320 tons of futures closed firm at £182 10s for spot, £183 for futures, making price as compared with last week £2 3s. 6d higher on spot and £2 17s. 6d higher on futures.

COPPER—Spot copper opened quiet at £84 15s., futures £84 12s. 6d. and after sales of 200 tons of spot and 700 tons of futures, closed steady at £84 15s. for spot and £84 12s. 6d for futures, making price as compared with last week £1 5s. higher on spot and £1 7s. 6d higher on futures

LEAD—The market closed at £17 2s. 6d. making price as compared with last week 2s. 6d higher.

SPELTER—The market closed at £27 making price as compared with last week 5s. higher.

FAIR VISITORS WELCOME.

The Canada Paint Co. will be glad to welcome all their friends who are visiting in Toronto during Fair week, to their sales offices at 90 Bay street.

Nova Scotia Trade News.

Halifax, N.S., August 22f

Considering that this is the dull season in the hardware business, trade here is fair, in fact it may be stated that it is unusually good for the time of year. The market is steady and there is practically no change in prices since last report. The outlook for a big Autumn trade is good, and already some orders are being booked. There is a probability of an upward movement in the prices of shelf hardware. There is a good demand for cement and the Sydney product is still selling freely. English cement in small lots is quoted at $2.25. Turpentine is quoted at 95c. in cask lots. Ingot tin is reported to be firmer in London. It is quoted here at 48c. to 50c., and the demand at present is light. The leading lines are quoted here as follows :

Steel—Tire, $2.75 ; spring, $3 ; machine, $3.25 ; toe caulks, $3.50 ; base cast steel, 9c. to 12c.

Horse shoe nails—$12 for No. 8, $13 for No. 7.

Galvanized iron—$4 to $4.25.

Black sheet iron—$2.50 24 gauge.

Ingot tin—48c. to 50c.

Pig lead—$5.50 ; lead pipe, $6.25.

White lead, Canadian—$6.50 to $6.75 ; Brandram's, $7.50.

* * *

Mining men are taking considerable interest in the discovery of a seven-foot seam of coal made recently at Port Richmond, Richmond County. The big seam was reached at a depth of 200 feet. The quality is said to be excellent. Doubtless this discovery means much for Richmond County and a large outlay tending to its development will soon be made.

* * *

The Dominion Coal Company are considering and now have plans under preparation for the re-opening of Victoria mines, in Cape Breton. The plans are for three seams to be worked from one bankhead.

* * *

A number of Moncton capitalists are engaged in developing a gold mining property situated at Miller Lake, in Guysboro County. The property is situated about six miles from the Ecum Secum gold fields and is known as the Fairweather fields. The company holds 27 areas on the Grogan anticline. There are seven leads in a thirteen-foot working belt, pitching east and dipping north. The leads are said to be highly mineralized, carrying copper, galena, iron and lime, with a fair showing of gold.

A new company has recently started work on the Ecum Secum property and the work of pumping out the old shaft is now going on. This mine has been closed down for about two years.

* * *

W. A. McKay, electrical contractor, of Sydney, has opened a branch here, near Senator's Corner. A very complete line of electric fixtures is carried in stock and wiring, repairing and installation of electric light plants is done promptly and by experienced electricians. There is shown in the firm's window a most attractive electric sign of changing colored lights, the colors automatically changing every few seconds.

Hardware and Metal Conditions in Manitoba

(Market quotations corrected by telegraph up to 12 a.m. Friday, Aug. 24, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

Jobbers report no appreciable let up in the demand for general hardware supplies and August of this year will go down on record as the busiest August since Winnipeg became a wholesale centre. Threshers' supplies are in strong demand at present. Values are steady in most lines, a reduction in turpentine being the most important quotable change.

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE — We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ¼ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅜ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅝ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅝ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ⅜, $4.10; ¼, $7.20; ⅝, $4.60; ½, $4.30; ⅞, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—Discount on "Irwin" bits is 47 1-2 per cent., and on other lines 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES—As noted last week, the price is now 1 1-2c. per lb. A decline of 1-4c.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

CLEVISES—Price is now 6 1-2c. per pound.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discount is 50 per cent.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Quoted now at 4c per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC.—As noted last week, shot has been advanced 25 cents per 100 lbs. We quote prices as follows: Cartridges, Dominion R. F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33⅓; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.25; chilled, $7.75; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—Prices are: Bar iron (basis), $2.50; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jesson $13.00.

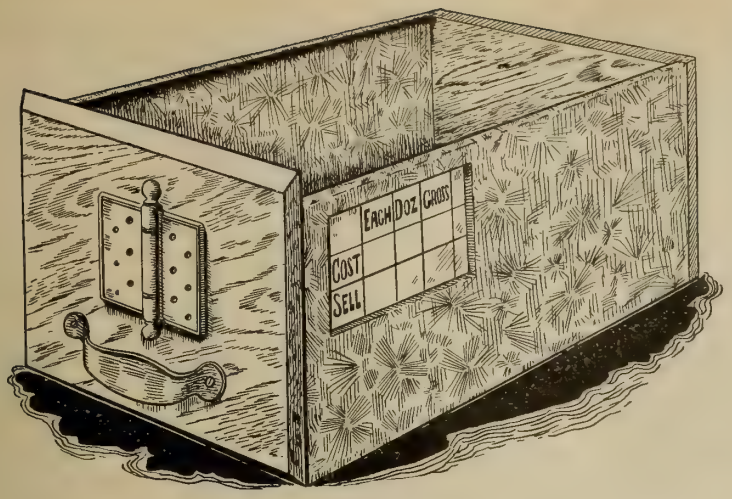
SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—Prices are very firm. $5.25 per cwt. with a reduction of 25c. per cwt. on ton orders.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.



TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are quoted as follows: Silver Star, per gal., 21c.; Sunlight, 22c.; Eocene, 24c.; Pennoline, 25c.; Crystal

An Attractive Hardware Store

is the best advertisement you can have, for it appeals to every one of your customers and will draw their trade as sure as a magnet will draw a piece of steel.

Give your store an air of prosperity. Make it look as if you were doing the best business in the town. If your store looks like a second-hand junk shop people will feel like paying second-hand prices.

If your goods are well displayed on shelf boxes your clerks will be able to wait on twice as many customers.

Goods displayed on shelf boxes often suggest articles which your customers had not thought of buying.

The **Bennett Shelf Box** has metal sides and saves 20 per cent. space over the old-fashioned wooden box. It has oak fronts and each box is supplied with a brass pull.

Write for price list.

London, Ontario, Trade News

London, Ont., Aug. 22, 1906.

Though this is the fag end of the Summer season and trade is dull in seasonable goods, the hardwaremen of this district are enjoying better business than they have for some time. The Summer business was good, exceptionally so, and a tour of inspection about the city of London would not likely reveal many left-over lawn mowers, much garden hose or many hammocks, in fact, everything of like season has been well sold out.

* * *

The wholesale trade in London reports good business in keeping with what is said by the retail men. D. H. Howden & Co., for instance, who moved into one of the finest warehouses in London last April, report having been justified in extending their business facilities. The trade about here is gaining continually.

* * *

The chief reason for the improvement in retail conditions is the extensive building that has been experienced in London this Summer. There have been no strikes here and people are working overtime. Those who supply builders' material have done an exceptionally big business. The hardwaremen who do the greatest glass business report an impetus to their business by the building.

* * *

Fred Wyatt, son of Ald. William Wyatt, former hardwareman, will shortly open his new hardware store on Talbot street. Mr. Wyatt, jr., has been at work for some time on the alterations to the store and expects to open within a few weeks. It is said he will have one of the biggest hardware stores in London.

* * *

The Waggoner Ladder Co. gave the fire department a run the other day, but the blaze was extinguished by the chemical engine so that the damage was scarcely more than $10.

New Brunswick Trade News

St. John, Aug. 20.

While there is nothing to make the present a noteworthy time in provincial hardware circles, it is the consensus of opinion, so far as we can learn, that the trade conditions are fairly satisfactory. The volume of business being done is, on the whole, of respectable proportions and no untoward circumstances are tending to injure trade. The preceding sentence, perhaps, may be qualified somewhat. Serious forest fires are reported from various parts of the province and much valuable timber is in danger of destruction. The destroying of good timber means injury to the lumber industries and indirectly to all lines of trade. But fear of detriment to the hardware trade because of these fires is probably a trifle unreasonable. Certainly, there is no prospect of immediate effect.

* * *

The demand for guns and ammunition is springing up again with the approach of fall. In recent years these lines of goods have become even better sellers as the enjoyments of hunting are more thoroughly recognized. This year it is believed that their sale will be even better than in other seasons. The strength of the lead market is having its effect upon the price of huntsmen's supplies as upon the price of many other goods. Shot, as was of course to be expected, is now firmer than a short time ago. Further advances in price are apparently not altogether unlikely.

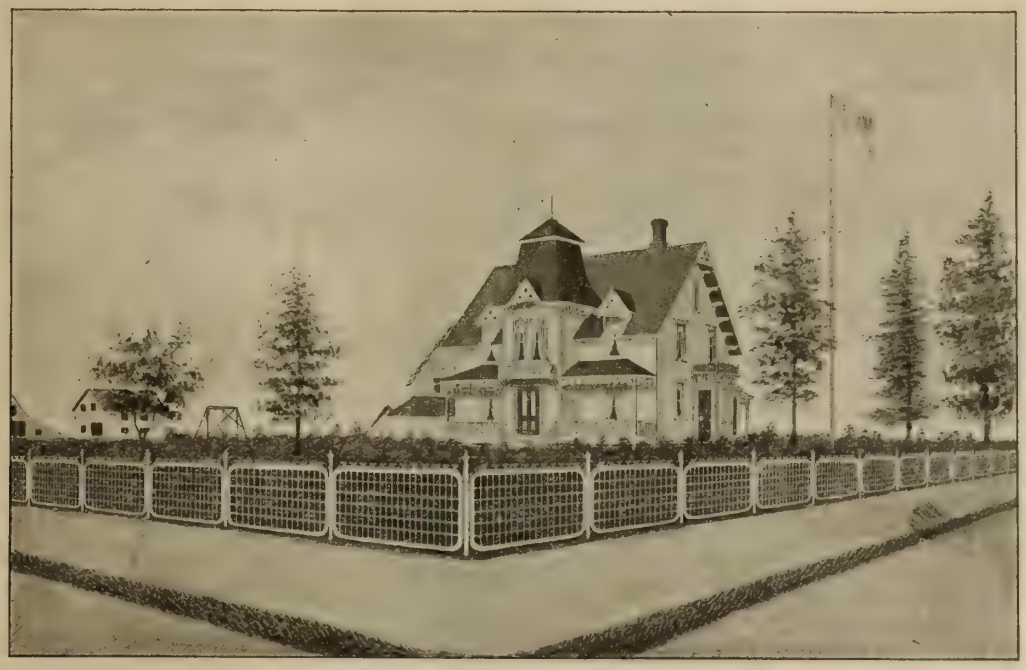
* * *

Recently the dealers have been notified of another advance in the prices of United States shelf hardware. This is the third advance in a comparatively short time. As the demand for goods that come under this head is excellent the advances are not causing any perturbation among the merchants. There is no sign of any slackening of this strong demand.

* * *

The call for building materials is being heard pretty frequently in a number of our provincial towns. In St. John the amount of building being done is perhaps a little less than the average but the reverse is the case in some of the smaller towns. In Moncton not only are the new I.C.R. shops now under way, but a good many other buildings are being put up. In Fredericton, Sackville, etc., the builders are also among the busiest of men. Probably Amherst, just across the border in N.S., has the distinction of having more building going on within its borders than is being done in any other Maritime Province town. The demand for builders' materials is naturally brisk in the province.

British Columbia Trade News



Vancouver, B.C., Aug. 17 ,1906.

The "Iron Chink" is the suggestive appellation for an ingenious machine designed and built to take the place of the ubiquitous Chinaman in the salmon canneries. It is well known that the Chinese is the chief and dependable operative in the numerous coast canneries. He is deft and rapid and is always at his post, a quality which has been a strong factor in commending the oriental labor to canners. But with the $500 head tax and the consequent practical cessation of Chinese immigration, the number of operatives at the canneries has grown harder to keep up. The new machine is designed to take the place of quite a number of them, rendering still more completely automatic the method of canning salmon, now the most highly specialized industry of its kind. There is perhaps in on other line of canning industry such a variety and excellence in the automatic devices for labor saving and for carrying on the work of making, filling, packing and sealing the cans with almost no intervention of manual process. But the number of hand processes will be still further reduced when the "Iron Chink" takes the place of the pigtailed "Chink" as he is colloquically known on the coast. A local syndicate has the patents and is preparing to market the new machine.

The American barque Alden Besse, owned by Awaya, Shinazo & Co., a Japanese firm of importers an manufacturers at Osaka, Japan, is in port with a cargo of Japanese oak. The timber was brought in the rough, or log, and is to be sawn at the Pacific Coast Lumber Co's mill. The shipment comprised about 500,000 feet. Messrs. A. P. May & Co., hardwood merchants of this city, were interested in the importation. They say, however, that the next consignment will be brought forward in the rough, sawn state, as there is too much waste material to be paid for as cargo when the logs are brought. To this end, when the next Empress sails she will take out a complete saw mill outfit, which will be set up on the timber areas from which the oak is obtained, and there the logs will be sawed up into dimension lumber. The quality of the Japanese oak, of which small trial shipments have been brought in before, is very good. The size is rather below the medium for oak.

Lumbermen are preparing for another fight with the provincial government with respect to the enforcement of log-scaling fees. Very recently the Timber Measurement Act came into force under which a number of official timber scalers were appointed, a supervisor being placed over them, with power to collect fees for scaling all timber cut on provincial lands. The fee is fixed at 5c. per thousand, and is to be collected irrespective of whether the timber was cut on leasehold or licensed land. The timbermen make the argument that in so far as leasehold is concerned, there is a definite contract entered into, in the lease, and the Government has not the power to afterwards alter the conditions in the lease, by imposing any fresh fees or costs. The supervisor of scalers has been instructed to go ahead and collect the fees, and he says that after 30 days grace he will proceed to do so. The

Horse Nails

In buying his Nails, the farrier usually is particular to select a brand that he knows can be relied on to give satisfaction. It does not pay to handle inferior Nails simply because they are cheap, as in the long run the best is the cheapest.

"M" brand HORSE NAILS

have the reputation of always being up to standard.

Made from Swedish nail rods, the best known material for the purpose.

PATTERN is right and cannot be excelled.

The POINTS (a most important feature about a horse nail) are always the same, and there are no better pointed nails in the world than the "M."

Every Nail carefully inspected before leaving our works, insuring freedom from culls.

MADE BY

THE MONTREAL ROLLING MILLS CO.

measurement of logs by the official scaler is accepted by both buyer and seller, and of course renders unnecessary any scaling by owners or mills, in buying logs.

Base price of wire nails has been dropped from $3.50 to $2.85 by all manufacturers, for Vancouver delivery, owing largely if not entirely to the fact that there is a local factory here, which is turning out good quality of wire nails. The factory was burned down last year but has been rebuilt and the business is being re-established firmly. The raw material in the shape of black rods for drawing into wire, is imported from England and the rest of the work, including the galvanizing, is done in the factory here.

It is stated that the Great Northern Railway Co., has acquired a large holding of land at the head of Howe Sound, for the purpose of building a town. Howe Sound is but a few miles north of Vancouver, being, in fact, the first indentation of the coast north of Burrard Inlet. It is easily accessible from the Gulf of Georgia into which it opens, and from the head of the sound there is a practicable route for railway across the coast range of mountains into the Lillooet and Pemberton Meadows country. From Howe Sound the V. W. & Y. Railway is surveyed round the coast into Burrard Inlet (Vancouver harbor).

The Britannia mine on Howe Sound, the big copper producer of the coast, is now turning out 700 and 800 tons of ore per day and more could be produced but that is the limit of the capacity of the aerial tram line from the mine to tide water, where the ore bunkers are situated. There is every prospect that the tram will be duplicated when the carrying capacity will be from 1,200 to 1,500 tons per day, and the output of the mine can easily be increased to that amount. Capt. Henry Stern, of New York, the newly appointed general manager to succeed the late Geo. H. Robinson, is now in the north inspecting the Mount Andrews iron properties at Prince of Wales Island, which were secured on a long term bond by the late Mr. Robinson. The Britannia company has been developing the property and putting in an ore carrying tram, which is nearly completed. The Mount Andrews ores form a perfect flux for the silicious ores of Britannia. At present the Britannia smelter gets ore from the Brown-Alaska property at Port Hadley, Prince of Wales Island, for fluxing purposes, and the Hadley smelter gets Britannia ores in return, for the same purpose.

While ore production in the Boundary mines for the month of July was hardly up to the average, being only 83,351 tons, the pay roll of the district was perhaps as large as ever, through the large number of men on railway and other construction. When preparations at mines and smelters now in progress are completed, there will be an increase in output which will make the total nearly 150,000 tons per month.

THE MUSCULAR METHOD.

Business men who are discourteous to travelers are, I believe, comparatively few, notwithstanding the number of complaints which occasionally one hears from "Knights of the Grip." The merchant who is discourteous, in the long, run, pays for it. Sometimes in one way, sometimes in another. He may not be conscious of it, but he has to "pay the piper" nevertheless. As a rule, it is by being ignored when what are commonly called snaps are to be offered by the travelers who have been the victims of the discourteous treatment. But occasionally physical force is resorted to by offended travelers. I heard of one recently. A traveler, whom I have known for a number of years, had occasion to call on a merchant with whom he had hitherto not had occasion to do business He entered his store, presented his card. Without even reading the latter the merchant threw it contemptuously upon the floor. It was not that he had any grievance against the traveler, or the house he represented. He had never had any dealings with either. It was merely his way, the traveler afterwards learned, of treating travelers. My friend was naturally very much annoyed at the contemptous treatment which he had received. He is a man in the neighborhood of 70 years of age, but is still vigorous, and when insulted is not slow to resent it. The offending storekeeper was tall and much younger than my friend, but that did not make any difference to the latter. "I want you," he said, "to pick up my card." This enraged the merchant and he began jumping around, wildly gesticulating and saying he would kick my friend out unless he quickly got out. Undaunted the latter suddenly reached out and grabbed the merchant by the shirt collar, pressed his knuckles against his wind pipe, shoved his nose to the ground, holding it there until he had picked up the card and given it back to him. The traveler, of course, told his experience to his fellow travelers. That merchant for many a day had to bear a great deal of banter, and what was still more humiliating, he found it necessary to take into stock the line of goods which my friend's firm manufactured.

IMPLEMENTS FOR BORNEO.

A letter has been received at the agriculture department from a Canadian who occupies a responsible position on the British North Borneo administration, which indicated Canadian farm implement makers may be able to work up a profitable business there. The planters of the colony are unable to obtain plows, wagons, etc., which are both strong and light. He is confident the Canadian made articles would fill the bill.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

Traveller Wanted.

Good position open for party of exceptional ability to sell a complete line of up-to-date stoves and furnaces in Manitoba and Northwest, a line well known. Excellent opportunity. One with furnace experience preferred. Addrees, in confidence, Box 550, Hardware and Metal, Winnipeg.

KEMP'S INVITATION.

The Kemp Manufacturing Co. extend a cordial invitation to their customers visiting Toronto during the Exhibition, to make use of their offices, corner of Gerrard and River streets, where they will find daily papers, material for correspondence, and a clerk thoroughly conversant with the city, whose duty it will be to get and give information desired by visitors. They will also be glad to lend their shipping facilities to those making purchases in the city, either by shipping separately or with goods that may be going to them. The Kemp factories are well worth visiting.

Cutlery is a good line to push at this season—pocket knives for the boys, paring knives for the housekeepers and carving sets and plated ware for wedding presents.

FOUNDRY AND METAL INDUSTRIES

DOMINION PRESSED STEEL CO.

The Dominion Pressed Steel Company, of Port Elgin, Ont., have their shovel plant about ready for work. The factory is built of concrete, 50 by 160 feet. The main building is three storeys high with a felt and gravel roof, and concrete floor on the lower flat. There will be seven furnaces at the commencement, run with oil fuel. The oil is atomized by an air blast furnished by a Sturtevant fan. There will be four power hammers, two of 600 pounds, one of 400 and one of 100 pounds. There will also be eight power presses. The strop rolls is a ponderous machine put in at great expense. A separate building will contain machinery for making their own handles. The workshop will have two power lathes, planer, drill, grinder and forge. A 100 h.-p. Goldie-McCulloch engine with two boilers will supply the power. The plant is well situated for shipment of goods, being near a spur line which connects with the Grand Trunk, and lake boats. The firm are to be congratulated on their up-to-date plant, and the enterprise shown in establishing this industry.

STEEL DIVIDEND INDICATES PROSPERITY.

The declaring of a dividend on the vast volume of common stock of the United States Steel Corporation, though it amounts to only one per cent. for half a year, is evidence that the steel industry is in one of its periods of prosperity. The net earnings for three months ending with June were over $40,000,000, or greater by nearly $2,500,000 than in the "record" quarter of 1902. For the half year they were over $76,750,000, and at the same rate for the second half would exceed by $20,000,000 the record of that year, when four per cent. was paid on the common stock.

After payments on account of bonds and sinking funds, and the seven per cent. dividend on the preferred stock, and an allowance of over $5,600,000 for depreciation and reserve funds, there remained $20,731,106. Out of this, $15,500 000 was allowed for improvement and replacement funds and special appropriations and additions to property. This left a surplus of $5,231,000, which with the $5,567,000 left over from the March quarter made $10,798,106, out of which the one per cent. on the common stock, amounting to $5,083,025, is to be paid on the 1st of September. All this looks like conservative calculation in view of the large orders on hand and the prospect for continued activity in the business, and yet it may be questioned if with such a huge capitalization and the liability of the business to reaction, the reserve funds are sufficiently large for a bulwark against the chances of the future. The figures look large, but the possibilities of shrinkage are correspondingly large. It is only three years ago that the company failed to fully earn its preferred dividend.

But one thing certain is that the year 1906 promises to be a year of unexampled prosperity for the steel industry and for many other industries with which it has an intimate relation. It is a year of vast profits for the producing concerns which draw their income directly and indirectly from other industries. The $508,000,000 and more of common stock on which this dividend is paid, and which has a present market value of about forty dollars a share, represents practically only a special earning capacity due to the power to maintain prices because competition from other countries is excluded from the American market.

NEW SMELTING PROCESS.

Australian inventors claim to have perfected a new process for the treatment of iron ore. This method, called the Heskett-Moore Pattern, was given a test recently at Melbourne, where operations were in full force for the treatment of ferruginous ore for the manufacture of iron and steel, by a direct and continuous method of manipulation. A number of experts present expressed the opinion that the trial was most satisfactory, and that the process would revolutionize iron and steel manufacture. The Heskett-Moore process is a method of directly converting iron ore into valuable iron and steel, by a continuous system, and it is claimed effects a saving of 25 per cent. in manufacture. The inventors claim they can produce steel from one operation instead of using the blast furnace and converter.

Is Your Paint Business Growing, Moving Slowly, or Standing Still?

It's bound to be in one of these three conditions. If the first, well and good; if the second, there is something wrong somewhere; if the third, it's time for you to get busy or quit.

The Sherwin-Williams Agent is in the "business growing" class. Other conditions do not worry him. These four things, combined with his support and enthusiasm, are assurances of success always:

The *best* line of paints and varnishes that can be made.

Strong advertising helps that *sell* goods.

The S-W. Co.'s *assistance* and *co-operation* in going after business.

The reputation for *high quality* always maintained by *S-W. Products.*

Can you afford to remain in the second or third class when there is an opportunity before you to be in the first? You owe it to your best business interests to be there. *The S-W. Line* is the stepping stone to such a position—the stepping stone to a growing paint business. It is the Line that *gets* trade, *keeps* it, and *satisfies* it.

And you are not left to push the goods alone. *The S-W. Co.* is always behind you, working with you and for you.

Drop us a line today and get our proposition.

V. W. Hartman in the National Hardware Bulletin

This much-mooted question is of first interest and importance to the retail dealers in the smaller centres of population, for the reason that the catalogue houses put in their "best licks" to secure the farmers' trade, which naturally belongs to the retail merchants in the small villages scattered over the country.

It is a significant fact that not a single purely catalogue house sells a dollar's worth of goods to people living in the town or city where the business is carried on. It is not difficult to explain why this is true. The policy of all catalogue houses is to sell their goods by means of "descriptive" catalogues, filled with illustrations and elaborately worded descriptions of the various goods they have to offer. In other words, the purchaser "buys a pig in a poke," accepting the statement made in the catalogue as true. He pays cash in advance for goods, the quality of which he knows absolutely nothing. Not even a sample is placed in his hands. It may be said that the catalogues tell the truth within prescribed limits, yet when the goods are received, in how many cases do they prove to be all that the purchaser had anticipated or been led to believe they were by the ingeniously worded descriptions printed in the catalogue sent him?

How many farmers would buy a horse or cow from a stranger and pay him good money for it without at least making a personal examination of the animal before handing over the money? Yet it would be no more foolish to do that than it is to buy goods from a distant part of the country paying cash in advance for them, without first seeing what he is going to do.

Reputation Built on Quality.

If there is one article in common use that should be purchased with more than ordinary caution it is paint. It is practically impossible for the ordinary person to know whether he is getting good or bad paint. The manufacturer who caters to a restricted territory depends upon the permanent trade of practically the same people from year to year. He does not and cannot find a new market for his products from time to time, so he goes to, say, a hardware dealer in a town and says to him: "Mr. Smith, I am making a first-class, durable, honest line of paints. I want you to handle them for me in your town. I will advertise them for you, will guarantee them to your customers and co-operate in every manner possible with you to build up a permanent trade." In other words the paint manufacturer builds his reputation on the quality of his goods—depends upon the fact that his paint, being good, honestly made and capable of giving perfect satisfaction, will cause people to purchase and use them from time to time as their needs demand. He has an expensive factory requiring an investment of thousands of dollars to install and the expenditure of many more thousands to operate and maintain. His customers and their friends are always welcome to inspect his plant and see for themselves how he makes his paints. In short, he is practically in personal contact with every user o fhis goods.

But how about the catalogue house? An analysis of one catalogue house paint showed it to contain nearly 25 per cent. of water in the thinner and 50 per cent. of absolutely useless and detrimental organic matter in the pigment.

The purchaser, or consumer of paint, is practically at the mercy of the manufacturer, because he cannot know whether he is getting real paint or a cheap and inefficient imitation. His only protection is the honor and integrity of the manufacturer.

This being true, is it not reasonable to believe that the reputable paint manufacturer, especially if his business is located in the heart of the territory in which his paints are sold, is going to "Make Good Paint?" He has got to do it if his business lives and prospers. His success depends upon the continued patronage of the customers in his territory—not upon a single order from any one customer or set of customers. It is the steady demand of satisfied consumers that insures his prosperity and the continuity of his business.

Position of Mail Order Houses.

On the other hand, consider the position of the mail order paint houses. Their customers live in places far removed from the place where the paint is made and sold. Implicit dependence must be placed in the cleverly worded

(Continued on page 72.)

WHEN VISITING

TORONTO EXHIBITION

ARRANGE to meet your friends at our Exhibit, corner Centre Aisle and First Aisle, to right of Main Side Door, Manufacturers' Building.

The Imperial Varnish & Color Co. LIMITED

TORONTO, ONTARIO, CANADA.

JOIN THE "STANDARD" RANKS

Be known as one of the dealers who sell

Straith's Decorative Enamel

and thereby come in for a nice share of patronage.

This enamel is known from the fact that it always remains bright and attractive, and so gives new life to woodwork, furniture, earthen and metal ware. The tints and colors harmonize nicely with draperies and furnishings.

An order to-day means business to-morrow

THE STANDARD PAINT & VARNISH WORKS CO., Limited, WINDSOR, Ont.

REPEAT ORDERS ARE COMING IN

every day for

JAMIESON'S FLOOR ENAMEL

We have made it as perfect as we know how and do not believe it can be improved on at any price.

Order a small lot to try it. You will then know how pleasant it is to sell something really good for a floor. People will take the trouble to call back to tell you how well satisfied they are. They are doing it now as we know from many reports received.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Aug. 24, 1906.

Business continues very good, considering the season and the weather, and all lines of oils and paints are in splendid demand.

Turpentine stocks are low, although local dealers have not as yet advanced their prices; they will in all probability be compelled to do so before many days. In all other lines trade conditions remain without change.

LINSEED OIL — Prices have been steadily held since our last report, and we are still quoting: Raw, 1 to 4 barrels, 52c.; 5 to 9 barrels, 51c.; boiled, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.

TURPENTINE—From present indications figures will soon be advanced by the Montreal dealers. Our quotations are as follows' Single bbl. 86c. per gal.; two barrels or over, 85c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC— The market remains unchanged at following prices: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD—Conditions are unchanged since last report. Prices remain as follows: Genuine red lead in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

GUM SHELLAC—Prices remain unchanged as follows: Fine orange, 60c. per lb.; med. orange, 55c. per lb.; bleached shellac (white) 65c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—The market is on the quiet side. Our quotations are as follows: Firsts in cases, 8 1-2c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

GASOLINE—The ruling quotation at present is 24c. in bbls.

BENZINE—There is nothing new this week and we are still quoting 20 1-4c in barrels.

WINDOW GLASS—The retail business is large and many repeat orders are being sent in. We quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.95; third break, 100 feet, $4.25; fourth break, 100 feet, $4.50; fifth break, 100 feet, $4.75; sixth break, 100 feet, $5.25; seventh break, 100 feet, $5.75; eighth break, 100 feet, $6. Diamond star, first break, 50 feet, $2.05; second break, 50 feet, $2.25; first break, 100 feet, $3.90; second break, 100 feet, $4.30; third break, 100 feet, $5.25; fourth break, 100 feet, $6; fifth break, 100 feet, $7; sixth break 100 feet, $7.50; seventh break, 100 feet, $8.50. Double thick, first break, 50 feet, $3.20; second break, 50 feet, $3.50; first break, 100 feet, $6.25; second break, 100 feet, $6.50; third break, 100 feet, $8.25; fourth break, 100 feet, $9.50; fifth break, 100 feet, $11; sixth break, 100 feet, $12; seventh break, 100 feet, $13.50; eighth break, 100 feet, $16; ninth break, 100 feet, $17.50; tenth break, 100 feet, $19.50; eleventh break, 100 feet, $23.50; twelfth break, 100 feet, $28.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, August 24, 1906.

Linseed oil shows a marked advance over previous quotations, and the market is quite strong. Turpentine also is firmer and quoted at 89c. by the majority of houses, although, of course, there is the usual shading done by some jobbers.

Despite the fact that some big cutting has been done on white lead by one house the market price generally remains as before. The conditions of the white lead market at present certainly do not warrant selling it lower than the present quoted prices, and it is not at all likely that jobbing houses and manufacturers generally will make any effort to meet what seems to be a temporary break.

WHITE LEAD — Ex Toronto, pure white, $6.30; No. 1, $5.92 1-2; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; 1-2c. per pound extra will be charged for

PUTTY—Ordinary, bladders in barrels, $1.80; pure linseed oil, $2 to $2.10; bulk, in 800-lb. casks, $1.50; pure, $1.95 to $2; 100-lb. kegs, 25c. extra.

LIQUID PAINTS—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.

CASTOR OIL— English, in cases, 9 1-2c. to 10c. per lb., and 11c. for single tins.

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM— We quote: Canadian, $1.38; Pennsylvania, $1.64: Ohio, 98c.

MAIL ORDER PAINT.

(Continued from page 68.)

and often misleading statements in catalogues and letters. Cash in advance is demanded. When the paint fails to measure up to the standard of quality the consumer has been led to believe it possesses, it is next to impossible for him to obtain redress. The mail order house has no local reputation to make or to sustain. Its business is restricted only by the boundaries of the country, and in nine hundred cases out of a thousand anything like a satisfactory adjustment of the customer's complaint is impossible. The mail order people don't care. They have the money, the customer has the goods. So far as they are concerned the deal is closed and they see to it that it remains closed.

To illustrate some of the methods employed to impress upon the minds of paint customers not familiar with the details of how paint is made the alleged fact that theirs is the only and best kind of paint to use, I will quote several statements from an advertisement in the Saturday Evening Post of May 5, 1906, and then point out why they are misleading and impossible of accomplishment:

"My paint is unlike any other paint in the world. It's ready to use—but not ready mixed.

"After each order is received my paint is made to order, packed in hermetically sealed cans, with the very day it is made stamped on the can by my factory inspector. I ship my pigment —which is white lead, zinc, dryer, and coloring matter freshly ground and mixed after the order is received—in separate cans—and in other cans I ship my OLLO—which is pure, old process linseed oil—the kind you used to buy years ago before the paint manufacturers began to cheapen the cost of paint, worked in adulterations.

"My paint is made to order fresh for each individual order after the order is received."

False Statements Exposed.

The cost of production regulates in a large degree the price of any commodity in general use. In the manufacture of paints expensive machinery is required to mix and grind the raw materials to the proper constituency for use. An extensive and costly plant must be operated and maintained. It must be kept constantly at work in order to secure the maximum output at the minimum cost. To do this it is necessary to make each color or kind of paint in large quantities, because the mixing and grinding machinery is necessarily of large capacity and hundreds of gallons of paints must be turned out every day.

To anyone at all familiar with modern methods in vogue in the manufacture of high-grade paints, the claim made in the advertisement quoted from that every single order for 6, 8, 10, 12 or 15 gallons of paint is made up especially after the order is received is too ridiculous to receive even passing notice. But to the thousands and tens of thousands of consumers who read it the claim may and very likely does seem plausible. The intent and purpose of this article is to direct the attention of retail dealers to the fact and request them to use the information given in such manner as will educate and convince all of the paint consumers in their respective localities that they will not get what they are led to believe is to be supplied to them when they purchase catalogue house paint. It is made to sell. Whether it wears well and gives the purchaser full value for the money paid is a matter of indifference to the people who sell it.

TO THE VARNISH BUYER

the most serious considerations are quality, reliability and uniformity, and these qualifications are of special importance to the dealer who is trying to build up a permanent varnish trade.

Berry Brothers' label or brand may be safely relied upon as ensuring the above conditions.

Our varnishes are the safest goods to handle and the surest and most reliable goods to use.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

The United Empire Bank will open a branch in Hamilton.

The Bank of Hamilton is opening a branch at Salmon Arm, B.C.

The Wade Mfg. Co., Dundas, have commenced the manufacture of gold and silver plated novelties.

The False Creek Lumber Co., of Vancouver, will build a new saw mill near the city at a cost of $15,000.

The Anacortes Lumber & Box Co. have sold their box factory at Victoria, B.C., to Swifts, the Chicago pork packers.

A large addition will be made to the Waterous Engine Works factory at Brantford by about 4,000 square feet area.

Thomas Ogilvie & Sons will erect a large warehouse at Bay and Wellington streets, Toronto. The site is 60 x 118 feet.

Work has been begun on the construction of the Clergue Railway, the Manitoulin & North Shore, on Goat Island.

The Milton Pressed Brick & Sewer Pipe Co. have by letters patent increased their capital stock from $50,000 to $250,000.

Thomas A. Edison has stated that the perfection of his storage battery will mean that it can be applied to harvesting machinery.

Jas. Ross has resigned as president of the Mexican Light, Heat & Power Co., and Sir Geo. Drummond has been elected president.

The Philip Carey Co., of Lockland, O., are negotiating with Brantford with a view to establishing there. They manufacture felt roofing, etc.

Crozier & Elliott, representing the Adjustable Boiler Flue Co., are negotiating with Portage la Prairie with a view to establishing a factory in that place.

The Dominion Carriage Co., which will be a Canadian branch of a large American concern, purposes building a plant at Toronto Junction, which will employ 150 men.

The planing mill and residence of Mustard Bros., at Websterville, Ont., were burned to the ground together with a large quantity of lumber. The loss is estimated at $12,000 with insurance of $6,000.

The Canadian Manufacturers' Association are considering the advisability of establishing an office in London, England, for the purpose of supplying Canadian manufacturers with a sufficiency of skilled labor.

R. I. Henderson, formerly secretary of the Henderson Roller Bearing Co., was placed under arrest on the charge of stealing $1,300 from H. Pepper, Hanover. It is alleged the money was given Henderson to purchase stock in the reorganized company, and that instead he retained the money.

The Dominion Portland Cement Co. have been incorporated under Dominion charter with a capital stock of $1,000,000 for the purpose of manufacturing cement and by-products. The provisional directors are Henry Dornville, J. H. Redpath, H. E. Borradaille, H. N. Chauvin and C. A. Duclos, with chief place of business at Montreal.

A company who will manufacture stoves, heaters, ranges, etc., has been organized in Owen Sound with a capital stock of $200,000. Allan J. Ross, hardwareman of Owen Sound, will be general manager, and W. S. Hampden, Toronto, superintendent of works. Different improvements and patents are held by the company, which it is said will materially reduce the amount of fuel used.

A petition was filed at Osgoode Hall by the Ontario Bank for the winding-up of the Capital Power Co., of Ottawa, which was incorporated in 1900 with a nominal stock of $300,000. In June last the petitioner got judgment against the company for $85,280.17, together with interest at 6 per cent. The claim is made that the affairs of the company are much involved and that it is not in a position to meet its liabilities.

The successful smelting of magnetic iron ores by the electric process at Sault Ste. Marie has attracted considerable attention elsewhere, and already inquiries for detailed information are being received by Dr. Haanel, the superintendent of mines, from all parts of the world. It is said that a well known Pittsburg company intends going into the electric smelting industry in Canada at some point where power can be obtained at minimum rates.

BUILDING NOTES.

The Baptists of Port Arthur will erect a new church.

Toronto will build a new fire station to cost $60,000.

Jacob Cohen will build a four-storey hotel in Toronto.

The Dominion Bank will build a branch at Deloraine.

Pat Burns & Co., Vancouver, will build a new abattoir.

Winnipeg will build four new fire halls in the suburbs.

L. L. Peltier, of Fort William, will build a business block there.

Ed. Patterson, Hamilton, has prepared plans for a new hotel there.

H. B. Dawson, of Port Arthur, will build a new business block.

The Royal Bank of Canada will build a branch at Weymouth, N.S.

The Wm. Davies Co., Toronto, will build stables to cost $20,000.

Molsons Bank have taken a permit for a $70.000 building in Toronto.

Regina has started to build her new city hall. It will cost $175,000.

The Toronto Board of Education ask tenders for enlarging two schools.

The National Drug & Chemical Co. will build a $25,000 warehouse in Toronto.

E. C. Horn, of New York, has the contract for a $70,000 vaudeville theatre in Ottawa.

The Sisters of St. Joseph will build an infants' home in Toronto to cost $46,000.

R. Bowman, Vancouver, will build a five-storey shipping warehouse to cost $30,000.

The Centennial Methodist congregation, Toronto, will build a $40,000 church.

McLean Brothers, contractors, of Vancouver, will build a saw mill on the Fraser River.

The Canadian Pacific Railway are about to add two new wings to the Place Viger Hotel, Montreal.

A permit has been asked for the building of the Royal Alexandra theatre, Toronto. It is to cost $120,000.

Kelly Bros. & Mitchell Co., Winnipeg, have the contract for the new Imperial Bank there at a cost of $150,000.

Winnipeg city clerk asks tenders for warehouse, transformer house and repair shop for city electrical department.

The historic Victoria Rink, Montreal, has changed owners, and it will be torn down to make room for a large musical hall.

The new Church of the Messiah, (Unitarian), which is being erected on the corner of Sherbrooke and Simpson streets, Montreal, will cost $68,000, according to the building permit, which has just been issued.

PROVED HIS CHARACTER.

An Irishman was charged with a petty offense.

"Have you anyone in court who will vouch for your good character?" queried the judge.

"Yes, sorr; there is the chief constable yonder," answered Pat.

The chief constble was amazed. "Why, your honor, I don't even know the man," he protested.

"Now, sorr," broke in Pat, "I have lived in the borough for nearly twenty years, and if the chief constable doesn't know me yet, isn't that a character for yez?"

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Kemp's Enamelware.

The new catalogue recently issued by the Kemp Manufacturing Co. is one that should be in the hands of every dealer in enamelware. The different utensils shown in it stand out strikingly in the actual colors of the enamel which clearly convey to the dealer's mind the class of goods he might expect when making his selection. Altogether, over one hundred and fifty cuts are shown. The Kemp Manufacturing Co. will be glad to mail a copy to dealers who have not yet received one.

Kennedy's New Catalogue.

The Kennedy Hardware Co's illustrated catalogue No. 2 has just been issued. It is mainly a sporting goods catalogue showing the newest in skates, guns, rifles, revolvers, ammunition, etc. Their line of gun and shell loading instruments is extensively shown as well as game traps and other seasonable sporting goods. Considerable space is also devoted to axes and crosscut saws. Those who have not yet received this catalogue may have one on application.

INQUIRY FOR BIRCH SEATS.

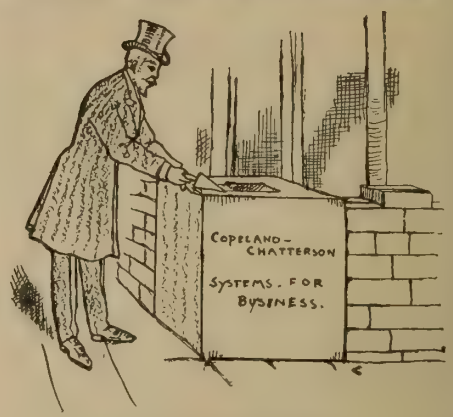
Hardware and Metal—Kindly let me know the names of makers of birch chair seats, used for repairing chairs.

W. Button, of 142 Wilton avenue, Toronto, and the Valley City Seating Co., Dundas, both manufacture birch seats.

FOR SALE.

New Rolling Mill for Sale at Winnipeg for Manufacturing Bar Iron and Steel.

ONLY mill west of Ontario. Wrought scrap iron is the raw material. Up to now all raw scrap iron had to find a market with Eastern mills on a freight of $6.50 ton, and bar iron is shipped west on a freight of $13 ton, $19.50 ton in favor of this mill. This mill can produce bar iron at a cost of $27 ton, which sells to the Retail hardware trade at $50 to $54 ton at Winnipeg.



Twenty tons per day will net you a profit of $138,000 per year, price $69,000, $5,000 cash and balance to be paid out of earnings in one or two years, 6 per cent. interest; $20.000 will be ample as a working capital. If preferred will lease mill for $7.50 ton on outpu ; have skilled superintendent and labor to operate mill on hand.

This is an excellent chance for the Western Retail Hardware Association to acquire this mill and manufacture their own bar iron, then they control the western iron trade, 300 members subscribing only $100 each will total $30,000, enough to get possession and leave $25,000 as working capital and pay for the mill out of the earnings.

All members of the association should take this up with their president or secretary at once, bearing in mind that the earnings will pay for the mill in less than one year, and that the cost of manufacturing bar iron will not exceed $27.00.

T. M. KIRKWOOD,
165 Lowther avenue, Toronto.
Late owner of the Belleville Iron and Steel Rolling Mills. (34)

Every Business a Good Business

USE THIS CORNER STONE WHEN BUILDING UP YOUR BUSINESS

¶ Every business is a good business — how good depends upon how ingeniously effective and economic are the general business and office methods employed. "Office methods" is a broad term which includes accounting in a retail store.

¶ It all means that you must not blame your business for your troubles if you refuse to adopt modern methods—if you refuse to instal the Copeland-Chatterson Systems for Business.

¶ The Copeland-Chatterson System of accounting in a retail store consists of one active book, which does the work of a number of books intelligently, and without any undue effort on the part of the accountant.

¶ This one book is labelled "Monthly Account System," and stands in practice for just exactly what the label says. It is the only active book the merchant requires. He knows through it, at the first of each month, just where he stands, and his customers know just what they owe him.

¶ It 's labor-saving condensed and refined too, for one writing charges the goods and makes out the invoice. On any day selected, therefore, the statements can be promptly sent out to customers. Then you have recapitulation Sheets, Ledger Sheets and Purchase Sheets all indexed.

BUSINESS CHANCES

$3,000 will buy a good hardware, plumbing and heating business in the prosperous city of Sherbrooke. Owner wishes to retire. Apply Box 107, Sherbrooke, Que. [tf]

HERE is what you want—a tinsmithing and plumbing business in sunny Alberta town, with 1,200 population; no opposition; $3,000 will handle business; lot and building 14x36; last year's business $8,000; act quick, good reason for selling. Address, S. Case, HARDWARE AND METAL, Winnipeg. [35]

WELL selected stock of hardware, stoves, tinware, tinshop tools, etc. In first-class section of Ontario. Good reasons for selling. Stock about $4,000. Apply Box 549, HARDWARE AND METAL, Toronto. [39]

SITUATIONS VACANT

WANTED—Four first-class tinners; must be sober and steady. Apply stating wages to Drawer 00, Edmonton, Alta. (33)

THREE first-class tinsmiths, with experience on furnaces, steady work, good wages for hustlers. Ralph, Morris & Ella, Ltd., Vancouver, B.C. [34]

HARDWARE salesman wanted, one who thoroughly understands hardware, must be good stock keeper and window dresser, state age, experience and salary required. Box 548, HARDWARE AND METAL Toronto. [34]

WANTED—Hardware salesman with about four years' experience. Write at once with references. Good position for the right man. Apply to The Bond Hardware Co., Limited, Guelph, Ont. [34]

WANTED—Capable young man with fair knowledge of mechanics and good appearance as city traveller in Winnipeg. Good position for right man. Box 57, HARDWARE AND METAL, Winnipeg. [35]

WANTED tinsmith with knowledge of furnace work; single man preferred; will pay good wages; steady position to right man. Box 552, HARDWARE AND METAL, TORONTO. [34]

SITUATIONS WANTED

WANTED—Position as salesman or Traveller in hardware lines, carriage goods or paints (manufacturing or general wholesale). Age now 47; thirty years experience as traveller, retailing and jobbing, have travelled all over Canada; good references. Apply to HARDWARE AND METAL. [37]

WANTED position in west by retail hardwareman; eight year's experience; general and builders' hardware, stoves, etc.; understands ad. writing and window dressing; can give best reference. Address 544, HARDWARE AND METAL, Winnipeg. [36]

TRAVELER WANTED.

GOOD position open for party of exceptional ability to sell a complete line of up-to-date stoves and furnaces in Manitoba and Northwest, a line well known. Excellent opportunity One with furnace experience preferred. Address in confidence Box 550, HARDWARE AND METAL, Winnipeg.

See That Plate?

ISN'T IT A BEAUTY?

PLUMBING AND STEAMFITTING

OTTAWA'S ASSOCIATION.

Editor Hardware and Metal,—In reply to your correspondent re National convention held at Ottawa lately, I would like to draw his attention to some facts which have evidently escaped his memory, or of which he is not fully aware of. When he tries to bring out in bold relief the superior moral fibre of the entertaining committee as against the timid, frightened, swoonful absentees who were near it, but not in it. No one in the trade in Ottawa disputes the fact that your correspondent has done good work in the way of trade organization, but he is wrong in trying to put the cause of the present disorganized state of the Ottawa association to timidity and fear.

It is an old story and need not now be recalled here in all its details. But the association in Ottawa was given its most serious setback, not through a malevolent press so much as by the specific action of its prominent members in opposing and in doing everything he could to counteract the influence of the association and its secretary before the board of health of the city in its efforts to influence the board in improving the by-law and eliminating abuses, which then obtained.

At that time I was of the opinion and am so still, that united co-operative action of the association with the plumbing inspector in seeking to improve the by-law, making it more stringent in its provisions and less vague in its wording, would have been better policy; and one that will yet have to be adopted before the Ottawa by-law can be much more improved, despite the best efforts of Inspector O'Connel at the present time.

It is a common saying in Ottawa that there is no law framed or carried into effect by council, but that a carriage and pair can be easily driven through it, and this is particularly so in the plumbing ordinance.

However much the association was at fault at that time the fact remains that the unwise action of one of its previous strong supporters and promoters of the action of the association, in writing letters to the board of health seeking to discredit the association and its delegates, was one of the chief causes of the abandonment of association. Naturally enough, discouragement followed the ultimate result of the board's action, which was to throw out the association's resolutions, and made the association appear ridiculous before the community.

The results have been disastrous to the trade of Ottawa. At the present time plumbing is being done, as Dooley puts it, for the glory of it. Assignments have been frequent and the end is not yet, as present conditions cannot hold long. I know men who employ one or two men and work the tools themselves, who complain that they cannot compete with large shops in prominent stands in the city, whose working and general expenses must be great; and yet these men with practically no working expenses, cheap rents, no shop expenses at all and who can buy almost as cheaply, cannot get what they consider a fair price for their labor. I have in mind one job at the present moment where one hundred and six dollars was tendered and accepted for a house with four good fixtures, with hot and cold supply. The job was worth one hundred and thirty-five dollars and was my figure for same. Numerous other instances could be given showing that this condition prevails very largely all over the city. That lack of organization is making itself felt here as elsewhere is evident and the public contractors are reaping the benefit of the capital and brains of the trade.

Has the time not come when all this should cease. That by-gones be by-gones and that the trade should get together again and try to infuse new life and hope in the plumbing trade of the city. No good will come out of the present apathy of the master plumbers.

The direct and indirect results of the National Association of Plumbers is admitted. It has done much to improve the status of the plumbers and has done much to eliminate the jobber from the field of competition amongst our customers and large contractors as is presently done in the hardware trade. Its influence is bound to become greater for the improvement and betterment of the trade as a whole in proportion to the practical and moral support of every master plumber to-day.

Undoubtedly the trade got a severe blow, arising out of the practices of a few men in Toronto under the name and auspices of the association, but neither you nor I were guilty of such. Then why should we hide our head in shame and allow the callumny to rest on the trade as a whole as though all were guilty? In no business or profession in the Dominion will you find a more honest, ambitious, enterprising class of men doing business than the master plumbers. The very nature of the profession goes to form honesty in the character, for the plumber who deliberately puts in poor material and poor work in jobs is simply distributing boomerangs for himself, and the result is that sooner or later he is forced out of the business. Yet there is no profession demanding as much knowledge, both practical and theoretical, combined with a knowledge of business and is so poorly paid as the plumber. Lawyers and doctors have their strong combination, also members of parliament, and few of them are doing more for the cause of health and the moral uplifting of the unappreciative public as are the plumbers. Such a state of affairs ought not to be allowed to exist. Let the plumbers combine and associate together for their just and equitable share of the profit they ought to get for their labor and the benefit of their knowledge and experience.

In a National Association of Master Plumbers a plumber can demand the recognitions and honors which is his due; acting independently his status will remain as before. Collectively he will in time become recognized as one of the most advanced, intelligent, scientific workers of the present day.

SUBSCRIBER.

Ottawa, Aug. 20, 1906.

WATER CURTAIN FIRE PROTECTION.

An instructive and valuable test of a new system to protect buildings from flames in adjacent structures was recently made in New York, according to the American Inventor. The principal feature of the demonstration was the almost perfect protection afforded a sky-scraper building from catching fire from the flames of near-by buildings in congested districts of narrow streets.

The experiment was made at the eighteenth story of the Manhattan Life Insurance Co. Building, 64 to 70 Broadway, New York. The insurance company recently added to its standpipe fire plant what is known as the Regan water curtain, which has been patented by former Chief Regan, of the Boston fire department.

On the eighth floor and on the fifteenth floor, on the Broadway side of the Manhattan Life Building, 3½-inch pipes were connected with the city water system in the street. The nozzles of the pipes were split into three tiny slots, so that the stream spread into fine spray. This system of pipes stretched across the front wall of the building, made a canopy of water, covered the front of the building and ran off in great streams for a block up and down the curb of Broadway.

The plan is to turn on this system should there be a fire across the street, and thus obviate any danger from heat or from a leap of flames across to the Manhattan Life.

A second canopy was turned on at the south side of the building, next to the non-fireproof Consolidated Exchange. A third system protected the rear, which touches on the New York Stock Exchange New street side. There are standpipes on the north side of the Manhattan Life.

The only criticism made by the fire insurance men was that the force pump in the building, with its capacity of 500 gallons a minute, could not get water enough out of the Broadway main to make a sufficiently heavy canopy. In case of fire, when engines by the score would be tapping the main, it was feared the canopy system might fail, but it was shown that artesian wells in the cellar of the Manhattan Life could be used to increase the supply. The fire insurance experts said that if there were pressure enough the idea was an excellent one. Its cost was less than $1,000.

SOLDERING PASTE.

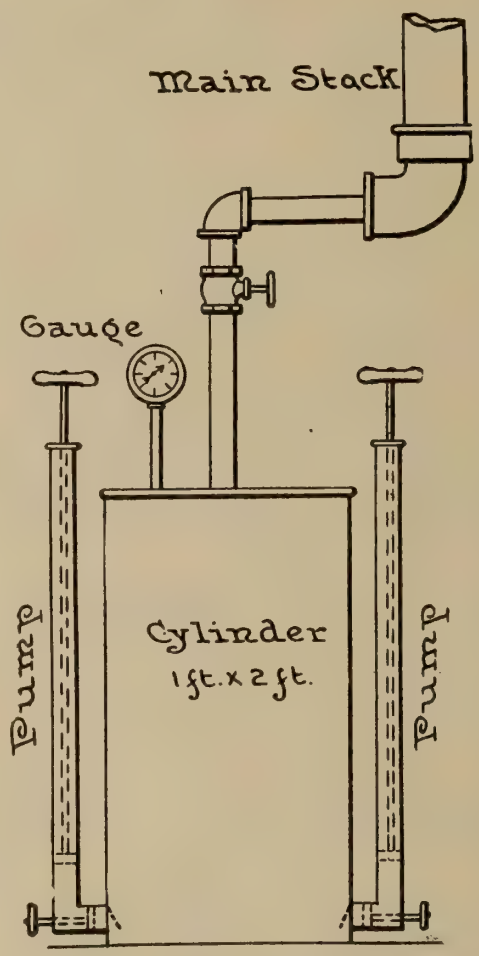
Soldering paste, says the Brass World, has now come into extensive use in electrical work as a flux for soldering. This has been brought about by the requirements of the electrical trade that in certain forms of soldering no acid shall be used. For soldering copper wires for electrical conductors, solder-paste is almost exclusively used. It has also entered other fields of soldering, particularly in instances were spattering and corrosion are objectionable.

Soldering paste which is now used in the electrical trades consists of a mixture of a grease and chloride of zinc. The grease which is commonly used is a petroleum residue, such as vaseline or petrolatum. Such a material is about right in consistency. The proportions which are used are as follows:

Petrolatum, 1 lb.

Saturated solution chloride of zinc, 1 oz. (fluid).

The use of petrolatum instead of vaseline is recommended. While they are identical in composition, the name "vaseline" is registered as a trademark and commands a higher price on this account. Petrolatum is much cheaper.



The chloride of zinc solution is made by dissolving as much zinc in strong muriatic acid as it will take up. An excess of zinc should be present and all the acid neutralized. This will form a thick, oily solution. The petrolatum and chloride of zinc are mixed and thoroughly incorporated by means of a mortar and pestle or by vigorous stirring.

The advantage of this soldering paste lies in the fact that it does not spatter and is not corrosive. It will be found excellent and is now extensively used.

APPLICATION OF THE AIR TEST.

One of the most equable tests that may be applied to plumbing work in new buildings is the air test, writes John J. Sullivan in the Plumbers' Trade Journal. By this method every portion of the work is subjected to the same pressure, whereas under a water test one portion of the work may be under fifty pounds pressure, while another portion is subjected to only five pounds, according to the height of the building.

The application of the air test to plumbing work is about the same as that applied in the testing of gas pipes, except that a larger air pump is used and usually a pressure gauge in lieu of the column of mercury. After all the openings are closed, the pump is started, and the lines filled with air. The pressure gauge in the pump or cylinder shows the amount of pressure. Large leaks may be discovered by the hissing sound produced by the escaping air, while smaller leaks may be found by the application of soap suds over the suspected spot. Any escape of air will immediately produce an

Pump for Air Testing.

air bubble. As a further aid to the detection of leaks, ether may be injected into the lines, the pungent odor being clearly discernable. Many sanitary engineers require that the system withstand a pressure of ten pounds, which is quite severe. In the opinion of the writer, a five-pound pressure is ample, for it is difficult to conceive under what circumstances the system would be subjected to a more severe strain under actual working conditions.

Fig. 1 shows a pump, or rather two pumps, that may be used with good results. The pumps are similar to large bicycle pumps. They are attached to the sides of a large metal cylinder and are operated by two persons. The air is pumped into the cylinder and from thence it flows into the lines. The pressure gauge is placed on top of the cylinder, and there are hand closing valves at the bottom of each pump. The writer has not sufficient data at hand to determined the relative cost to the plumber between his test and a water test. The cost of the air test being determined by the quality and nature of the material used and the amount of pressure required, a system of screwed pipe and fittings properly connected should easily stand a five-pound pressure Cast iron pipe with lead caulked joints is more liable to show leaks on account of sand holes and imperfect caulking.

PLUMBING CATACHISM.

A book entitled "Plumbing Catechism" or "Theory and Practice of Plumbing Design," which has just been published by Domestic Engineering, covers a field which had not hitherto been touched, and should, in consequence, prove itself popular.

The authors are Chas. B Ball, for many years connected with the plumbing inspection department of the district of Columbia, later chief sanitary inspector tenant department of New York and still later chief sanitary inspector of Chicago; and H. T. Sheriff, for many years editor of Domestic Engineering.

The basic principles of plumbing design and practice are given in such a way as to crystallize the knowledge of the skilled plumber and provide to the non-technical reader a source of information on this subject as free as possible from the puzzling set phrases of the craft.

The method adopted is that of question and answer, it being considered that this has manifest advantages, especially for those who have occasion to examine plumbers as to their competency.

The cost of this book is $1.00 per copy post paid, and it may be ordered from the Technical Book Department, MacLean Publishing Co., Montreal, Toronto and Winnipeg.

TO MAKE METERS.

Walter G. Rumpel, of Guelph, has completed arrangements to manufacture all kinds of meters. Mr. Rumpel has recently returned from Europe with the newest ideas in this line.

PLUMBING PARAGRAPHS.

Granby, Que., ratepayers carried a by-law to borrow $100,000 to install a waterworks system.

The Canadian General Electric Co. will be awarded the contract for a 30 kilowat generator for Fredericton, N.B., at a cost of $1,300.

George Browne, representing Caverhill, Learmont & Co. in the Eastern Townships, was a sojourner at Old Orchard Beach last week.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 24, 1906.

A phenomenal business is being done by the leading manufacturers and jobbers in radiators, and, in fact, all kinds of supplies for steam and hot water heating. A good many of the large buildings which have been under construction during the Spring and Summer are rapidly nearing completion and estimates on the heating installation are being considered. It is said by prominent members of trade that the present season bids fair to beat all records, in this branch of the business A peculiar feature is the dearth of small jobs, nearly all inquiries being for large quantities.

The general trend of the market is shown by the change made this week in quotations on copper range boilers, which are now enjoying a very large demand. Prices on 30 gallon boilers have been advanced to $25, on 35 gallon to $29.50, and on 40 gallon to $32.

All other lines are in active inquiry with quotations firmly held.

RANGE BOILERS—We note, this week, a decided advance in the price of copper boilers. Prices now are: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list. Copper, 30 gallon, $25; 35 gallon, $29.50; 40 gallon, $32 net.

LEAD PIPE—Quotations are firmly held and as prices in the primary market are advancing they will probably be steady for some time to come. We still quote: 15 per cent., f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b., London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—No change is reported in trade conditions. We give discounts on all sizes of nipples up to 6 inch, 67 1-2 to 70 per cent.

IRON PIPE—Sales continue to be of large volume. We give prices generally quoted as follows: Standard pipe in lots of 100 ft., regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27; 2 inches, $36.50; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS — We are still quoting the following prices: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—No changes in price have occurred since our last report and we still quote: Bar solder, half-and-half guaranteed, 24c.; No. 2, wiping solder, 21c.

ENAMELWARE—The present demand is very heavy and is keeping manufacturers busy. We give prices as follows: Canadian bath tubs, plate E1, quote: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.50, special $17.15; plate E35, 5 feet, 1st quantity, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.: special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, Aug. 24, 1896

While there are no changes in price this week the general tendency in those commodities that have been subject to movement, is firmer. Solder is quoted at from 26 to 27 cents for half-and-half, and 24 and 25 cents for wiping.

There is no cessation of business among the plumbing jobbers, everyone reporting being filled up with orders. Great difficulties are experienced in getting supplies from the manufacturers, who in many lines are working night and day.

Several large houses are preparing for the Exhibition and expect to meet a lot of their outside customers. A great number of travelers will be off the road during that time.

LEAD PIPE—Prices are very firm owing to advance in lead, but so far are without change. We quote as follows: Lead pipe, 8c., discount 15 per cent.

SOIL PIPE AND FITTINGS—Quotations continue as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—The usual business is being done, with some price cutting. We quote: Black, 1 in. pipe $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS — We quote as follows: Cast iron elbows, tees, crosses, etc., 67 1-2 per cent.; cast iron plugs and bushings, 67 1-2 per cent.; flange unions, 65 per cent.; nipples, 75 and 5 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 and 10 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 65 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 1-2 per cent.; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallon, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—Business in radiators shows a heavy increase, so much so that it is difficult to fill orders. We quote: Hot water, 50 and 2½ per cent.; steam, 50 and 5 per cent.; wall radiators, 50 per cent.

SOLDER—The prices are still very firm, but without change. We quote: Bar solder, half-and-half, guaranteed, 26c.; \ 24c.

ENAMELWARE — Manufacturers are keeping well up in their shipments, although some lines are short. The demand for enamel goods is at its greatest and prices keep very firm. We still quote: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $14.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.90. Fittings extra.

QUESTIONS RE SEPTIC TANKS.

In Hardware and Metal of Aug. 11 we noticed an article on waste disposal for country houses by A. S. Atkinson. His article is a timely one.

We would like to have a few points explained, however, and would ask first, how large should the tank be built for a good large country house; second, how far from the house should it be placed; third, should it have a ventilating pipe off the top; fourth, should manhole cover on top of tank be airtight; fifth, how large should pipe be that emptys sewage into tank; sixth, how large should the overflow be; seventh, how often should it be necessary to empty tank; eight, give the dimensions of tank for ordinary farm house; ninth, where are the valves used in this sys-

tem to be procured.—W. H. Turnbull & Son, Brantford.

Answers to questions one to eight will be found in an article by M. J. Quinn in the issue of Hardware and Metal of July 28 last. Answering question nine, the valves for septic tanks may be bought from the Dominion Flushing Valve Manufacturing Co., 461 Dovercourt Road, Toronto.—Editor.

THE WINNIPEG PLUMBERS.

The master plumbers of Winnipeg will prosecute members of the plumbers' union on a charge of besetting. It is alleged they watched the incoming trains with a view to prevent plumbers who came in taking positions with the masters, which is an indictable offence under the criminal code.

HOME FROM ST. LOUIS.

W. L. Clucas, of the firm of W. H. Clucas & Co., plumbers, etc., St. Louis, Mo., has been spending a few days vacation with his family at the residence of his father, 26 Homewood avenue, Toronto. Mr. Clucas has from 25 men upwards in his employ and reports business in St. Louis exceptionally good since the close of the exhibition.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

999. Clay roofing tile—A correspondent in the North England has asked for the addresses of brick and tile firms in Canada likely to take up the manufacture of a new clay roofing tile. Is also looking into the question of manufacturing on the spot if suitable clay lands are available and good market assured.

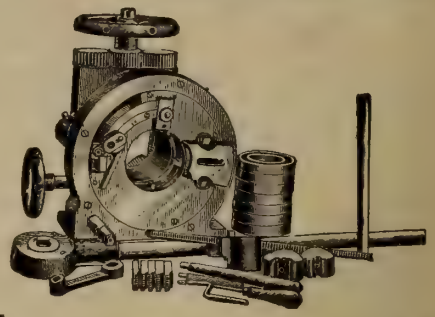
1005. Stoves, etc.—A Midlands firm manufacturing stoves, grates and fenders of decorative styles and in various metals, would like to get into touch with Canadian importers.

1011. Scrap iron and steel—A firm in the city of Mexico desire to form connection in Canada with consumers of scrap iron and steel.

1016. Roofing felts—A Manchester firm ask for prices of tarred roofing felt, in rolls 25 yds. by 32 in. and 15 yds. by 36 inches, from Canadian manufacturers.

1018. Iron rivets—A Manchester firm will be glad to get prices of iron and copper rivets from Canadian manufacturers.

1020. Machine tools—A Manchester firm wish to extend its trade, and will welcome correspondence from Canadian buyers of machine tools.



1022. Raw hides — A Lancashire firm ask prices of raw hides from Canadian shippers.

1026. Wire cloth—A Lancashire manufacturer of woven wire cloth for flour mills, in all sized meshes, wish to correspond with Canadian mills requiring same.

1032. Locks—An English firm manufacturing all kinds of locks, lever, railway, brass and iron padlocks, etc., is desirous of being suitably represented in Canada.

1036. Cooking utensils— A London firm desires the addresses of Canadian manufacturers of aluminium cooking utensils.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

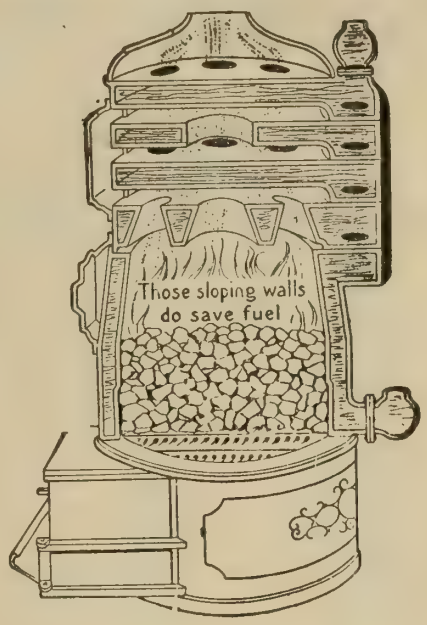
That's the whole story....It heats the house for less money.....

The Oxford Boiler is the househeating boiler you personally, can best afford to push, simply because it does heat any indoors for less—use less fuel to heat any indoors.

We don't want you to do a thing with the Oxford unless we can prove that to you, and prove it in a way that will make you just as certain about it as every Oxford Boiler user already is.



You've got to believe that truth before you can preach it ; and we've got to show you why it is a truth before you can believe it.

If you will say you want to hear it, we will make it plain that the Oxford Boiler actually will get more out of fuel than any boiler you know, just because of its in-sloped fire-pot walls, its double-depth first section, its hollow triangular grate bars, its remarkable draft method, and the other Oxford fuel-saving, heat-bettering selling points.

Every one of them is peculiar to the Oxford Boiler.

Any one of them makes it easier—and **SAFER**—to push this boiler, for your own profit.

Do you want to be shown ?

Visit the Exposition and visit us, too:.

You will be most welcome at our exhibit in the STOVE BUILDING at the Exposition, where we shall make a notable display. You are specially invited, also, to inspect either of our mammoth factory plants at 500 King Street West and at Toronto Junction. Come and be interested.

Brass Goods Can't be Better Than United Brass Goods Are

¶ The plumbing job for which **UNITED BRASS GOODS** are not good enough has never yet been planned.

¶ No matter how high the standard is set in the specifications, or how severe the conditions of service may be, **UNITED BRASS GOODS** will never disappoint.

¶ ***Every piece of United Brass Goods is specially designed for the service it is to perform and the simple and practical construction attained after years of study and experiment, insures the maximum of strength and durability without sacrificing shapeliness and beauty,***

¶ **UNITED BRASS GOODS** are made as good as their makers know how to make them. If there was a better way possible the **UNITED** goods would be made that way.

UNITED BRASS MFG. CO.
CLEVELAND, OHIO, U.S.A.

Hardware and Plumber—

We have pumps suitable to any demand made upon you by most exacting customers.

Our pumps will do anything that a pump can do, and we will be pleased to give the benefit of many years' experience to any one having pump troubles.

McDougall Pumps are Standard Pumps, and with us it is quality first, last and always, while we ask just as little money as we can get along with.

We have a few catalogues for distribution

The R. McDougall Co., Limited

CALT, - CANADA

FIRST AND ALWAYS FIRST

There can **only be one first** although there may be lots of claimants and those who would be mighty glad to get a "tie."

IMPROVED

Daisy Hot Water Boilers

have been accorded first place by a discerning public. There are more "Daisy" Boilers sold than any other boiler. There are fewer "Daisy" Boilers being repaired than any other boiler.

The "Daisy" is the "no-complaint" boiler. People who take "others" in preference to the "Daisy" are people who buy without reason. They are anxious to invest their cash in coal—have money to burn.

An ounce of "Daisy" is worth a pound of all other boilers. Sell the "Daisy" and success awaits you.

Large stock of Iron Pipe, Cast and Malleable Fittings, Brass Goods, everything to complete a Heating System.

CURRENT MARKET QUOTATIONS.

Aug. 24, 1906

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

STAY-ON Horse Blankets

"Imperial Crown" Brand

The difficulty with most Horse Blankets is that no matter how you attach them to the horse, they will work off In the special make of our **STAY-ON BLANKETS** this difficulty is overcome. We have spent labor and money to perfect all kinds of horse clothing, and we are pleased to demonstrate to all the advantages derived from the use of our specialties. You pay no more for our goods than you do for inferior qualities.

ABOUT "C" HORSE NAILS

We ask your consideration of the following reasons for our making the claim that the "**C**" brand horse nails made by our company since 1865 is the best for you to buy.

FIRST—The material of which they are made. It is the best obtainable—Swedish charcoal steel nail rods—made especially for our work, and imported direct by us from Sweden. We unhesitatingly affirm that **no better material is used by any manufacturer of horse nails in the world for this purpose.**

SECOND—The process of manufacture. We forge the nails to the desired pattern from the nail rods while they are hot, and therefore in a malleable condition. Our process thoroughly hammers and consolidates the nail, making it tough and enduring; no other method will do this as satisfactorily. Our methods for polishing, rolling, pointing and finishing the nails differ from those used elsewhere in Canada, and, we are satisfied, with much better results.

THIRD—When the nails are finished they are subject to a final careful examination and sorting by hand, so as to prevent a single imperfect nail being found in a box bearing our "**C**" brand.

FOURTH—We guarantee to every purchaser that each box of horse nails bearing our name and trade mark (the letter "**C**") is perfect and ready for immediate use. They may be returned at our expense if found otherwise.

Any dealer who wishes to retain the farrier trade, can only do so by selling the best horse nails. The "**C**" brand will be found the best. They have been the standard nails of Canada, and thoroughly tested by thousands of farriers from the Atlantic to the Pacific for the past forty years.

We ask you to favor us with your orders through any wholesale hardware merchant; be particular and specify for the "**C**" brand made by us.

Discount—40, 10 and 7½ from our standard list, less 2% cash.

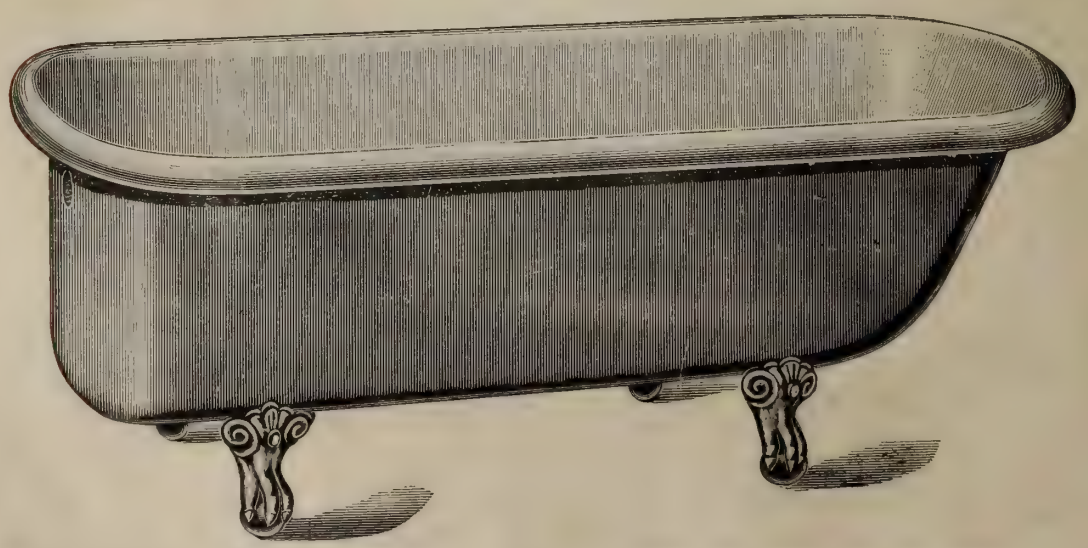
THE ENTERPRISE FOUNDRY CO., MANUFACTURERS Sackville, N.B.

The Amherst Foundry Company, Limited

MANUFACTURERS OF

Porcelain Enameled Baths, Lavatories, Sinks, etc., etc.

Below we give some of the reasons why you should use the "Beaver" brand of enameled goods:



1st. Because they are "Made in Canada."

2nd. Because the greatest care is used in the selection of the iron from which the castings are made.

3rd. Because the ingredients of which the enamel is made are all selected by us on account of their absolute purity and high quality without regard to price.

4th. Because all the work on these goods, from mouldings to enameling, is done by skilled workmen, many of whom are experts in their line of work.

Be sure and get the "Beaver" brand and you will not be disappointed.

We also manufacture Stoves, Ranges, and the celebrated "Improved Cumberland Hot Air Furnaces."

a.o.w.

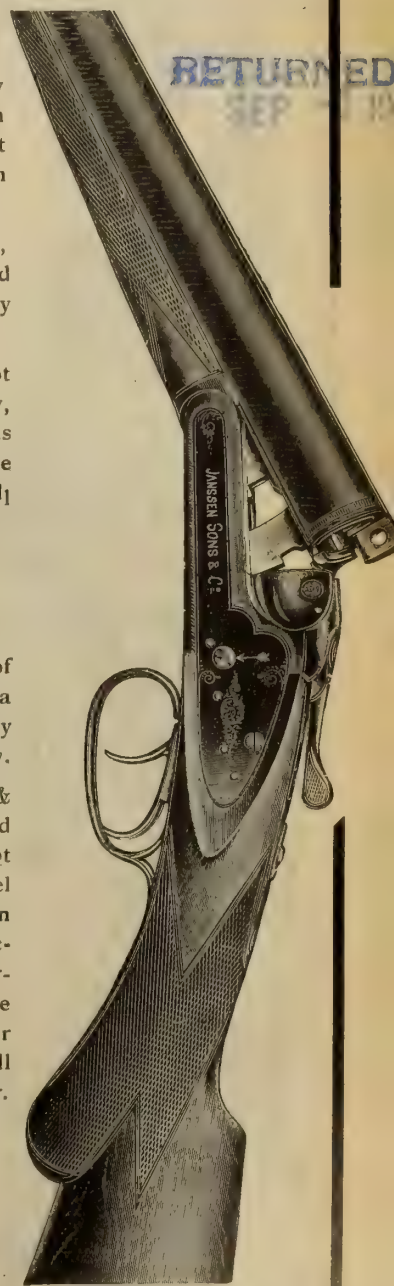
No. 1083. X. L. Shot Gun. The Most Compact Shot Gun Made.

No. 905.
24 Gauge, 26-in. Barrels. Weight about 4 lbs.

With the fine fall days, sportsmen all over the country begin to wake up. The cool bracing air seems to give them new life and brings back memories of pleasant days spent hunting way back in the woods, far from the smoke and din of the great cities.

Then comes the bustle of preparation, they want guns, rifles, fishing rods and tackle, or some of the thousand and one things necessary to their comfort and safety for any kind of a lengthy sojourn in the woods.

Are you prepared to fit them out with say a good shot gun? One that a man doesn't have to be a millionare to buy, but at the same time, one that will answer the purpose just as well, also be satisfactory to yourself, from the fact that once sold, it stays sold and leaves you profit enough that you will remember the transaction for many seasons to come.



We have Such Guns in Stock

Our new Sporting Goods Catalogue shows 100 pages of **money-making goods**. If you have not already received a copy, send for one at once. We carry the largest stock of any house in Canada and can fill any reasonable orders promptly.

H. & R., Stevens, Iver Johnson, Remington and H. & A. Single Guns, Browning Automatic Guns, Winchester and Marlin Repeating Shot Guns, X L. Single and Double Shot Guns, using 44 X.L. Shot Cartridges, Janssen's Double Barrel Breech Loading Guns (known to be the best value Belgian guns sold in Canada. If you buy this make, your expense account for repairs will be small indeed.) Stevens and Remington Double Action Breech Loading Guns, Winchester, Savage and Marlin Rifles, all models and calibres are included in our stock, and the prices we can make on any of these lines will make it worth your while giving us a trial on your next order.

No harm done to ask our prices anyway.

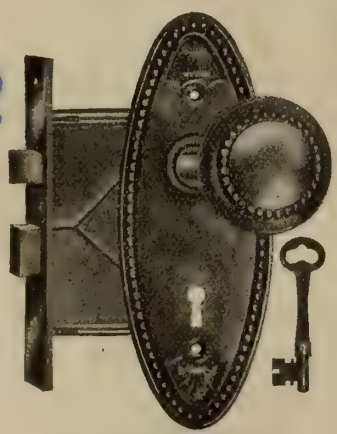
F.&W.

There is something very pleasing about the design of the "Crown" locks.

The rope of beads forms a sort of frame for the smooth mirror-like surface within, and the crown at the top and the simple ornament at the bottom take away the plainness and severity which otherwise would be felt.



In construction the locks have points as favorable as the design. The entire lock is of wrought steel and unbreakable. The bolts work freely and smoothly.

Are not these features you desire in stock of locks?

We have the "Crown" design in steel, bronze plated, and in wrought bronze, each in two finishes.

Ask our travellers to show you our full line of locks.

"CROWN" DESIGN

One square yard in a show case will contain a large enough line of pocket cutlery for the ordinary store.

And no other square yard in the store can be stocked with more profitable goods.

You probably sell a pocket knife on the average every hour.

How much do you make on cutlery? From 50 to 100%, or probably $2.00 to $3.00 per day off that square yard.

Don't you wish you had 100 other square yards equally profitable?

We have 450 different numbers of pocket cutlery in our stock. If you have poor selling lines drop them. Make your square yard more profitable. Our travellers will show you samples.

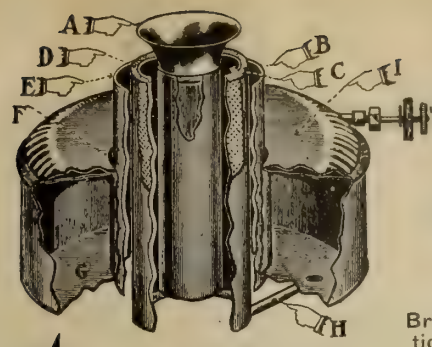
Mop is wrung by springs

Dana Peerless

This is the freezer that sells.

Write for Dana Food Chopper catalog.

Both feet rest firmly on the floor—no danger of upsetting bucket and wetting feet. *Pressure* that *wrings* mop is from a *spring*, *not* from the foot. Two springs, one on either side are independent of each other, pressure adjusts itself to any unevenness of mop—wrings all of mop thoroughly.



Bucket is strong and extra braced. Rollers are solid maple and *never* stick. Attractively labeled—make good display in your store—sure to please customers.

Ask your jobber. **THE DANA MFG. CO., Cincinnati.**

Prepare for magazine advertising.

10 Warren Street, N. Y.

THE ALUMINUM OIL HEATER

Sales Over the Million Mark

Bristles with selling points: no odor, no smoke, no perforations to clog up, no danger. Explosions impossible. Radiates heat like a base burner, from the sides and bottom as well as the top. Wick taken out and replaced in a minute. Easy to operate, convenient to handle, handsome in appearance. Sells at sight and stays sold—never comes back for repairs.

The only Oil Heater equipped with ***Safety Burner***—and the burner is the very soul of an Oil Heater.

If you buy any other you'll be sorry.

We guarantee every Aluminum Oil Heater. Money returned if not satisfactory.

The demand for Aluminum Oil Heaters this year is double that of last year. Why? Because of unusul satisfaction. Be on the safe side—let the other fellow have the trouble.

"During the past ten years we have sold over 50,000 Aluminum Oil Heaters, and your records will show that we have never returned one for repairs or otherwise."—Butler & Johnson, Jobbers and Retailers, Syracuse, N.Y.

We're making the prices that bring the everlasting smile. A postal will bring full information by return mail.

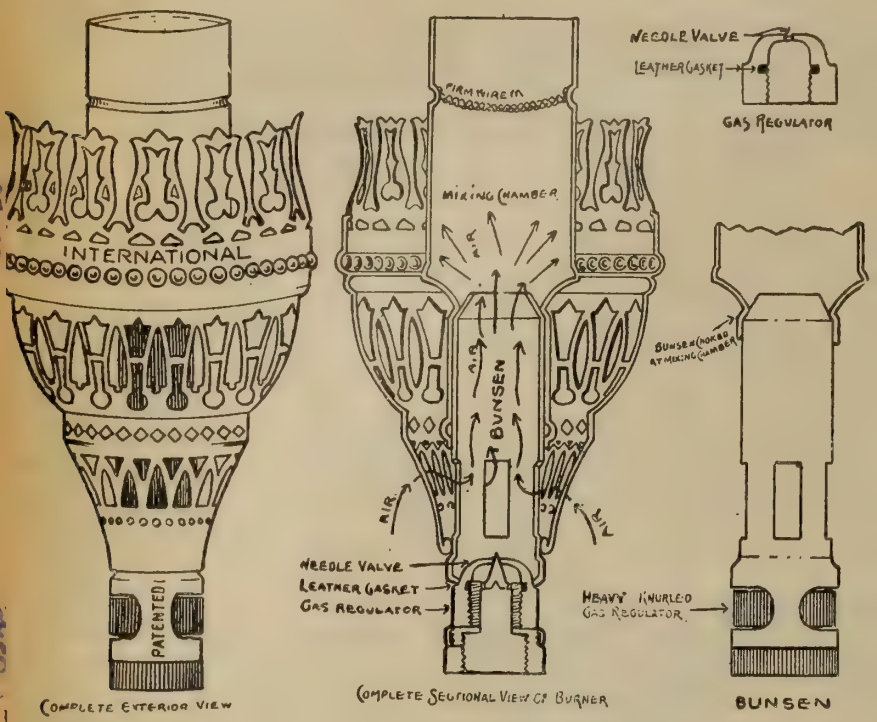
Arnesen's Animal Trap

Patented in U.S. and Canada

Specifications—"A" is entrance and platform on which animal walks to reach feed box. "B" is the trip which the animal must step on to reach the feed box, when the animal steps on this trip it unlocks platform and allows it to drop down as indicated by dotted lines thereby throwing animal into trap, when the platform is empty it springs back into place again. "C" is spring which works the trip. "D" is the feed box which is filled from the outside. "E" is cover to feed box. "F" is door to let the animals out after being caught.



This was patented in Canada, May 15, 1906. The Canada patent is for sale. Address all communications regarding same to

THE FRANCIS-FROST Co. LIMITED
223 QUEEN ST. EAST
TORONTO, - - - CANADA

"More Than Good Enough."

Dealer from the West went through our plant the other day. Stood and watched them putting together Oxford Chancellor Range bodies.

Walked over and examined the heavy cold-rolled steel that makes the Oxford Chancellor bodies. Had a look at the asbestos millboard that interlines the whole range. Counted the rivets they were putting in to hold one to the other.

Then he took a foot-rule and measured the great big Oxford Chancellor oven. Used the same foot-rule to find out that oven top, back and bottom are all the same thickness.

"Well," said the dealer, "you people certainly must think that more than good enough isn't quite good enough!"

If we didn't think so we'd stop work when we'd sold it to you. As it is we stay with it after you've got it,—stay with it until you've sold it and ordered more,—and then we keep right on pushing it for you.

That's why the dealer who once stocks the Oxford Chancellor never quits it."

If you are in Toronto during the great Exhibition, you'll find a welcome at our exhibit in the Process Building. You'll find one, too, at either of our huge factories,—500 King West, or Toronto Junction.

INDUSTRIAL EXHIBITION AT ITS BEST

Toronto's Industrial Exhibition is on again, and nothing is truer than that it is better and bigger than ever. The dominant features of the fair this year are the Second Life Guards Band, the King's horses and the new Process Building. The most lasting impression for the average visitor at least will be the new Process Building. It is at the turn in the roadway leading from the main entrance and its size will be a surprise to every visitor. It is this shape

with an imposing dome over the centre (A). The north wing is given over to stove exhibits, the middle one to agricultural implements and wagons, and only the third wing houses processes of manufacture, but there are more of them than ever before. Among carpet weaving, boot and shoe making, thread making, envelope making, silver plating, typesetting, and other processes, the food stuff industry has not been neglected. Weston, the baker, has an oven there and a house made of loaves, roof and all, and across the aisle the process of making shredded wheat biscuits is demonstrated. It is the intention of the management to increase these processes of manufacture from year to year, and ultimately to fill this great building with this most interesting and instructive class of exhibits.

Ready, Aye, Ready.

Never before since the exhibition assumed something of its present proportions have the thousands of displays in the great buildings been as far forward on the opening day. When Sir William Mulock touched the button at 2 p.m. on Tuesday practically the entire exhibition was in readiness. This means a good deal to the people who go to the exhibition to learn, to get ideas to help them in their business. There are fewer sightseers there, better opportunity is afforded for examining things of interest and the people whose business it is to give information are better able to do so satisfactorily. Heretofore much of the exhibition has been in a very unprepared state on opening day and there was little encouragement for people to come early. This year there is a decided change for the better in this respect.

Newly Housed.

Within a year or two the exhibition has taken on a greatly changed appearance. Few of the buildings of only a little while ago remain. In their places are the new Process Building, the Manufactures and Arts Building, the Administration Building, the Dairy Building, the Press Bureau, and two new art galleries. All these are of brick and steel or cement construction and will endure till they are outgrown. The old Main Building, now named the Transportation Building, originally erected on the old exhibition grounds and known thirty years ago as the Crystal Palace, continues as the hall mark of the great fair in the minds of a very recent generation of fair-goers. Machinery Hall still crowns the rise at the north limit of the park, but its accommodation has long been outgrown. The dog show building, the live stock accommodation, the Women's Building and the grand stand are as they were. Most of them are substantial and expensive buildings. The grand stand cost $100,000 and will seat 17,000 people, while 23,000 have been crowded into it.

Art of Display.

A much more difficult proposition is the art of display, which includes decoration. At the exhibition hundreds of expert minds have been exercised to arrive at the results attained and every individual has tried to make his lay-out more attractive and tempting than those about him. Surely amid this great array of practiced effort at display the dullest merchant in Canada could not fail to get some ideas for the improvement of his store, and a live man will get ideas to keep him busy till exhibition comes again.

Next week's issue will contain a more extended description of the fair with numerous illustrations.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

COUNTRY HARDWARE MERCHANT.

Address by J. W. Read, Before the Recent Convention of the Kentucky Retail Hardware Association.

My idea of a country merchant is first that he should be a gentleman in the fullest sense of the word and realize that he is an important factor in his home town for the good or bad state of society. He should realize that he exerts an influence in his community and this influence should always be on the side of right.

He should be courteous to his customers. Discourtesy is a crime and, if continued in will banish any merchant from business if it does not land him in the penitentiary. He should study his business, try to understand the difference between raw products and finished articles and know their merits so that he can explain to his customers the points of excellence. He should study his customers as well as his stock and try to know their peculiarities and anticipate their wants and have goods to suit their taste. It is not necessary that he should make every one his confidant and explain to each his financial affairs and what he is doing in business, but there are two parties to whom he should never refuse to make a statement whenever requested—the mercantile agency and his jobber.

Unfair Competition.

I don't suppose that anything gives the country merchant so much thought and worry as unfair competition. His city brother can have his unions or organizations and arrange prices, what each shall sell and at what per cent., and these arrangements are lived up to, but he has no such opportunity. He generally has no competitors except grocery keepers and blacksmiths, who seem to think he has encroached upon their rights and territory and they feel in duty bound to cut his throat whenever they get a chance by selling some article for less money than cost, of getting a special order for something which they do not handle and he does and letting the customer have it at cost and freight.

If you are placed in such a position make it a special point to keep your store well stocked with an assortment of hardware which they do not handle as well as with the staple line they do, taking special care that you do not let your stock run out of any of these articles and adding from time to time such novelties as you can afford to pay for, working and selling all such lines at a reasonable per cent. profit and treating your competitors with courtesy until you have convinced them that you have a right to exist and that you are not trying to run them out of business, but are making but one effort and that effort only to be considered.

Discounts.

A hardware merchant should always pay for goods in time to take discounts. While the discount is small on hardware it pays to take advantage of it in more ways than one. You save more than the regular rate of interest on your money, save the annoyance of receiving statements and the practice begets for you a name of being prompt, which is worth a great deal to a country merchant. But if it should ever happen that you are unable to meet a bill when due, be just as prompt to notify your jobber of the fact and explain to him fully

Advertising.

Advertising is a feature of the business that must not be neglected. No one can do this for you. Of course we all have a general idea how it should be, but if you try to copy city ads you have wasted your time and money—that is, if your town is like the general run of country towns. I consider your country paper the best medium you can use if your ads are made attractive, not dull; honest, fair prices quoted and ads changed every week. Follow this with circular letters mailed to your customers calling attention to special lines handled, with a polite invitation to visit your store when in town and make it their headquarters. Perhaps you can run special sales on special days. You must be judge of that.

Keep Goods in Sight.

Keep your goods in sight. Don't hide them in drawers and boxes It is just as easy to dust and wipe off goods as to haul them out of such places when called for by customers. Showcases and display racks are cheap and will sell you many an item in twelve months that would never be sold out of a drawer or box. Arrange your stock so you can handle it with the least expense. Group each distinct line by itself and display with price cards.

Your stock should be as varied as your capital will permit. Purchase anything that will sell that will yield you a good profit. Of course you know horseshoes will be called for every day, but they pay only five per cent., when the same amount invested in some novelty which will call for some of your time in selling will pay fifty per cent. This is time well spent. It advertises your store as well as being a profit-maker for you.

CONVENTION PROGRAM

The following program (subject to revision by Executive Committee) has been arranged for the Ontario Retail Hardware and Stove Dealers' Association convention to be held in the Labor Temple, Church Street (a few doors north of Queen St.), Toronto, next week.

Tuesday, Sept. 4

9.00 a.m. Meeting of Trade Grievance and Mutual Insurance Committees.
10.30 a.m. Meeting of Executive Committee.
1.00 p.m. Enrollment of Delegates.
1.30 p.m. Roll call and Reading of Minutes.
2.00 p.m.
(a) President's, Secretary's and Treasurer's Reports.
(b) Report of Executive Committee.
(c) Report of Mutual Insurance Committee.
(d) Report of Trade Grievances Committee.
(e) Appointment of Resolutions Committee.
(f) General Business.
(g) Appointment of Special Committee to meet Special Committee of Jobbers.
(h) Adjournment.
8.00 p.m. Committee Meetings.

Wednesday, Sept. 5.

9.00 a.m. Convention reassembles.
(a) Report of Special Committee
(b) Report of Resolutions Committee.
(c) Unfinished Business.
(d) Adjournment.

CHICAGO HARDWARE SHOW.

The success of the Chicago Hardware Show, which will be held at the Coliseum, Chicago, February 13, 14 and 15, 1907, in connection with the annual meeting of the Illinois Retail Hardware Association, is already assured, 90 per cent. of the 280 spaces having been reserved by manufacturers and jobbers. G. R. Lott, 1002 West Lake street, Chicago, manager of the show, reports that one exhibitor has taken twelve spaces, and four, six and eight have been reserved by several. From present indications this exhibit will be one of the largest and most complete expositions of hardware manufactures ever held in America.

NEXT WEEK'S CONVENTION.

Every indication points to a very large attendance at the convention in Toronto next Tuesday and Wednesday. Letters containing applications for membership, complaints for consideration by the trade grievance committee, and notifications of intention to be on hand, are constantly being received. The trade grievance and mutual insurance committees have arranged to meet at Toronto at 9 o'clock Tuesday morning and the executive will take up their work at 10.30.

Every bona fide hardware dealer is welcome to attend the meetings of the convention whether members of the association or not.

Let every one be on hand and be on time. The convention programme is given in full on this page.

QUEBEC TO BE REPRESENTED.

An interesting visitor to the convention of the Ontario association next week will be Fred C. Lariviere, president of Amiot, Lecours & Lariviere, hardware jobbers and retailers, Montreal, and a leading member of the Montreal branch of the Retail Merchants' Association. Mr. Lariviere is an enthusiast on the subject of mutual insurance by retail hardware dealers and should be able to aid materially in the discussion of this important matter. His presence at the convention should also be of advantage in considering the proposal made to form a national retail hardware association in Canada.

CANADIAN HARDWARE STORES

No. 7.

The business so long carried on by J. A. Flett, Vancouver, has this year been formed into a limited liability company. Mr. Flett originally started business in 1896 and mainly devoted his attention to the stove and range business, but the increasing growth of the city compelled him to take in other branches of the hardware business until he now has a complete assortment of builder's and shelf hardware, carpenter's and mechanic's tools, etc. In addition to a large stock of roofing and iron cornice work in which the firm makes a specialty.

Last year the city store had to move to more commodious quarters owing to increase of business and this year the Mt. Pleasant store has been compelled to follow the same example for the same reason, so that the firm is now quartered in two of the finest and most up-to-date fitted stores in British Columbia. Under the new regime, J. A. Flett holds the managing directorship, while the other directors, A. McLeod, W. R. Owens and C. K. Snell, each have their particular positions, Mr. McLeod managing the roofing and cornice business, Mr. Owens the Mt. Pleasant store and Mr. Snell the city store.

The arrangement of the city store with the central silent salesman and no counters on the sides is in line with the most up-to-date ideas in store arrangement. Behind the showcases a neat display of enamelware display is effective and the only criticism which suggests itself is the absence of a set of Bennett shelf boxes on the hardware side of the store. This store vies with those of Emerson & Fisher, St. John; Amiot, Lecours & Larivieye, Montreal; Rice, Lewis & Son, Toronto, and the J. H. Ashdown Co., Winnipeg, in the race for being the banner hardware store in Canada. Each of these has special features worthy of emulation by other merchants.

The J. A. Flett Company's branch Store at Mount Pleasant, Vancouver.

CANADIAN HARDWARE STORES, No. 7—Main Store of the J. A. Flett Company, Vancouver.

ranges is made and in the rear of the store building the elevated offices overlook the whole store. The tin and stretcher, washing machine, lawn mowers, etc., have thrown the stove display into the background for the Summer season, but the plentitude of space prevents the store getting a crowded appearance.

The suburban branch store has plenty of floor space and the stock is assembled in an attractive manner. The curtain

---

LET GOODS SELL THEMSELVES.

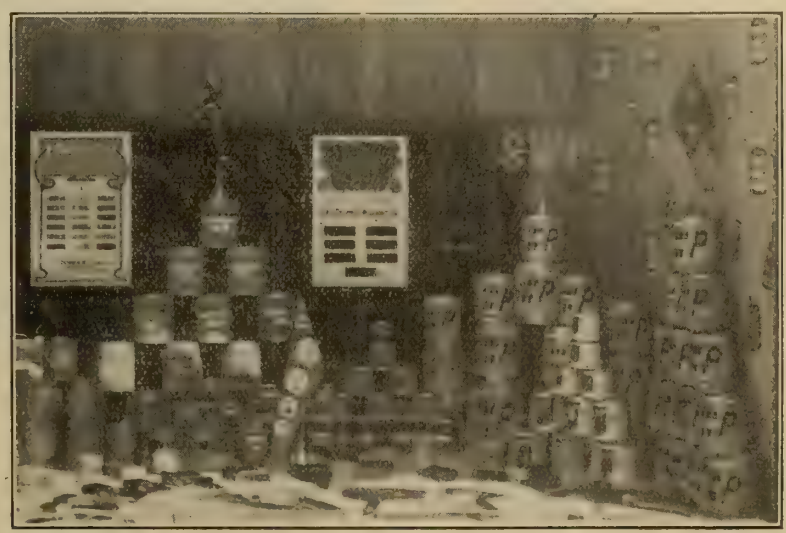
There is such a thing as carrying interior display to an extreme. Some classes of hardware boxes allow samples to be kept in plain view (if the clerks learn to keep them there) while other show cases hide the goods and keep them out of the customers' sight and reach. Most customers can be relied upon to do their own thinking and in many cases sales have been made by a silent suggestion from the dealer, he merely leaving samples of goods around on counters or tables where customers could handle and examine them.

This idea is well illustrated by the story of a wrench salesman who called on a merchant and said he had nothing to sell but merely wished to show how the sales of his line of wrenches could be increased. Said he: "The nicest way to introduce this tool to your trade is to padlock it onto a dog chain, fasten one end to the rear of your paper roll, on the counter, and pass the wrench and chain across the counter, letting the wrench hang outside, high up near the top of counter, where people can handle it, and get acquainted with it themselves Oftentimes dealers promise to do this, and then forget about. One dealer two years ago, said he would put one up. I called again a few days ago and he said he had forgotten to do so, and asked if I would not "do it now" myself. So I went behind his counter and fixed it, and before I left his store he had sold a wrench, also an attach-

ment and four extra dies to a bystander. At another place they chained up a wrench and on calling four months later they had four wrenches chained up, and had ordered a gross of wrenches during that time. There are lots of things you keep that sales could be increased on if your customers could get their hands on them."

ORIGINALITY IN DRESSING WINDOWS.

"Regarding show window dressing in small towns," writes an eastern sporting goods dealer, "I think our window displays sell more goods for us than any other method of advertising. Of course, I believe in a liberal policy with respect to newspaper and trade journal publicity. Our firm spends hundreds of dollars each year on printed advertising; but for effective and best results, the attractive show window has proved superior. There is a broad field for originality in dressing windows and upon this feature depends the drawing power of the display. I think it is pretty generally admitted that window displays should be changed often, at least every two weeks. It is a good plan to feature with a different line of goods each time. For example, display baseball goods prominently one week, then fishing tackle, tennis goods, etc. Neatness is another point to consider in fixing up the window. Keep the glass clean, dust off the goods occasionally and do not allow dead flies and other unsightly objects to accumulate Another thing that helps a window display is a liberal distribution of price marks. Quite often a pedestrian stops before a window to examine something that has caught his eye and which he probably had been thinking of buying sometime in the dim future. If the price mark is on the article and it happens to suit his means, nine times out of ten he will step right into the store and make his purchase. Displays need not be elaborate if changed often. I know of a clothing man in our town who changes his own window on an average of twice a week and every time I go by there I catch myself looking in to see his new line. Get people accustomed to looking in to see his new line. Get people accustomed to looking in your window for new displays. A man doesn't look into a window many times without going inside and talking over the goods and most likely making the purchase."



PORCH WINDOW SUGGESTED.

When displaying porch furniture, sporting goods, hammocks and travelers' articles a simple and inexpensive background may be constructed to represent the porch of a Summer cottage. Two large wooden posts should be placed upright at the front of the window, with a railing about three feet in height clear across the front and connected with the posts. The railing may be built out of pine lumber and it and the posts should be painted white. A few artificial flowers and vines twined about the posts and the railing will give a pleasant effect.

On the "porch" place a hammock and a few porch chairs, and on these chairs and on the floor place a few traveling bags, a baseball bat, glove and ball; a couple of tennis rackets, and an oar or two. These should all be so arranged as to look as if they had been carelessly left on the porch of a Summer home cottage.—The Hardware Trade.

AN S. W. P. WINDOW.

In the accompanying window display of paints and brushes, arranged by W. C. Jones with H. H. Otton & Son, Barrie, the exhibit of goods is much better than the illustration makes it appear. Light reflections make some parts show to better advantage than others and dull printing paper was used instead of the gloss finished paper. The white draping on the floor, walls and ceiling of the window gave the display a neat and cleanly look and the pyramids of paint cans surmounted by flags and enclosing a semi-circular design of paint and white wash brushes was calculated to attract the attention of possible customers.

Paint and Brush Display Made by H. H. Otton & Son, Barrie, Ont.

CHANGE DISPLAYS FREQUENTLY.

Change your display very frequently. A week is as long as any display should remain in the window and it is much better to change them oftener than that, unless the display is one which is unusually elaborate and which entailed a great deal of time and labor in its construction.

People soon learn to look at windows which are frequently changed, and they take an interest in seeing what the latest display is. Many merchants would be surprised if they really knew to what extent good window displays are the subject of comment, on the part, not only of the women, but the men as well. People will talk about a good, interesting, snappy window and they will look for the next trim, to see if the decorator has outdone himself.

A NOVEL BACKGROUND.

Chicago merchants have been making use of a novelty in the way of backgrounds. They have been dying excelsior a bright red and using it for covering the top, floor and background of the window. Electric lights and signs are also bright red, and so are all the price tickets in the window. Against this vivid red background black hats are shown. This is a very telling and clever effect and one that can be cheaply and easily arranged.

ARTIFICIAL ICE CREAM.

To make vanilla ice cream by artificial means, Prof. Stillman, of Stevens Institute, New York, on occasion of his recent chemical dinner, took some refined cottonseed oil, placed it in a centrifugal machine and revolved it at a velocity of 3,000 revolutions a minute. A beautiful emulsion was thereby produced, which was then frozen, chemically, of course. The flavor was obtained by the addition of vanillin glucin and nitrobenzol. They say that ice cream composed as above is sold in many southern states where cottonseed oil is more plentiful and consequently cheaper than milk or cream. It is far from harmful, tastes good and does not melt as quickly as the genuine ice.

FIRE AT MAPLE LEAF WORKS.

The Maple Leaf Harvest Tool Company, of Tillsonburg, manufacturers of forks, hoes, rakes, etc., had a fire Tuesday in their forge department which fortunately was got under control before a great deal of damage was done. There will be no stoppage of business in so far as orders are concerned, and the company will be able to ship all goods the same as usual.

BUSINESS MANAGEMENT

Article V—By Howard R. Wellington

Purchases and Stock Records.

In almost nine cases out of ten the business which does not succeed may trace the cause to the fact that somewhere in the organization there has been a lack of system in arriving at the actual cost of expense of doing business. For instance, a merchant may calculate that his expense of selling is 10 per cent., advancing his selling prices accordingly, overlooking that there are other expenses in connection with running his business, such as rent, insurance, light, fuel, etc., which would necessitate advancing selling prices considerably in order to assure a fair margin of profit.

As to the correct percentage to add to cost prices for expenses and cost of selling before figuring selling prices, it would depend entirely upon the nature of the business. A fair percentage may be obtained from the previous year's statement of profit and loss account, and unless some unusual item of expense arises the advance may be based upon the result of past years.

Orders may be placed to re-stock lines which have run very low, thus avoiding the loss of sales which so frequently occurs through not having the goods on hand when required, and a good assortment will constantly increase business.

Of course, if the merchant does the selling himself and is able to watch the stock carefully, no record of goods purchased and sold would be necessary, but a record of costs and selling prices would be very useful to every merchant.

In the illustration the merchant in purchasing goods at $1.60 net and advancing 10 per cent. for expenses and 15 per cent. for profit, and selling at $2.10, would be making a gross profit of 31¼ per cent.

Stock.

Stock should be taken actually at least once a year, valued at actual cost when goods were purchased, notwithstanding that possible prices have advanced slightly; extended and added for the purpose of closing the books.

It is an excellent plan occasionally to look over stock which has been on hand for some time, and for which no immediate sale is probable, and mark goods down to promote ready sale, as it is not a good policy to carry "dead stock" from year to year at the original cost of the goods; in fact, when a business is wound up, the stock is usually sold for about 50 or 60 per cent. of its value on the books of the dealer.

A method for looking after purchases for different departments and payment of accounts, with illustration, will be given later.

Don't let the general merchant get the trade in kitchen furnishings and similar lines away from you. He is likely to do it if you don't look out, as he can make some attractive prices in this department—some that the exclusive hardwareman will have to hustle to meet.

From Whom	Goods	Bought			Sold			Balance in Stock	List Invoice Price		Net Invoice Price		Advance for Expenses 10%		Advance for Gain 15%		Selling Price	
S.P.Co.	Silks	1905 Apr	10	yds 50	1905 Sept	5	yds 10	40	2	00	1	60	1	76	2	02	2	10

Stock and Cost Cards.

Cards (A) alphabetically arranged, according to the various lines carried in stock, or according to the name of the concern from whom the goods were bought, may be used to advantage in giving full information as to the goods purchased, the cost, stock on hand at present, list price, net price, advance on cost for expenses, advance on cost for profit, and selling price.

It might appear at first sight that these records would entail a large amount of work, but if the sales records are posted to the sales column on the cards each day, the information which the cards contain will be simply invaluable in showing at any time the actual stock on hand without referring to the shelves; the cost of each line purchased without referring to the purchase invoice, which has sometimes been misplaced, and also the correct selling prices based on experience of past years.

NEW INVENTIONS.

G. Fais, New York City, has invented a combined bolt and hasp having movement within a case, as well as through holes or openings formed in a door with which the lock may be associated, said case having a beam on the door, and being provided with a catch for engaging with the bolt and preventing the latter from being moved outwardly or withdrawn after proper manipulation thereof for effecting locking engagement with the hasp of one of the usual handles of a milk can or the like.

I. J. Griffin, Ossining, N.Y., has a new invention, the object of which is to provide a new and improved nut-lock arranged to allow convenient screwing up of the nut on the bolt to the desired position, to securely hold the nut against accidental return movement, and to permit the operator to unlock the nut for unscrewing the same whenever it is desired to do so.

F. A. Buck, Hubbardston, Mich., has secured a patent for a new construction of a stove. In operation the damper is lowered to close communication between the rear flue and the smoke vent while the fire is kindling, making direct draft from the fire pot through the smoke-consuming chamber into the vent. Well kindled, the direct draft may be shut off by raising damper to close communication between upper part of stove and vent, thus forcing heated gases down through the front flue, the base flue, and up through the rear flue. Draft in either direction may be regulated by check-drafts. Magazine lightly covered, all draft must be through the opening between the baffle-plate and the front lining section.

R. Christensen, Ogden, Utah, has invented an improvement to mop wringers to provide a wringer which forms a permanent fixture of a pail or like receptacle and is arranged to permit of conveniently placing a mop in the wringer to wring out the mop and to cause the dirty water to pass into the pail without splashing the water upon the floor during the wringing operation.

HARDWARE TRADE GOSSIP

Ontario.

G. A. Richardson, Guelph, has been in Toronto during the week.

Frank A. Childs, of Aaron Childs & Son, Gravenhurst, was a visitor in Toronto on Thursday.

A. H. Gingrich, Woodstock, was one of the hardware dealers who took in the Exhibition this week.

H. A. Dunn, of H. S. Howland Sons & Co., Toronto, has returned to his desk after a fortnight's illness.

Harry Robinson, timekeeper of the Canada Foundry Co., Fort William, was in Toronto during the week.

T. E. Prince, hardwareman, 550 Bloor street, Toronto, has returned from a two-week's fishing trip at Sturgeon Lake.

Frank Taylor, of the Western Foundry Co., Wingham, is recovering from a broken collar bone received in a recent accident.

C. L. Moffat, Calgary representative of the Moffat Stove Co., Weston, is visiting the family and business headquarters this week and taking in Toronto Exhibition.

Lou Ross, who has been with F. C. Hunt & Co., plumbers, London, for the past five years, has severed his connection. He was presented with a suit case by fellow employes and a scarf pin by Mr. Hunt.

Amongst the Ontario hardwaremen visiting the Exhibition at Toronto this week were: Mr. Ross, of Ross & Matthews, Cannington; H. Sargents, Deer Lake; L. Richardson, Maple; G. W. Stacy, Warburton; W. H. Pogue, Little Britain; S. G. Carstead, Flesherton; Thomas Creeper, Hampton; Wm. Suggett, Valencia; N. Barrie, Kinmount; W. Gordon, Tweed; C. M. Rankin, Falding; G. P. Hart, Carnarvon; F. W. Reynolds, Bethany; James Coumans, Chipstow; Geo. Beckett, Goderich; W. R. Shields, Coboconk; C. Sorels, Richmond Hill; S. W. Vogan, Walkerton; J. W. Shields, Victoria Road; L. Y. Reid, Georgetown; John McIntyre, Harrow; W. Ough, Aurora; W. S. Wisner, Brantford; Fred Shurly, Galt; W. N. O. Watson, Ayr; J. C. Kennedy, Owen Sound.

Quebec.

Thomas Wilson & Co., hardware, Montreal, have registered.

Geo. Boyd, of the Montreal Rolling Mills, is on his vacation.

Presseault & Larose, plumbers, Montreal, are about to dissolve partnership.

Aime Lemieux, general merchant, of Henryville, spent a day in Montreal this week.

A. Russell, general merchant, of Durham, Ont., called at the warehouses of his Montreal jobbers a few days ago.

H. E. O. Bull, of Decatur, Bull & Co., manufacturers' agents, Montreal, has gone west as far as Winnipeg on a business trip.

Mr. Vincent, of the Vincent Mercantile Co., Parry Sound, called on Montreal wholesale dealers this week.

Mr. Jackson, manager of the Vincent Co., South River, was a visitor in Montreal this week.

Mr. Chabot, of Chabot, Frere, general merchants, L'Annonciation, was among the hardware buyers seen in Montreal this week.

Jordan Steeves, hardware merchant, of Hillsborough, N.B., stopped off at

HAROLD A. ANDERSON,

of Merrick, Anderson & Co, Winnipeg, one of the Winnipeg four-oared crew, Champions of Canada and America.

Montreal this week while enroute to the Toronto Exhibition.

Mr. West, head bookkeeper for Ross Bros., hardware merchants, Edmonton, is paying a visit to Montreal. Mr. West was formerly with the Montreal Rolling Mills.

R. H. Fortye, manager of the Peterborough Shovel & Tool Co., Peterborough, called on the Montreal trade this week and took a number of good orders for his products.

H. D. Anderson and A. Brooks, directors of the Associated Portland Cement Manufacturers, England, were in Montreal this week and will spend some time visiting this country.

R. G. Kingan, of the Kingan Hardware Co., Peterborough, accompanied by his wife, visited Montreal this week. While in the city Mr. Kingan called on some of the hardware jobbers.

The Montreal Rolling Mills have installed eight feed water regulators, manufactured by the Williams Gauge Co., Pittsburg, who recently opened a branch in Montreal. The Canadian Rubber Co. have also put in four regulators of the same make.

A break in the Lachine Canal this week, temporarily crippled some of the manufacturing concerns on its banks. Among others, the Canada Paint Co's plant was compelled to stop for a few hours, while a change was made from water power to steam. That was the extent of the damage, however, and shipments will be continued without any break.

Maritime Provinces.

S. W. Wetmore, traveler, Halifax, N.S., has returned from a visit to New York, where he attended the convention of window dressers.

Western Canada.

K. Whimpster has opened a new hardware store at Fernie, B.C.

Charles L. Moffatt, of the Moffatt Stove Co., Calgary, Alta., is on a visit to his old home at Weston, Ont. Mr. Moffatt intends removing to Winnipeg from Calgary and taking over the management of the entire western business for his company. Larger premises at Winnipeg will also be secured.

Edward Gurney, president of the Gurney Foundry Co., Toronto, is on a months' trip to Western Canada and will go as far west as Vancouver. In Winnipeg last week he announced that his company will shortly erect a new warehouse there. Land has been purchased on Lombard street and a new building, five storeys in height, will be erected at once. The cost will be about $50,000.

A CHAMPION OARSMAN.

"A chip of the old block," exclaimed many a hardwareman when he read in his daily paper not long ago that four Winnipeg oarsmen had won the championships of Canada and America at St. Catharines and at Worcester, Mass., and that the bow oar was handled by Harold A. Anderson, a son of T. A. Anderson, of Merrick, Anderson & Co. In his younger days the father was a noted oarsman and his son is emulating his brilliant record.

Harold returned from the east a short time ago bringing with him the trophies of his victories. At St. Catharines the four Winnipeg boys won the championship of Canada and a little later they had the good fortune to win the championship of America at the Worcester races. These contests were witnessed by 60,000 people.

Hardware and Metal takes pleasure in reproducing the portrait of this champion oarsman.

HEATING SPECIFICATION BOOK.

The Pease-Waldon Co., of Winnipeg, are issuing to the trade a very handy book of blank heating specifications. By following the instructions and using the blanks provided, a dealer cannot easily go wrong in ordering a furnace. A copy will be sent to any dealer who mentions Hardware and Metal in asking for it.

CANADA'S METAL INDUSTRY.

Statistics showing the output of the iron and steel and other industries for which bounties are paid by the Dominion Government have been made public during the past week, the figures covering the current year ending June 30 last. From practically every standpoint the totals are satisfactory as while some sections of the community might be inclined to grumble at the payment of over $3,000,000 in bounties in one year the majority of business men will consider that the earning of this large amount by industries which were only a short time ago in swaddling clothes is a token of the wonderful prosperity Canada is destined to enjoy in the years to come.

The figures showing the production of the various industries are given on another page, the general healthy tone being reassuring and the doubling of the steel output being eminently satisfactory. As the bounties are timed to end next year, it is timely to study the amounts earned by each industry with a view to reaching a decision as to the wisdom of continuing the payments as is being urged by many. We cannot but feel that an experiment which has resulted so successfully might well be repeated, although a readjustment of the amounts of the bounties paid would probably be in order. Bounties are more easily kept track of than protective duties.

The total amount of bounties paid during the year was $3,088,407, an increase of $229,056 over last year. The figures for the two years are as follows:

	1904-05.	1905-06.
Iron and steel and steel products	$2,234,684	$2,400,773
Lead	330,645	90,197
Binder twine	13,789	15,079
Petroleum	350,407	291,157

The heaviest earner of bounty was the Dominion Steel Co., which was paid in the last fiscal year on iron, steel and articles made from steel the sum of $957,337. The Algoma Steel Co. came next, with $535,190; Hamilton Steel, $200,965, and Nova Scotia steel, $187,693.

The bounties for iron and steel earned by the several companies in 1905-06 were as follows:

Pig iron—	
Canada Iron Furnace Co.	$ 40,256
Deseronto Iron Co.	13,664
Hamilton Steel & Iron Co.	98,897
Dominion Iron & Steel Co.	246,353
Londonderry Iron & Mining Co.	51,525
Algoma Steel Co.	167,420
Steel ingots—	
Hamilton Steel & Iron Co.	$ 67,578
Nova Scotia Iron & Coal Co.	96,803
Dominion Iron & Steel Co.	408,571
Algoma Steel Co.	367,770
Articles manufactured from steel—	
Dominion Iron & Steel Co.	$302,413
Nova Scotia Steel & Iron Co.	25,815
Montreal Rolling Mills Co.	7,386
Hamilton Steel & Iron Co.	34,217

MONTREAL GETS LEAD WORKS.

After three months of dickering with the Halifax Board of Trade and city council who pressed them to locate in the eastern city, Brandram-Henderson, Limited, have decided to establish their lead corroding plant in Montreal.

This was the original intention of the company, and they procured and still hold an option on a property in St. Louis, a suburb of Montreal. When this came to the attention of the board of trade in Halifax, where the parent house of Henderson & Potts is located, they made an offer, backed by the city council, to pay a bonus to the lead corroding works of $10,000 a year for ten years, on condition that they establish a plant in Halifax that would employ at least 75 hands, and have a pay roll of $50,000 annually.

In order to make this agreement valid, it would be necessary to secure legislation at the next session to secure legislation at the next session of the local house, and, to ensure the bill passing, Premier Murray was asked to make it a Government measure. This he promised to do, but he now finds the Government is divided on the subject. Hon. Mr. Drysdale opposing the idea. In consequence, the premier has now informed the board of trade that the bill cannot be made a Government measure, and the deal is off.

Geo. M. Edwards, manager of the Montreal factory of Henderson & Potts, stated to a Hardware and Metal representative that on the visit to Montreal next week arrangements would be completed and a definite announcement made. It is quite likely that building operations will be commenced almost immediately on a fine cement structure, which the company have in view. Every effort will be made to have the roof on before the frost sets in.

THE METAL SITUATION.

A more active market in copper has been the chief development this week. The demand has been excellent for some time past and producers in the United States have been receiving new orders every day from both home and foreign quarters. Exports have exceeded expectations and will probably reach 20,000 tons for the month. Moreover, the visible supply has been considerably curtailed by several recent happenings.

Tin is nominally quoted at the same prices as last week, but these have been subject to several fluctuations. Futures are held somewhat higher, but there is very little business doing in them. The month of August has seen this metal somewhat higher than during the two previous ones, but May's figures have not been touched at any time. A comparative statement of the average daily price of tin, from May till August, will show that June was four cents lower than May, July was two cents lower still, while August was about 3 cents higher than July.

A peculiar condition exists in spelter for although the United States markets are very dull, the demand in London seems to be quite active and the ruling price there this week is 2s. 6d higher than last. Canadian dealers report a good inquiry and quotations are firmly held.

Pig lead has again advanced, following a jump of 1s. 3d in London, and is strong at the new figure. American centres have not followed the lead of London, but, as receipts are smaller of late, the market at both New York and

St. Louis is reported to have a firm undertone and the outlook is encouraging to sellers.

Booming is no word to describe the pig iron market. For some time past the American furnaces have been booking orders in such lively fashion that most of them are now filled up months ahead and prices have been jumping up. For some reason or other the English market soon felt the effect of the boom, and Canadian agents for English furnaces were surprised at the higher rates they were forced to pay when their stocks ran out recently. Scotch pig has also moved up, but not to the same extent as the English iron. The foundries and other consumers in this country are now filing their specifications for Fall delivery and in view of a possible scarcity some large bookings are being made.

WHAT TO DO THIS MONTH

September is a busy month for the retail hardware dealer. Especially is this the case in the larger towns and cities, for, at this time of year, people have all come back from their Summer's sojourn in the country, and trade sets in much more actively, for many reasons.

Scarcely a family who have spent the Summer out of town, come back to their home and find things as they left them. Cooking utensils and other sundries have been left or given away in the country and will have to be replaced. Consequently, the live hardwareman will seize the opportunity this month to conspicuously display a good line of house-furnishing goods, and tactfully introduce them to the notice of his customers who are just back to town.

Secure Trade from Institutions.

The opening of various colleges and educational institutions in September opens a splendid field for the hardwareman. In the case of boarding schools, cooking utensils will be in active demand and the cutlery equipment is subject to almost annual additions. In fact, a fair quantity of general hardware will be disposed of in this way.

As for the pupils themselves, they will want penknives in good quantities. If they are going away to boarding schools a goodly proportion of their equipment in the way of toilet boxes, dressing cases, etc., can be supplied by the hardwareman, who should not be slow to advertise the fact. A display of penknives of various grades, bearing some such motto as "Just right for pencil sharpening," should prove to be a profitable expenditure of energy. There are few things which appeal more strongly to a school boy than pocket knives of approved manufacture, while the female portion of the school population will always be delighted by the daintier lines.

The season for wine presses and cider mills is, unquestionably, September. In many parts of the country there is quite a large demand for these goods, and they are lines for which a demand can easily be created this month by judicious display and advertising.

It is, however, in ammunition, guns, rifles, hunting coats and vests and other sporting supplies that the hardwareman reaps his greatest harvest during September. This season, from present appearances, will be a phenomenal one, and indeed already the quantity of ammunition sold has been remarkable. Some retailers are already placing sorting orders, and a leading Montreal jobber told the writer a few days ago that although his house had stocked an extra large quantity of shot this year, they found that some sizes were already being exhausted. All other branches of the sporting goods trade are correspondingly busy in Fall lines. The dealer should sort up his stock and see that every line is carried in plenty.

The football season is now on, also, and a window display of balls, pads, etc., should encourage clubs and individual buyers to place their orders with local dealers rather than sending away to mail order houses for their supplies. A little ingenuity should result in a miniature scene showing a football game in progress in the window, the players being represented by small doll figures. The upper part of the window could be attractively filled by a number of balls hanging from the ceiling.

Push Lighting Goods.

In September, too, the nights are lengthening and the country housewife commences to need a kitchen lamp, while the farmer begins to feel the need of a lantern. Some time ago when lanterns were much more expensive than they are at present a lantern had to last a number of seasons. But now that lanterns of the best quality are within the reach of all, there are very few who do not buy a new one every couple of years, while many replace them every season. This year promises to see a large consumption of lanterns, and from the orders which have been received by jobbers it would seem that the better grades will be the most lively sellers in September.

Lanterns can be displayed attractively if a little care is taken in their arrangement. In most hardware stores, however, they constitute anything but an ornament, being hung from the ceiling in haphazard fashion, or deposited carelessly in some dark corner. Bring out the lanterns in September, show them attractively, and advertise them in such a way that the whole town will see the necessity of buying lanterns.

Paints, Glass and Brushes.

The paint department needs some special care about the month of September. The time is pretty well past for any large orders for a mixed stock to be given, but there is usually at this time of year the Fall house-cleaning and the preparation for Winter. Floor paints, floor lacs, varnishes and stains should be overhauled, and attention called to the fact that they are on sale. The stock of glass, too, should not be overlooked, for the time will soon be at hand when storm windows are put on, which, on a house that is putting them up for the first time, means quite an outlay. Some lines of brushes, also, can be pushed to advantage amongst those who are painting or doing Fall house-cleaning.

Stoves and Furnaces.

The cool evenings commencing in September open up possibilities for the pushing of heating goods of all kinds and the time to prepare for a big season's trade is now. The advertisements in the local papers should draw attention to the dealer's display of the latest lines of stoves and ranges. It's not too early to put samples on the floor—in fact many dealers defer this until too late in the season. The jobbers co-operate with the retailers by offering to make early shipments with late bookings and every dealer should have his assortment of samples ready in order to catch the first customer encouraged to inquire about stoves by cool days or nights. If a customer asks to see stoves and cannot be shown the goods, the order is likely to go to another dealer who is more up-to-date. Furnace prospects should also be looked after. There are many buildings nearing completion at this season, the furnace or boiler contracts for which are not yet let. Before cold weather and the Fall rush really arrives the district should be thoroughly gone over for prospective furnace sales.

In September, also, import orders of Canada plate arrive and dealers should see that their stocks are full, not only of plate but of stove pipes and elbows, rivets, wires, enamel and other stove accessories.

The bookkeepers should also get busy on outstanding accounts amongst farmers. The time to make collections is rapidly approaching. Crops, on the whole, have been above the average and there is no reason why a goodly amount of the hardware dealers' money in the hands of the farmers, builders and other creditors should not be gotten in during the coming month.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 62.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Turpentine—Now quoted at 87 cents.
Builders' Hardware—American manufacturers have advanced.
Sheet Lead—Has advanced ¼ cent.
Pig Lead—Quotations 5 cents higher.
Pig Iron—General advance.

TORONTO.

Pig Iron—Hamilton No. 1 is now $21.50.
Ingot Tin—Market is not as strong.
Pig Lead—Now quoted at $4.65.
Coal—Anthracite is ten cents higher.
Turpentine—Advanced two cents.
Crude Petroleum—Declined two cents.
Lawn Mowers—Next year's prices will be nearly 20 per cent. higher.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 31, 1906.

Country orders are very large this week but business in the city is a little on the quiet side. The return of moderately cool weather has warned dealers that the Fall is at hand and the result has been a livelier turnover.

As the mid-summer period is now well over it is timely to compare this season's business with that of previous years. It is admitted on all sides that the time of "mid-summer dullness" was busier this year than ever before. Prominent jobbers state that they cannot recall the time in their business career, when the demand upon the producers of hardware and kindred lines was as great in comparison with the production, or when prices on such lines have been so strongly maintained as during these Summer months of 1906. The feature of the Summer's trade has been the inability of many manufacturers to keep up with their orders and the maintenance of prices, and even increases in the same.

There is every reason to expect an extraordinary demand for material this Fall and with this in view, a large number of dealers are finding it to their advantage to get in their specifications early.

A general advance in American builders' hardware has increased prices by about 7 1-2 per cent. Aside from this, there are no changes in prices to report.

AXES—The usual demand is shown. We still quote the following prices: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—In the United States, manufacturers have advanced prices and conditions here are steadier. The following prices are well maintained: No. 3 $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch. $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—Shipments of orders booked some time ago are going out freely. The season is now on for retailers. Our prices remain as follows: "Prism," $7; "Prism" globes, $1.20; Cold Blast, $4; No. 0 Safety, $3.50 to $3.75.

COW TIES—A first class business is being done. We give discount o nnow ties as 40 per cent. off list.

STALL FIXTURES—Trade is excellent at this time. Discount generally quoted is 35 per cent. off list.

SLEIGHBELLS—Orders are being booked right along and it seems that retail dealers in many parts were successful in disposing of their stock last Winter. We give prices: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape, $1.15 to $2; shaft gongs, 20c to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

RIVETS AND BURRS—Manufacturers are said to be crowded with specifications. Quotations remain: Best iron rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—A strong movement in this line is to be expected before long. We quote: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b. Montreal.

MACHINE SCREWS—Business continues in about the same condition. Discounts are as follows: Flat head, iron 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—Jobbers who filed their specifications early and consequently have a good stock on hand now are congratulating themselves, as there is very noticeable scarcity and manufacturers are unable to keep pace with their orders. We give discounts as follows: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS—A good demand is reported. Discounts still remain as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—We still quote $2.05 per keg base, f.o.b. Montreal.

CUT NAILS—A fair business is being transacted at $2.20 per keg base, f.o.b. Montreal.

HORSESHOES— Fall trade is now calling for large shipments. We quote: P. B. new pattern, base price $3.50 per 100 lbs.; M. R. M. Co., latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs. extra.

BUILDING PAPER—The same steady trade which has characterized the entire Summer is still keeping up. Prices are the same as for some time past.

CEMENT AND FIREBRICK — The same remarks apply as were made last week. Business continues to be largely in small lots. We quote prices as follows: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—The recent advances have held firm. We quote: 5-16 in. $4.30; 3-8 inch, $3.80; 7-16 inch, $3.60; 1-2 inch, $3.40; 9-16 inch, $3.35; 5-8 inch, $3.25; 3-4 inch, $3.10; 7-8 inch, $3.05; 1 inch, $3.

GREEN WIRE CLOTH—We are still quoting $1.45 per 100 square feet.

AMMUNITION—This is the best selling line at present and it is included in every order. We quote: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto Aug. 30, 1906.

Lawn mowers, which have been selling on a practically open market all Summer, have been brought back again to the former list price with 50 per cent. off. This is quite an increase over the past season's prices—equivalent to about 17 per cent. There is a firmness in all lines of hardware on account of the increased cost of the iron and steel used in manufacturing and the feeling among jobbers is that some advances will be made here and there from time to time.

At present, seasonable goods are selling well. Cutlery and table goods are in active demand.

AXES AND HANDLES—Trade has picked up during the past few days.

CUTLERY AND SILVERWARE—Fall and Christmas lines are now going out in good quantities.

SPORTING GOODS—All lines are selling well. Many jobbers say prospects are better than ever for this Fall.

WASHING MACHINES — A very good demand still exists.

CHAIN—We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; 3-8 inch, $3.95; 7-16 inch, $3.80; 1-2 inch, $3.65; 9-16 inch, $3.55; 5-8 inch, $3.45; 3-4 inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING — Our quotations are as follows: 2-inch mesh, 19 w.g., discount 50, 10 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE—We quote: $2.17 1-2 f.o.b. Cleveland.

BARB WIRE— We quote the following prices: On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65; f.o.b. Toronto.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The open market continues. We quote: $2.05 base.

CUT NAILS—We quote: $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7 1-2 off list. "M.R.M." brand, 55 per cent. off. "Monarch" brand, 50 and 7 1-2 off. "Peerless," 50 per cent. off.

HORSESHOES—Our quotations continue as follows: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

HORSE BLANKETS—Trade is good. Some large orders are coming in.

SLEIGHBELLS—A limited business is being done.

FARM TOOLS—Forks are selling well and a good season has been experienced in all farm tools.

RIVETS AND BURRS—Tinned rivets are now quoted net extra 4c. per lb.

SCREWS—We quote: On gimlet point 70 and 5 per cent. off; on cone point, 70 and 10 per cent. off list.

BOLTS AND NUTS—Stocks are bare and supplies very hard to get. Demand is keen with prices very stiff. We quote 55 and 10 per cent. off list.

CEMENT—We quote: For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch fire brick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27 1-2c. to 35c.

WOOL AND HIDES—Cow hides No. 2 are 1-4c. higher and 10c. is off the top price for horse hides.

Hides, inspected, steers, No. 1	0	12½
" " " No. 2	0	11½
" " cows, No. 1	0	12½

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Aug. 31, 1906.

Business in metals continues to be very large. Particularly is this the case as applied to sheets. Agents of the leading foreign manufacturers state that their mills are behind in deliveries, as they are meeting with considerable difficulty in obtaining raw material. The market is very strong and there are good reasons for anticipating an advance in prices in the near future.

Copper is again arousing attention this week. Experts freely express the opinion that never has the demand for copper been so great, or the outlook brighter. Several circumstances seem to be making for a short supply, and consequently higher prices. Production in the Lake Superior districts has been considerably curtailed by reason of labor troubles, and heavy floods in the southwestern fields have affected mining properties there. Moreover, the earthquake in Chile, which produces annually some 90,000,000 pounds of copper, will probably have put some of the mines in that country out of commission. There are rumors of hidden stocks of copper, but these, according to a leading refiner, are groundless. At one refinery which has a daily production of nearly a million pounds, the stock on hand is less than the average daily output.

Tin is still fluctuating, but the price now quoted is about the same as last week. The London market is going higher, but in New York few orders or inquiries from consumers are being received, so that the market there is quiet.

About the same story may be told about spelter. There is practically no buying movement in American centres at the present time, and general conditions are dull. The fact that the Canadian market is more influenced by London than New York or St. Louis accounts for the steadiness of spelter here, as prices are again higher in London.

A most animated demand is evident on the pig iron market. Bookings are very large and deliveries are difficult to obtain within a reasonable time. Consumers, as a result, are displaying considerable haste in placing orders.

COPPER—Conditions locally are practically the same as last week, but reports from New York would indicate that prices will soon again be advanced. We quote: Ingot copper, 21c. to 21½c.; sheet copper, base sizes, 25c.

INGOT TIN—Fluctuations have again occurred, but we are still quoting: 44c. to 44½c. per pound.

ZINC SPELTER—A good demand is shown and the market here remains steady at the following price: $6.75 to $7 per hundred pounds.

ANTIMONY—The quantity being sold is comparatively small. We still quote 27c. per pound.

PIG LEAD—Continued advances in foreign markets have forced local prices up to $4.50 to $4.60 per hundred pounds.

PIG IRON—The demand is exceptionally brisk. Our prices are:

"Dom.," No. 1, $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18.50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	23.00	"	"
" (special)	22.00	"	"
Summerlee No. 1	22.75	"	"
" No. 3 (soft)	21.75	"	"
Clarence No. 1	20.00	"	"
" No. 3	19.65	"	"
Cleveland No. 1	20.00	"	"

BOILER TUBES—We still quote: British and American tubes, 1½ inch, 8½c.; 2 inch, 8½c.; 2½ inch, 10c.; 3 inch, 12c.; 3½ inch, 15½c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Business is brisk at the following quotations: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror High Speed Steel, 60c.; Jowitt's Diamond J., 6¼c. to 7c.; Jowitt's Best, 11c. to 11½c.

MERCHANT STEEL—Business is

fairly brisk. We give the following prices: Sleigh shoe, $2.17½; tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.15 base and upwards; square harrow teeth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—Prices remain: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON — Owing to scarcity of raw material, the mills are finding it difficult to supply consumers. Prices are expected to be advanced shortly. We still quote: Queen's Head, 28 gauge, $4.35 to $4.60; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge, $3.35; Gorbal's "Best Best," 28 gauge, $4.25 to $4.50; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—We are quoting: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

CANADA PLATES—Heavy bookings are now being made. Quotations remain: 52's, $2.60; 60's $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

TIN PLATES—The market remains steady at the following prices: Cokes, base size, 1C 14 x 20, $4; charcoal, base size, 1C, 14 x 20, $4.25.

TERNE PLATES—We still quote $6.85

SHEET ZINC — In view of the strength now shown by spelter, the following prices are very firm: $7.75 in casks; $8 in less than casks.

SHEET LEAD—Owing to the advance in pig lead, sheets have also been quoted higher, and our prices now are: 2½ lbs., 5¾c. by the roll; 3 lbs. and heavier, 5½c. by the roll; small quantities, 25c. per hundred pounds extra.

BAR IRON—We are still quoting $2.05 base, f.o.b. Montreal.

OLD MATERIAL—Cast scrap is very scarce, and prices are firmer, owing to the briskness of the pig iron market. We give prices as follows: Light copper, 14½c.; heavy red brass, 14½c.; yellow brass, 11½c.; light brass, 8c.; lead, 3½c.; zinc, 4c.; machinery cast scrap, $15; wrought scrap, $13 to $14; stove plate scrap, $12; mixed rags, $1 to $1.20 per 100 lbs.; old rubbers, 7¾c. to 8c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Aug 31, 1906.

Pig iron, pig lead, and hard coal show the only changes this week, the latter making its last jump of ten cents on the first of September.

All iron markets are stiff and we are advancing Hamilton No. 1 to $21.50. A newspaper report stated that the Hamilton Steel & Iron Company had sold its entire output of pig iron and finished bars for the first half of 1907. We are in a position to say this is incorrect. Work has commenced on the company's blast furnace and it will be pushed forward rapidly so that it can be put in blast early in 1907. To Hardware and Metal, General Manager R. Hobson stated that the company had closed for their supply of coke at an advance and there was also strong talk of an advance in ores. He looked for a continuation of the present prices with a strong probability of their going even higher.

Every line has been active during the past week and a good business has been done. The scarcity of galvanized sheets in the sources of supply and the talk of higher prices is encouraging a larger local movement. The orders for Canada plates now being imported are also very large. Tin has weakened a little during the week and we are quoting a cent lower. Copper is in increasing demand with supplies none too plentiful. Lead has advanced following outside markets, and spelter is quieter. Altogether the market is a very satisfactory one.

PIG IRON—The market is strong and Hamilton No. 1 has been advanced 50c. Supplies are short and buying fur future shipments brisk. We quote: Radnor at furnace, $33; Hamilton at furnaces, No. 1, $21.50; Londonderry, f.o.b. Toronto, No. 1, $22.50; Middleborough, $22.50 to $23.

BAR IRON—Stocks are light and demand lively. We quote: $2.15 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

INGOT TIN—Fluctuations in outside markets have left prices about as they were. Locally the dealers are asking from 42c. to 43c. per lb.

TIN PLATES—Trade is active with prices unchanged. We quote: Cokes, base size, 14x20, $4; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS—Buying is active owing to the shortage reported in primary markets. We quote: 16 to 20 gauge, $3.65 up.

BRASS—The market continues firm with no price changes. We quote: 23c. to 24c. per lb.

COPPER—Prices are firm and the tendency is upward. Our prices are: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

LEAD—In response to the advances in foreign markets, $4.65 is now quoted for imported pig and $5 per 100 for bar lead.

ZINC SPELTER—Locally buying is active, but generally the markets are quiet. Prices remain unchanged. We quote: 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

BOILER PLATES AND TUBES — We quote: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60; tank plates, 3-16 inch, $2.45; tubes, per 100 feet, 1¼ inch, $8.50; 2, $8.80; 2½, $10.75; 3, $12; 3½, $15.80; 4, $20. Terms, 2 per cent. off.

ANTIMONY—Good business is being done in small lots. Prices are unchanged at 27c.

OLD MATERIAL — Dealers' buying prices are as follows: Heavy copper and wire, 15c. to 15½c. per lb.; light copper, 13½c. to 14c. per lb.; heavy red brass, 13c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8¼c. per lb.; tea lead, $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs.; scrap zinc, 4½c. per lb.; iron, No. 1 wrought, $11; No. 2 wrought, $3 to $5; machinery cast scrap, $15; stove plate, $10; malleable and steel, $5; old rubbers, 7¾c. per pound; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—We quote the following prices: Anthracite in cars at bridge, egg, stove and nut, $5.50; grate, $5.25; pea $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. P. and S., $1; slack, 75c.; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1¼ inch, $2.55; ¾ inch, $2.45; mine run, $2.35; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

From the Iron Trade Review, Cleveland, Aug. 30, 1906.

The danger of a runaway market on pig iron is apparently passing. Although buying is still active, it is being done more cautiously and frequently high quotations do not result in orders. Some very high prices are being paid for prompt delivery, especially on southern iron, for which more than $16 Birmingham for No. 2 has been paid, but $15.50 Birmingham for the remainder of this year and $15 for next year's delivery are about the correct market quotations. Small buyers have been compelled to pay more, but a large interest had no difficulty in placing an order at slightly below $15 for southern and at about $18 for northern iron, both for next year's delivery.

On the whole, the pig iron situation may be summed up as being very strong, but more satisfactory than recently on account of the disappearance of excitement.

The scarcity of crude steel in the central west is becoming very serious. The withdrawal of the Illinois and Inland Steel Companies from the market as sellers of billets has caused much anxiety among consumers at Chicago.

The Pittsburg district mills are also experiencing much difficulty in meeting their requirements. The operations of sheet and tin plate interests are considerably hampered.

Great activity in all finished lines continues. The American Steel & Wire Co. within a month has closed contracts for about 200,000 tons. Advances are announced this week of $2 on spikes, $2 a ton on track bolts, $1 on light rails and $1 on blue annealed sheets. Orders for tin plate are numerous for this time of the year, due in part to the anticipated advance in price. Specifications are heavy.

The dealers in old material seem to be confident of the prevalence of higher prices this Fall, as they are buying freely and advancing quotations. Consumers are not, however, very prominent in the market.

LONDON METAL MARKETS.

From Metal Market Report, Aug. 30, 1906

PIG IRON — Cleveland warrants are quoted at 53s. 7½d., and Glasgow standard warrants at 53s. 1d., making prices as compared with last week unchanged for Cleveland warrants and 10d. higher for standard warrants.

COPPER—Spot copper opened steady at £84 12s. 6d., futures £84 15s., and after sales of 150 tons of spot and 200 tons of futures, closed quiet at £84 15s. for spot, and £84 15s. for futures, making price as compared with last week unchanged on spot and 2s. 6d. higher on futures.

TIN—Spot tin opened weak at £182 5s., futures at £182 17s. 6d, and after sales of 100 tons of spot and 320 tons of futures closed steady at £182 5s. for spot, £182 15s. for futures, making price compared with last week 5s. lower on spot, 5s. lower on futures.

LEAD—The market closed at £17 10s. making price as compared with last week 7s. 6d. higher.

SPELTER—The market closed at £27 5s., making price as compared with last week 5s. higher.

U.S. IRON AND METAL TRADES.

From the Iron Age, Aug. 30, 1906.

Present scarcity dominates the pig market, and the possibilities of production in the farther future get scant notice. Consumers of foundry iron in particular, who find difficulty in meeting early wants, are pre-empting furnace output in the early months of 1907. Only a good beginning has been made in buying for next year, and naturally the large foundry interests lead the movement. At advancing prices further business has been placed. Sellers seem less eager than buyers to reverse the practice of many months of making short intervals between sales and final deliveries.

Pig iron prices have advanced 50c. to $1 a ton and variations in selling prices grow more noticeable. On southern iron prices for 1907 delivery range from $15 to $16, Birmingham, for No. 2 iron, the discrepancy coming in part from the practice of making delivered prices which meet district competition.

In steel making pig iron, since large buyers are chiefly concerned and they are willing to let a shortage be a shortage, the market has calmed down. With the starting of the new Bessemer steel plant at Youngstown the situation is simply that a certain tonnage of Bessemer iron will be converted there that under other conditions would have gone to increase the steel supply of the larger companies. Pittsburg reports sales of basic iron for the first half of 1907 at $18 at Valley furnace, including 25,000 tons for Buffalo. Bessemer iron has gone to $18.50 at furnace.

As indicating what may be expected later in the year, it is noted that three additional furnaces of the Illinois Steel Company, together producing 1,000 tons a day, will be active in the next 30 days. As humidity declines pig iron production in all districts will increase.

The complaint always attending an advancing market is heard here and there—that iron bought at low prices does not come forward at scheduled deliveries.

Though the United States Steel Corporation is pro-rating deliveries of semi-finished steel between its subsidiary sheet and tin plate companies and the independent mills in those lines, the latter are considerably short of their needed supply of steel. It is not true, however, that the Carnegie Steel Company has advanced the price of sheet bars to $30. September deliveries will be made at $29, as heretofore. Other sheet bar mills have sold at $30 and higher.

Buying of steel cars has begun in earnest, 15,000 being placed last week. Large orders are yet to be given out.

Heavy business in both sheets and tin plates is reported in the past week and advances in both lines appear imminent. Some independent producers have already put up their prices $1 a ton.

The bar trade shows signs of overselling. The premiums already secured by certain producers of steel bars may lead to a general advance. Some mills are fully sold for the balance of the year.

The basis for Lake Superior ores for 1907 is still a subject of diverse views, a 50c. advance being favored, while some sellers would stop at 25c. in the interest of eastern buyers. The Hill ore deal now finds litigation over Minnesota State leases its only obstacle.

Nova Scotia Trade News.

Halifax, N.S., August 29.

The iron markets are very firm and from present indications they will continue so. There was an advance recently of fifty cents per ton on iron, and dealers would not be surprised at a further advance, owing to the condition of the markets. The zinc markets are a little easier, and a decline of a quarter of a cent is noted. Cast steel is firm. Ingot tin is fairly firm, and there is a probability of an increase in the price of black sheet iron, which is now quoted here at $2.40 for 24 gauge. Wire nails are quoted here at $2.15 base, and cut nails at $2.40 base. Pig lead is quoted at $6.25, and sheet lead at $5.75 for rolls and $6.25 for smaller quantities. Stocks of glass held here are light, and the jobbers do not care to quote prices on their holdings. Cordage and cement are unchanged, and turpentine is quoted at 95c. per gallon by the cask, and $1 for less than casks. There has been a good sale for cutlery here this season, many American tourists purchasing goods of British manufacture, which they can buy here at much lower figures than in their home markets. Business is quite active, and satisfactory orders for Autumn goods are now coming in. Guns and ammunition are now selling, as the sporting season is now near at hand. Collections are very good all round, and from the present outlook business promises to continue good.

* * *

At a meeting of the provincial executive of the Prince Edward Island Government, it was decided to have the present bridge at Vernon River replaced by a modern steel structure, and the contract for the construction was awarded to W. T. McNeill & Co., of New Glasgow.

* * *

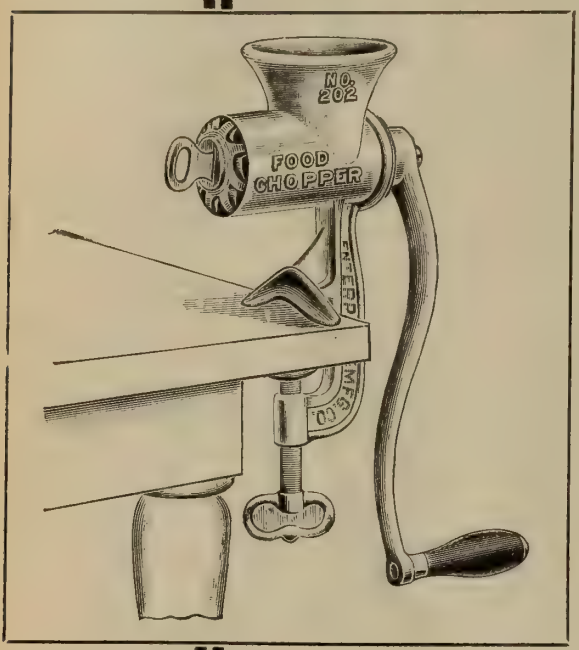
Many iron ore shipments are being made from Wabana, Nfld., to Philadelphia. The steamer Othello sailed early last week with 6,200 tons, and the Sangstad sailed for Rotterdam later in the week with 5,240 tons.

* * *

The Dominion Iron & Steel Company have commenced rolling rails for the Government section of the Grand Trunk Pacific Railway. Ten thousand tons are for delivery at Fort William, Ont., this Autumn, the balance for delivery at Quebec. The Standard Inspection Bureau, of Toronto, has been appointed inspector of the rails. C. S. Cameron, the comptroller of the steel company, who has been in Liverpool, is expected to reach Canada this week.

* * *

Sixty years ago the late B. L. Douglas and the late Robert Chambers, of Truro, started business in Amherst under the firm name of Chambers & Douglas. This firm continues to do business in the same stand under the well known name of Douglas & Company. The present partners are Walter Wood, H. N. Stevens and J. H. Douglas, the latter a grandson of the founder. Starting as a general store and now confined to wholesale and retail hardware, this establishment has through all these years preserved an honorable record and is doing an excellent business.



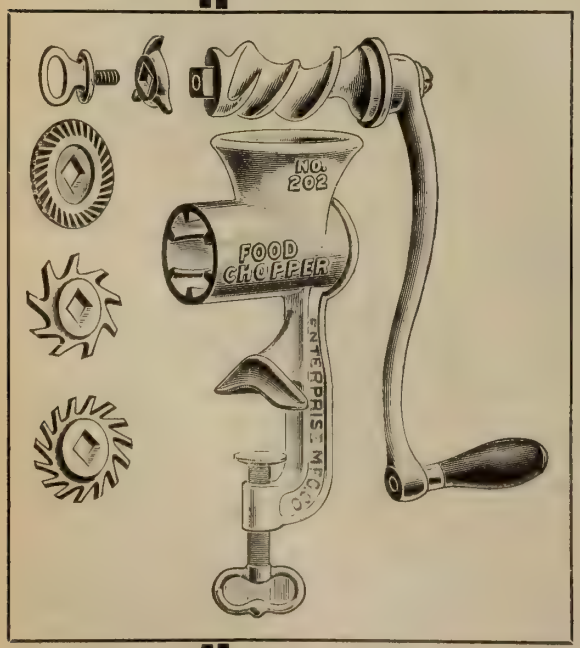
* * *

The cargo of the steamer Dahomey on her recent trip from Sydney to Montreal consisted of fifteen hundred and fifty-six tons of steel rails, one hundred and two tons of cement and fifty-seven tons of pitch, the shippers being the Dominion Iron & Steel Co., the Sydney Cement Company and the Dominion Tar & Chemical Company respectively.

* * *

At a meeting of the ratepayers of Amherst to consider the question of permanent streets the report of the committee appointed sometime ago in favor of the tender of the Warren Bitulithic Pavement Co., was received and adopted. The price is $2.75 per square yard. The present expenditure will be about $40,000. The town is also extending the

ENTER



Surprising, how many people have it on their minds to buy an **Enterprise Food Chopper.**

They've seen the advertising in the magazines, in their mail and in cook books and booklets.

They want an **Enterprise Food Chopper,** have decided to buy one, and they will buy at the first opportunity—***of the dealer who reminds them of it.***

This is your opportunity. Show the goods. Hang up our metal lithographed display. Treat your customers to our book of famous old recipes, "The Enterprising Housekeeper" and the business-bringing booklet, "The Cook, Her Critic and . . . ." ***Advertising at our expense.***

Order from your jobber the new number, No. 202. Thoroughly tinned; has four knives for cutting everything from nut butter to hash; phosphor-bronze bearings.

Write us direct for advertising matter..

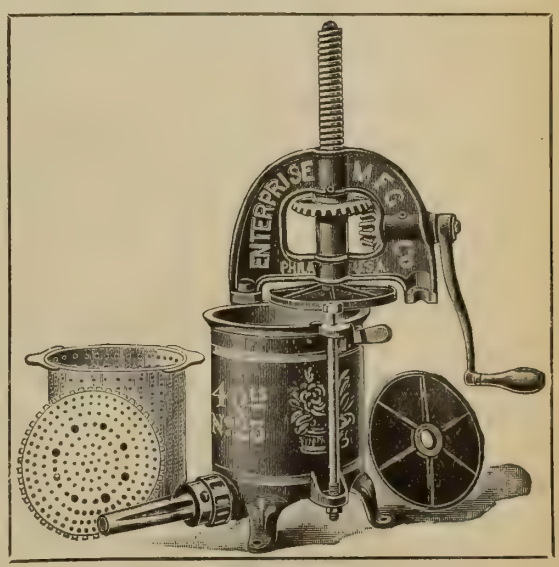
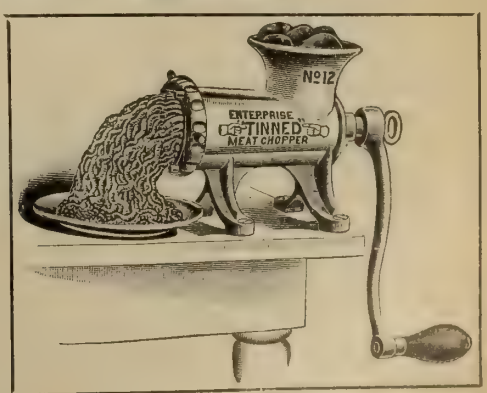
P R I S E



Just glance through the 1906 edition of the Enterprise catalogue and see if you are doing all the business you should with **Meat and Food Choppers.**

From the small family size, at $2.00, up to a fifteen horse-power electrically-driven Chopper, we can furnish a "knife and plate" Chopper for every possible use.

These are the choppers that first introduced a perfect method of chopping and they have remained for years without serious competition.



They are the only choppers that cut perfectly every tendon and piece of gristle.

The popular sizes, Nos. 5, 10 and 20, have a wonderfully quick sale to families, boarding houses, hotels and institutions.

The Enterprise Sausage Stuffer, Lard and Fruit Press is bristling with good points and patented features that make it the quickest selling and most satisfactory machine on the market. Are you posted on it, stocked, and prepared with advertising matter to push it ?

If you haven't the catalogue, write

Hardware and Metal Conditions in Manitoba

(Market quotations corrected by telegraph up to 12 a.m. Friday, Aug 31, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

Business continues active and values are steady. Money is reported "tight."

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE — We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02· 12. $3.10: 13, $3.20: 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ¼ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅜ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅝ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅝ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows· Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ⅜, $4.10; ¼, $7.20; ⅝, $4.60; ½, $4.30: ¾, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—Discount on "Irwin" bits is 47 1-2 per cent., and on other lines 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES—As noted last week, the price is now 1 1-2c. per lb. A decline of 1-4c.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

CLEVISES—Price is now 6 1-2c. per pound.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discount is 50 per cent.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Quoted now at 4c per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC.—Business is active as the shooting season is close at hand. We quote as follows: Cartridges, Dominion R. F., 50 and 5; Dominion, C. F., pistol, 30; military, 20; American R. F., 33½; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.25; chilled, $7.75; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—Prices are: Bar iron (basis), $2.50; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50: tool steel, Black Diamond, 100 lbs., $9.50; Jesson. $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—Prices are very firm. $5.25 per cwt. with a reduction of 25c. per cwt. on ton orders.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are quoted as follows: Silver Star, per gal., 21c.; Sunlight, 22c.; Eocene, 24c.; Pennoline, 25c.; Crystal Spray, 24c.; Silver Light, 22c.; gasoline, 70-72 (engine), 25½c., in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE —We quote: White lead, pure, $7; bladder putty, in bbls., 2½c.; in kegs, 3½c.; turpentine, pure, in barrels, 97c.; less than barrel lots, 92c.; linseed oil, raw, 64c.; boiled, 67c.

WINDOW GLASS—We quote: 16-oz.

O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40. 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4.00; 26 to 40, $4.52; 41 to 50, $4.75; 50 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75; 91 to 95, $17.30.

—

PROBLEMS IN THE PRODUCTION.

The commercial problems arising out of the increasing demand for tin are attracting a good deal of attention both in the United States and Europe. "Although part of the advance in the price of tin which has been witnessed lately has been due," says a bulletin of the United States Department of Commerce and Labor, "to speculative operations, much has been genuine, and has been

G. F. STEPHENS & CO., LIMITED, - WINNIPEG, CANADA

caused by rapidly increasing consumption. In 1880 the world produced 38,000 tons of tin and in 1890, 55,000 tons. In 1900 the production exceeded 80,000 tons and for the past five years has averaged more than 90,000 tons. At the present time 50 per cent. of the world's output comes from the Federated Malay States, 17 per cent. from Bolivia, 15 per cent. from the Dutch East Indies, 6 per cent. from Australia, 5 per cent. from Wales, and 7 per cent. from other countries.

"Experience has proved that largely increased quantities of copper and tin are required. The fact that gold production throughout the world has trebled within the last fifteen years naturally tends to heighten the prices of metal in general and indicates that the high prices are not merely temporary. The consumption of copper will not fall off, or of tin either. The production of copper is expected to increase, but with tin there is not the same prospect unless the discoveries in Alaska should reveal a new field from which to obtain tin. The fact that 50 per cent. of the product now comes from the Malay states, and that the labor question is becoming more difficult there, has some effect on the price. Recently the cultivation of coffee and rubber has been successfully established in some parts of the Malay states which were formerly considered good tin districts. It does not appear that the Straits production of tin can increase in the future as it has done in the past twenty years, and it is even doubtful whether the present output can be kept up. The production of Bolivia has increased of late, and in a smaller degree Australia may likewise yield larger quantities of tin.

"The African tin fields, so systematically and thoroughly 'boomed' during the past year, are pronounced by the London Times a failure, and no other new deposits have been reported. Tin mining in Great Britain has dwindled to very small proportions. The output of the Cornish mines aggregated 10,200 tons in 1870, which had fallen in 1904 to 4,200 tons."

British Columbia Trade News

Vancouver, B.C., Aug. 24, 1906.

Towing large rafts of logs on the ocean has been familiar to the public for a number of years, through the efforts in that direction of Capt. H. R. Robertson, who is the originator of the idea. Several unsuccessful attempts some years ago were followed by better luck, and large rafts have been taken from the northern coast states to California.

Capt. Robertson, who is manager of the Robertson Raft Co., of Portland, Oregon, is now in British Columbia in connection with the establishment of a company here for the purpose of taking logs to Panama. He first took the matter up in this province a year ago, and now has brought things to a stage where he has a company formed and the project is practically established. Two large ocean-going tugs are being built on the Atlantic Coast and will be brought round the Horn early next year to be employed in the enterprise.

Contracts for logs and piling in connection with the Panama Canal have been secured and the field for the rafting business is thus open. As it is necessary to assemble the logs in fresh water, the Fraser River has been chosen as the location for the yards where the rafts will be built. Several sites are available but none have been chosen yet. Rafts containing fifteen million feet have been successfully towed from the Columbia River to California by Capt. Robertson's Portland company. The tugs being built have specially devised towing apparatus to handle the enormous weight of the rafts. Capt. Robertson, the originator of the scheme, is a Canadian, a Nova Scotian by birth.

* * *

An addition to the waterworks supply system of Vancouver city is being made by laying another main under the Narrows—the entrance to the harbor. The city's water supply is taken from Capilano River across Burrard Inlet, and all four mains under the Narrows will now be in service to bring the water into the city. Last year a main was also laid. These mains are specially constructed of ball-jointed iron pipe. The distance is over a third of a mile and the whole main has to be connected together on the shore and afterwards hauled across in one piece, cables being laid under the sea and a capstan on the opposite shore being used to slowly drag the pipe to place. The operation is an expensive and interesting one but has always been successfully accomplished.

* * *

Electric railway extensions of importance are being projected in the lower Fraser Valley and some of them will, if installed, mark the inauguration of long-distance electric lines in the province. The most important is the projected line up the Fraser to Chilliwack, a distance of 60 miles or more. This line will be on the south side of the river and will run all the way through a good farming and ranching district, which indeed is the general character of the whole section between the Fraser River and the international boundary as far east as Chilliwack. There are a number of prosperous settlements there already, but absence of any practical means of transportation, with exception of the river steamers, has always been a drawback to large settlements and to development of land.

The other projected line is from Eburne to New Westminster, on the north side of the Fraser River. This undertaking will be carried out by the C.P.R. which has a charter for a line, which will run either on the mainland from Royal city down the river or else on Lulu Island, practically to the seacoast, a distance of some fifteen miles. To make this project complete and really a long-distance line, it is proposed to connect with this line the New Westminster branch of the C.P.R. now running to Westminster Junction on the main line. The B. C. Electric Railway Co. would then take over and operate the line in the same manner as it now operates the C.P.R.'s Steveston line from Vancouver. Mr. J. Buntzen, of the B.C.E. Railway, and Mr. Marpole, of the C.P.R. have had conferences with Mayor Keary, of New Westminster, and the matter is to be taken up between Mr Buntzen, who is managing director of the B. C. Electric, and the president of the C.P.R.

* * *

A syndicate of Victoria business men has been formed for the purpose of shipping building stone and other materials to San Francisco. The syndicate controls recently discovered marble quarries on Nootka Sound, sandstone quarries on some of the islands of the Gulf of Georgia, a large lime plant, and some deposits of brick clay. Thus a very wide range can be covered by the project, which is likely to be carried out on very large scale.

* * *

The scaling of all logs cut on provincial lands under lease or license is being carried out by the recently appointed official scalers, and in addition to measurement it is now announced that a statement will also be furnished with the scale of each boom of logs, showing the percentage of each grade of logs. So far the new regulations have been working well, and while there was some opposition on the part of the mills at first, this has been withdrawn and the new system accepted. The Government pays the scalers instead of the mills and loggers as formerly. A small fee is charged for the scaling, and as the measurement is independent it is accepted by both buyer and seller of logs.

* * *

The expansion of the lumber industry in this province and its relative importance in the volume of trade may well be gauged by the cut of logs for the month of July, as reported by the provincial supervisor of log scalers, Andrew Haslam. He says that 20,000,000 feet of logs were scaled during the month by the scalers, and this of course only represents the cut on provincial lands. Estimating the cut on Dominion timber lands at 15,000,000 feet, the cut of logs in the coast districts would be 35,000,000 for the month, and add to that another 15,000,000 as a fair estimate of the cut for the month in the interior of the province, where many mills are operated, 50,000,000 feet would be the cut of logs in the province for the month of July.

The demand for lumber, both local and for shipment to the Northwest Territories shows no signs of abatement and even with the additional cutting capacity represented by several new mills, and increased machinery in others, the indications are that more large mills will have to be built to meet with the enormous and ever-growing demand for the famed B.C. fir and cedar lumber. It is noticeable this year that a very considerable proportion of hemlock logs is being marketed and cut into dimension timber, joists and studding. Formerly these logs were not taken out, but with changed conditions nothing is overlooked.

THE RIGHT USE OF ADVERTISING MATTER.

Many a dealer who is sure he ought to advertise his store more and better, but who is concerned over the question of expense, should realize that aggressive manufacturers of widely-advertised specialties offer him excellent advertising in return for the slight effort of distributing it.

Some dealers who are not buying automobiles, and who wonder how their competitors can buy them, have under the counter or down cellar, packages of expensive printed matter that would increase their sales if it reached the hands of the right people.

It is advertising matter of a good quality, much of it, full of force and selling arguments and well illustrated. If handled properly it would not only sell the article that it talks about, but would bring people to the store who would not otherwise come.

A case in point is the experience of dealers with a clever new booklet furnished by the Enterprise Manufacturing Co., of Pa., to promote sales of their line of household food choppers. Under the title of "The Cook, Her Critic, and ——" it gives valuable advice to young housekeepers and suggestive hints to older ones. Dealers are supplied free, and those who have made careful use of the booklet, putting copies into the right hands, have reaped a quick harvest of good sales.

The same company furnishes free copies for distribution, of their much-sought-for "Enterprising Housekeeper," which is held in high esteem because its recipes are economical and practical, unlike so many of the modern cook books.

If you are not getting the full benefit of these advertising aids write to the company and get them at work for your store.

THE MILK CAN STANDARD.

At the last session of parliament an Act was passed to make it imperative that all cans used for the purchase or sale of milk by dealers or others should be verified and stamped by a Dominion inspector of weights and measures and under the Weights and Measures Act. It always has been the law that such cans should be inspected and their correct measurements verified by a Government official, but this provision, if ever enforced, long ago fell into disuse. The amendment to this Act, which has received the Governor-General's assent, becomes law on Oct. 13, 1906, and those using cans not in accordance with the new regulations will be subject to a fine not exceeding $50, and have the cans confiscated. The tariff of fees for inspection of cans is as follows:

When a capacity of two gallons or under, a fee of 10 cents each.

When a capacity exceeding two gallons and not exceeding five gallons, a fee of 20 cents each.

Praulx & Paquin, plumbers, Montreal, have dissolved partnership.

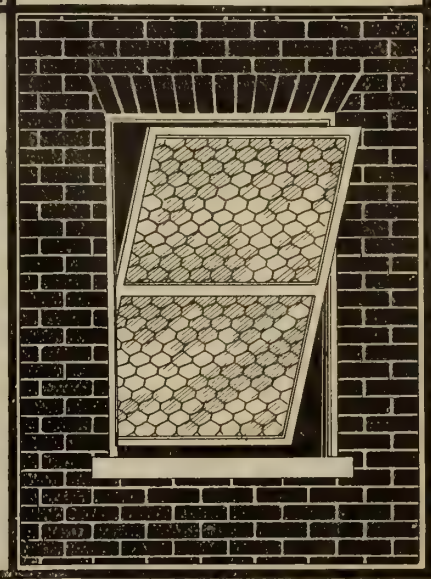
FIRE-PROOF GLASS WINDOWS THAT ARE FIRE-PROOF

These windows in a fire-proof building, complete the security, and in any building will thoroughly prevent the spread and advancement of the fiercest flames.

Better than iron shutters (even if they happened to be closed at the needed time); fire-proof glass remains intact, resisting both the intense heat of the fire and the action of water.

Many practical tests have proved it's efficiency.

Used in conjunction with our hollow sheet-metal frames and other fire-proof fittings, it gives the most perfect protection available.



It's adoption lessens insurance rates.

If you want to know more about "fire-proof windows," write us, it's an interesting subject.

CONTINENTAL RAILWAY CONTRACTS.

The following is a statement of the several contracts for material awarded by the commissioners of the Transcontinental Railway up to Aug. 1:

Dominion Iron & Steel Co., Sydney, N. S., 33,000 gross tons steel rails	$1,127,000
Nova Scotia Steel & Coal Co., New Glasgow, N.S., 1,217 gross tons splice bars	57,247
Gananoque Bolt Co., Gananoque, Ont., 310,000 lbs. track bolts and nuts	10,635
Toronto Bolt & Forging Co., Toronto, Ont., 202,800 lbs. track bolts and nuts	7,500
Peck Rolling Mills Co., Montreal 1,188,200 lbs. track spikes	29,705
Hamilton Steel & Iron Co., Hamilton, Ont., 729,000 lbs. track spikes	18,589
Toronto Bolt & Forging Co., Toronto, Ont., 728,900 lbs. track spikes	18,586
Montreal Rolling Mills Co., Montreal, 728,900 lbs. track spikes	18,563

THE STEEL OUTPUT DOUBLED.

The iron and steel bounty payments paid by the Dominion Government for the financial year up to July 1 amount to $2,004,339, as compared with $1,540,203 in 1905. The payments indicate a very large increase in the output of the Canadian iron and steel industries.

Bounty amounting to $687,631 was paid on a total output of 581,858 tons of pig iron; of this, 86,523 tons was made from Canadian ore. The bounty on this was at the rate of $1.65, and totalled $142,263; 495,335 tons were made from foreign ore. The bounty on this was at the rate of $1.10, and totalled $544,868.

Last year's output of pig iron was 386,719 tons, of which 327,267 tons were made from foreign and 59,452 from Canadian ore. The rates of bounty were higher, however, last year, viz., $1.50 on foreign and $2.25 on Canadian ore, so the total amount paid as pig iron bounty, was $624,167, of which $490,401 was on foreign and $133,766 on Canadian ore.

Of steel ingots, 569,237 tons were made in the Canadian mills during the past year, as compared with 272,916 tons in 1905 The bounty in 1906 at the rate of $1.65 per ton, was $941,000. In 1905, at the rate of $2.25 per ton, it was $614,433. Of puddled bars, 3,560 tons were made in 1906, as compared with 3,509 tons the year before. The bounty at $1.65 per ton, this year, was $5,875. The payments last year at $2.25 per ton were $7,895.

The Government paid a bounty in 1906 of $369,832 on 72,875 tons of rolled angles, wire, rods, plates, etc. In 1905 the payments were $293,208, and the output 59,842 tons.

These iron and steel bounties expire next year unless they are renewed by parliament The bounty rate on pig iron from Canadian ore and on puddled bars and steel ingots this year is $1.05 per ton The rate on pig made from foreign ore is 70 cents a ton.

The lead bounty in 1906 totalled $90,197, as compared with $330,645 the year before, the rate of bounty being much lower on account of the higher price of lead in the world's markets.

The petroleum bounty, at the rate of 1 1-2 cents per gallon, showed payments amounting to $291,157, as compared with $350,047 in 1905.

There was also paid a bounty amounting to $15,079 in manila used in the manufacture of binder twine, as compared with $13,789. In 1906 the bounty was allowed on 4,423,300 lbs. of manila used in the manufacture of 8,617,457 lbs. of binder twine.

You Can Have a *Good Trade* or a *Poor Trade*. The Choice is Yours. It's a Matter of Selecting the *Right Line* or the *Wrong One*. We Offer You a *Good Trade* and the *Right Line*. Make Selection.

No dealer can afford to take chances on the line of paints and varnishes he handles. That he wants a line that will bring him good trade is a foregone conclusion. That he must have the right line to attain this is also a foregone conclusion. But from the lines some dealers carry and the poor trade they seem to be content with, this does not appear to be always true. It is, nevertheless.

The Sherwin-Williams Line is the *right line* for any dealer, because it gets *good trade* and keeps it. It is a line that never fails to give satisfaction. Every paint and varnish in it is made just as good as these products can be made. It has a standard of excellence even higher than seems necessary—and it maintains it. You can appreciate, perhaps, what this means.

But even the best line made would not sell if it was not properly pushed—if attention was not called to its merits over other lines. So we not only make the best paints and varnishes, but we put behind them the best advertising helps as well. We give the dealer our co-operation in introducing the goods, in getting sales, in securing the business of his vicinity. With his assistance, such co-operation soon builds up good trade, for our advertising sells goods and our goods give the kind of satisfaction that makes return sales.

Here is the matter concisely presented. If you are thinking of putting in a line of paints and varnishes, or if you have a poor trade now, let your best business judgment counsel you. It's ***The S-W. Line*** or "the others." We shall be glad to serve you.

THE SHERWIN-WILLIAMS CO., PAINT AND VARNISH MAKERS.

PAINT, OIL AND BRUSH TRADES

IS PAINTER'S COLIC A MYTH?

In 1903 the French Senate appointed a committee of scientific men to investigate the effects of white lead upon the health of journeymen painters. The committee has just reported that it has made a careful investigation of the subject in eighty-six of the eighty-eight departments into which France is divided, extending its inquiries even into Algeria. According to this report, out of 194 journeymen painters who were in the hospitals of France in 1904 only twenty-seven were sick from diseases originating from their trade. "If this number were double," says the report, "we are still very far from the ravages which have been attributed to the use of white lead." The committee has not been able to discover any evidence of the excessive mortality which was reported to prevail in this business. The death rate among house painters is very low, averaging only one in every 7,000 or 8,000 journeymen.

PRICE AND PRODUCTION OF ARSENIC.

The domestic prices for arsenic are based on the fluctuations in the English market, and for the sulphides and chemical compounds on the quotations ruling in Germany. During 1905 the American market showed sales of white arsenic at $2\frac{3}{4}$ to $4\frac{3}{8}$ cents per pound, according to brand. The best prices were realized in the last quarter of the year, when supplies were curtailed by the scarcity of mispickel and by difficulties experienced in mining abroad. Red arsenic, imported largely from Germany, brought $6\frac{3}{8}$ to $7\frac{1}{2}$ cents per pound at New York.

A noteworthy feature of the industry has been the growth in the production of Spain, a country which shipped to the United States in 1905 approximately 1,750 short tons of white arsenic, guaranteed 99.8 per cent. of arsenious oxide. The largest producer of metallic arsenic and arsenious oxide in the world is Germany, by far outclassing Great Britain, which until 1902 held first place among the producing countries. Hopes are entertained that Canada may become an important producer with the development of its new deposits of mispickel in Ontario. As far as the United States, there are signs that the domestic production of arsenic will show marked expansion in the near future.

The greatest demand for arsenic is from manufacturers of paris green, which is an aceto-arsenite of copper, worth 12 cents per pound at New York. It is used as a pigment, and its poisonous character, while restricting its employment for this purpose, makes it an admirable insecticide in agriculture. It has been often suggested that the silver-lead smelters and refiners who produce appreciable quantities of copper sulphate and can recover arsenic in roasting speiss, should undertake the manufacture of paris green.

Arsenic also forms colors in yellow, red and grey, which find a ready sale. In medicine arsenic is used with fevers, rheumatism, some nervous affections, and also as a tonic. A saturated solution of arsenic is recognized as a good wood preserver, and it is also employed as a sheep dip for the purpose of killing parasites which settle in the wool. Weeds are also killed by using an arsenate salt. Hides to be dressed for leather are preserved against the infection of insects by a sprinkling of arsenic. As a conveyor or fixer of aniline colors in calico printing, white arsenic has unique value. It is also utilized, but to a smaller extent, in the manufacture of certain kinds of glassware and of high grade enamels.—Paint, Oil and Drug Review.

ADULTERATED RED LEAD.

The Oil and Colorman's Journal, London, England, advises users of red lead to test somewhat carefully for purity red lead which they purchase as "genuine," as there appears to be a good deal of adulterated stuff on the market at the present time. Of course, if a buyer asks for genuine red lead and gets a material containing barytes, red earth, ground glass, or any of the usual adulterants of genuine red lead, his remedy is clear. What, however, is the position of the man who buys simply "red lead" at a price clearly under that of the current market value of the genuine article is a question on which it is not very safe to express an opinion. The purchaser, should he find his material adulterated, may plead that he is unaware of any arbitrary standard of price, and when he asks for red lead he expects to get that substance and nothing else. A certain merchant purchased a comparatively small quantity of "red lead" at 17s. 6d. per cwt. On analysis it was found to contain 15 per cent. of adulterant. The purchaser claimed that he was entitled to receive red lead and not a mixture of red lead and something else. The seller says that it is well understood in the trade that when sold at a price such as 17s. 6d., "red lead" is not guaranteed to consist wholly of red lead, but that he supplied the best he could for the price. The question is a somewhat important one, and opens up questions of considerable interest in the color trade.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 31, 1906.

Southern producers have issued new lists on turpentine, and Montreal dealers have increased their price to 87 cents. It is stated in explanation of the advancing market that large export shipments from the south to Europe have produced a scarcity in the supply. A very sharp jump in price occurred there, but local dealers have not taken full advantage of it at present. As soon as fresh supplies come in, bought at the new rate, another advance must take place.

Linseed oil is steady so far as quotations are concerned, and although the market is very firm, Montreal jobbers have not advanced prices.

Pigments generally have a higher tone. White lead is advancing and red lead has already gone higher in the Old Country. Green seal white zinc (V.M.) has also advanced, being now quoted £2 per ton, higher.

The local lead corroding works have closed down temporarily for repairs, taking advantage of the fact that the Trail smelter has also ceased shipments of pig lead for a time.

Makers of castor oil report that there has been a very good demand, and the output of second quality is now sold for months ahead. Accordingly the price for seconds has advanced.

LINSEED OIL — Prices have been steadily held since our last report, and we are still quoting: Raw, 1 to 4 barrels, 52c.; 5 to 9 barrels, 51c.; boiled, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.

TURPENTINE—From present indications figures will soon be advanced by the Montreal dealers. Our quotations are as follows: Single bbl. 87c. per gal.; two barrels or over, 86c. per gal; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC— The market remains unchanged at following prices: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD—Conditions are unchanged since last report. Prices remain as follows: Genuine red lead in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

GUM SHELLAC—Prices remain unchanged as follows: Fine orange, 60c. per lb.; med. orange, 55c. per lb.; bleached shellac (white) 65c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—Importers have advanced prices on seconds, and jobbers' prices are firmer. We still quote, however: Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

GASOLINE—The ruling quotation at present is 24c. in bbls.

BENZINE—There is nothing new this week and we are still quoting 20 1-4c in barrels.

WINDOW GLASS—The retail business is large and many repeat orders are being sent in. We quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.95; third break, 100 feet, $4.25; fourth break, 100 feet, $4.50; fifth break, 100 feet, $4.75; sixth break, 100 feet, $5.25; seventh break, 100 feet, $5.75; eighth break, 100 feet, $6. Diamond star, first break, 50 feet, $2.05; second break, 50 feet, $2.25; first break, 100 feet, $3.90; second break, 100 feet, $4.30; third break, 100 feet, $5.25; fourth break, 100 feet, $6; fifth break, 100 feet, $7; sixth break 100 feet, $7.50; seventh break, 100 feet, $8.50. Double thick, first break, 50 feet, $3.20; second break, 50 feet, $3.50; first break, 100 feet, $6.25; second break, 100 feet, $6.50; third break, 100 feet, $8.25; fourth break, 100 feet, $9.50; fifth break, 100 feet, $11; sixth break, 100 feet, $12; seventh break, 100 feet, $13.50; eighth break, 100 feet, $16; ninth break, 100 feet, $17.50; tenth break, 100 feet, $19.50; eleventh break, 100 feet, $23.50; twelfth break, 100 feet, $28.

THE PROBLEM SETTLED

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, Aug 31, 1896

Still another advance of two cents has been made on turpentine and even at the advanced price contracts for future delivery are being refused in the south. Linseed oil holds at the same figure, although the market is weakening somewhat. White lead is very firm and not likely to come down any despite the fact that $5.60 for pure white lead has been quoted by one house. Most jobbers and retailers think it a joke to offer pure white lead at $5.60 with pig lead selling at $5.90.

Business shows a little easing off but it is still good and no one is complaining.

Crude petroleum has been dropping for some time, this week showing a further decline of two cents.

WHITE LEAD — Ex Toronto, pure white, $6.30; No. 1, $5.92 1-2; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; 1-2c. per pound extra will be charged for 12 1-2 pound packages; genuine dry white lead in casks, $5.40.

RED LEAD—Genuine in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.60; No. 1 in casks of 500 lbs., $5.50; ditto, in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c.; in 100 lbs., 7 1-2c.; No. 1, in casks, 6c.; in 100 lbs., 6 1-2c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c.; in 12 1-2 lbs., 8 1-2c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 90c. per gallon.

PARIS WHITE—90c. to $1 per 100 lbs.

WHITING—60c. to $1 per 100 lbs. Gilders' whiting, 75c.

PARIS GREEN — Canadian Government standard, 600-lb. berrals, 19 1-4c.; 25-lb. drums, 20 1-2c.; 1-lb. packages, 21c.; 1-2 lb. packages, 23c.

SHELLAC VARNISH—Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange) $2.25.

LINSEED OIL—Our quotations are: Raw, 1 to 4 barrels, 57c.; 5 to 9 barrels, 55c.; boiled. 1 to 4 barrels, 60c.; 5 to 9 barrels, 58c. Toronto, Hamilton, London and Guelph; net 30 days. Advance of 2c. for delivery to outside points.

TURPENTINE—Single barrels, 91c.; 2 to 4 barrels, 90c., f.o.b. point of shipment, net 30 days. Less than barrels, 96c. per gallon.

GLUES—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2c. to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c. per lb.; No. 1 American white, 15c. per lb.

PUTTY—Ordinary, bladders in barrels, $1.80; pure linseed oil, $2 to $2.10; bulk, in 800-lb. casks, $1.50; pure, $1.95 to $2; 100-lb. kegs, 25c. extra.

LIQUID PAINTS—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.

CASTOR OIL— English, in cases, 9 1-2c. to 10c. per lb., and 11c. for single tins.

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM— We quote: Canadian, $1.32; Pennsylvania, $1.58; Ohio, 96c.

MACHINERY FOR FRANCIS-FROST COMPANY.

W. G. Francis, of the Francis-Frost Co., Toronto, has just returned from a business trip to New York.

He was in quest of new machinery for their Toronto Junction plant, which will be running in a few months. This plant will be fitted up with the latest designs in mills and mixers for the manufacture of mixed paints and colors in oil and Japan. Mr. Francis also ordered the necessary machinery for the manufacture of Muresco wall finish, which will hereafter be made in Canada. The Francis-Frost Co. are Canadian agents for this finish, but the demand has increased so rapidly that they have found it necessary to arrange to make it here.

FLAX SEED STATISTICS.

In the tabulation showing the world's flaxseed crop the total for 1904, the latest year for which figures are available, is given as 105,778,000 bushels, and of this the United States produced 23,401,000 bushels, or more than one-fifth. America, which includes the United States, Manitoba, Mexico and Argentina, is credited with 60,922,000 bushels, which is close to 60 per cent. of the world's production. The seed crop of the world is increasing. In 1902 it was 83 million bushels, in 1903, 100 million, and in 1904, 105 million. Seed prices have declined as the production has increased. In 1901 the range at Chicago was from $1.38 to $1.90; in 1902 it was from $1.11 to $1.80; in 1903 from 89c. to $1.24; in 1901 from 97c. to $1.28; in 1905 from 92c. to $1.47.—Paint, Oil and Drug Review.

WOOD PRESERVING PAINT.

C. A. Lundquist, Moscow, Idaho, has a new invention relating to paints used for coating various substances. It forms a hard coat of a character resembling that of cement, and it preserves wood or other surface from the action of rain or sunshine. It does not crack or peel off in the manner of paints of other kinds, and will stand for any length of time in any sort of weather.

BARGAINS IN HARDWARE SHELVING

We have made up two sections of shelving suitable for a hardware Store, also some Screw Cabinets for our exhibit at Toronto Exhibition, we do not wish to move these back to our factory and, are therefore, offering them practically at cost.

Both Shelving and Cabinets are specially well made as we were anxious to show the trade how attractive a Hardware Store could be made and how much time could be saved by adopting the most up-to-date system.

If shelving described below is too small we could build additional sections to match.

We guarantee shelving and shelf boxes to be exactly as described and any dealer intending to refit his store should not miss these bargains.

1. Shelving 16 feet long, 8 feet wide and 12 inches from front to back, fitted with 138 Bennet Steel Shelf Boxes. Sizes as follows: 110 boxes 6x6, 12 boxes 6x10, 8 boxes 6x15, 4 boxes 6x18, 4 boxes 6x12. There is a saw case in middle of section 60 inches wide and 47 inches deep. This case has sliding glass doors. Each shelf box has "Lip" which fits tightly against shelf above and each box is fitted with nickel pull. All exposed wood is oak, golden oak finish. There is a very attractive 8-inch cornice which sets off the shelf. Net price $185.

2. Shelving 11 feet long, 8 feet high and 12 inches from front to back, fitted with 243 Bennet Steel Shelf Boxes. Size as follows: 20 boxes 3x3, 70 boxes 6x3, 72 boxes 5x3, 12 boxes 10x3, 12 boxes 15x3, 4 boxes 15x6, 6 boxes 10x6, 35 boxes 6x6, 12 boxes 5x6. This section is equally as well made as the above but has no saw case and has Green Oak Finish. Boxes are made without "Lip." Price $140.

3. Dust-proof Screw Cabinet containing 105 Bennet Steel Boxes, Cabinet is 53 inches high, 39 inches wide and 12 inches deep, and has steel back which keeps out the dust and prevents warping. All boxes have "Lip" and are fitted with brass pulls and card clip. This case is dust-proof, made of oak, Golden Oak Finish. Price $25.00.

4. Dust-proof Screw Cases containing 83 Bennet Steel Boxes. This Cabinet is equally as well-made as the above but is only 43 inches high, 33 inches wide, 8 inches deep, made of oak, rich antique finish. Price $17.50.

Order by telegram. You are taking no chances as we guarantee satisfaction. No charge for crating or packing.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

The Canada Cycle & Motor Company will extend their plant at Toronto Junction.

The Great Lakes Navigation Company will build a $50,000 shipbuilding plant at Fort William.

G. A. Greir, of Montreal, has purchased timber berth No. 9 on the Kippewa River for $145,000.

Waterloo, Ont., has carried a by-law to spend $5,000 for a third storage tank for their waterworks system.

Officials of the Bank of Toronto are making a trip through the west with a view to opening several new branches.

Eighteen houses were damaged at Deseronto, Ont., by a fire which originated at the Rathbun Company's plant.

Port Colborne, Ont., residents have carried a by-law giving concessions to the Great Lakes Portland Cement Company.

Welland, Ont., citizens have passed a by-law granting concessions to the Iroquois Motor Car Manufacturing Company.

The Sage Storm Front Company, of Rosini, Ohio, has started a factory in St. Thomas for the manufacture of buggy coverings.

Waterloo, Ont., has passed a by-law to loan the Interior Hardwood Furnishings Company $10,000 without interest, repayable in ten years.

G. E. Bradshaw, of Toronto, representing an American company, is seeking franchises in Galt and other towns to establish central heat transmitting systems.

Prince Albert council will submit a by-law to grant $25,000 to the C.N.R. for the purpose of assisting in the building of a traffic bridge across the Saskatchewan.

The Waterloo Manufacturing Company have announced their intention of building a storehouse and factory at Portage La Prairie if they can get tax exemption for twelve years.

The Multi Scale Co., of Guelph, who have recently been incorporated, will engage in the manufacture of what is known as the multi scale. They also purpose making castings of all kinds, and the smaller parts of agricultural and other machinery.

A by-law will be submitted to the residents of Hastings, Ont., asking them to give a bonus of $5,000 and tax exemption for ten years to the Peterborough Boiler & Radiator Company, who will establish a plant to cost $75,000, and employ 25 hands.

The Canadian Steel Construction Company have been incorporated under Ontario charter with a share capital of $50,000 for the purpose of manufacturing and dealing in steel tanks, machinery, engines, etc. The provisional directors are W. J. Lethbridge, D. S. Storey and F. W. Grant, with head offices at Midland.

The Niagara Falls Heating & Supply Company have been incorporated under Ontario charter with a share capital of $50,000 for the purpose of manufacturing and dealing in furnaces and boilers and plumbers' and tinners' supplies. The provisional directors are Hy. Williams, O. D'A. Glasgow, W. L. Doran, R. P. Slater, F. E. Dalton and D. B. White with head office at Niagara Falls.

It is reported that the Canadian Pacific Company has decided to await the outcome of experiments by the New York Central and New York, New Haven & Hartford Railway Companies before taking steps for the electrification of any part of its system. Both the latter railways are spending enormous sums upon experiments, the former with a direct and the latter with a single-phase alternating current. The line from Montreal to Quebec will in all probability witness the first installation. All the electric power necessary can be obtained from the Shawinigan Falls.

BUILDING NOTES.

Wallaceburg, Ont., is about to build a Carnegie library.

Plans for the Edmonton Y. M. C. A. have been accepted.

Councillor Cook, of Port Arthur, will build a business block.

Brantford building permits have exceeded $300,000 this year.

Montreal's building permits amount to $5,782,323 up to 23rd of August.

Mrs. E. Charlston, Vancouver, will build a three-storey apartment house.

The town of Bracebridge, Ont., calls for tenders for a new library building.

A. J. Small, of Toronto, will erect a new theatre in Brantford at a cost of $45,000.

The Credit Foncier Company, of Edmonton, will build a three-storey business block.

Frederick Mossop will build a six-storey hotel on Yonge street, Toronto, to cost $100,000.

Avenue Road Presbyterians, Toronto, have applied for a permit to build a church to cost $45,000.

The Imperial Oil Company will build a warehouse at Portage La Prairie. A new union station is also to be built at that town.

The contract for the construction of the big grain elevator at Port Colborne, Ont., has been awarded to Peter Lyall & Sons, of Montreal.

It is reported that James Davidson and A. E. Dyment will erect a $60,000 apartment house and a $70,000 vaudeville theatre in Ottawa.

What Is Your Idea of a Good Boiler?

Do you want one that will **really** save fuel?

Do you want one that is tight when it is set up, and (having no rubber gasket joints) will always stay tight?

Do you want one that will delight your customer and thus bring his order for other goods?

Do you want one that will circulate while the old-fashioned kind is getting ready?

Do you want one that will run forty-eight hours without any attention?

Do you want one that will **burn all the coal** and leave not an ash to sift?

Then you **must** want a

Pease Economy Boiler

There is not another kind on this green earth that can fulfil this specification.

Don't forget the visit to be made in the next six days at 36-38 Queen St. East, or at our exhibit in the Stove Building.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Amherst Heating Goods.

The Amherst Foundry Company's catalogue No. 5 is one that shows a most extensive range of furnaces, stoves and ranges. The products of this long established company need little commendation as they have been in use for many years throughout Canada, but a look through their new catalogue shows many new designs, and the most approved devices in the heating trades. A copy will be sent on application.

The Ross Rifle.

Undoubtedly, one of the most elaborately designed catalogues ever issued by a Canadian business house is that of the Ross Rifle Company, Quebec. Printed on heavy coated paper throughout, its appearance is enhanced by a beautiful cover on which are embossed the words "The Ross Rifle," and, also in colors, the Dominion coat-of-arms. The book contains 29 pages, size 9 by 12 inches, and the reading matter is most interesting, comprising as it does a brief historical sketch of Quebec City as well as a full description of the Ross rifle. The illustrations, which are numerous and of high quality, include views of Quebec and vicinity, and also drawings of the various working parts of the rifle manufactured by the firm.

THE SNOWSHOE INDUSTRY.

The snowshoe industry is one which remains pretty well in the primitive state it has occupied since the early days of Canada, in so far as the mode of manufacture is concerned. Nearly all the snowshoes used in Canada are still made by Indians and halfbreeds in their own humble homes in the villages in Quebec Province. There may be found large Indian families manufacturing and shipping shoes year after year. Casual visitors might walk through the streets and never see a sign of manufacturing, for there are no factories—no concerted or co-operative work. The Indian and the half-breed disdain the workshop and its monotonous regularity, and will work only when they need the money, and in the privacy of their own homes.

The large hardware and sporting goods jobbing houses have their own sources of supply from different tribes and Indian villages. Holt. Renfrew & Co., wholesale furriers, Toronto and Quebec, for instance, handle practically all the output of the village of Lorette, near Quebec City. They supply the villagers with the material—hides, wood, etc., and upon completion, collect the manufactured articles. The men do the heavier work such as shaping the wood, while the women and children do the lacing.

In the older towns and cities snowshoes are generally associated with sport, but the commercial use of the snowshoe by surveyors, bushmen and trappers is a large part of the industry. Last Winter there was some falling off in the number used owing to the mild weather, but there still were a sufficient number used to make it difficult to keep up a steady supply.

Snowshoeing is an exhilarating sport and one that can well be made profitable to the hardwareman when there is the usual quantity of snow. The writer knows of one case, and there are no doubt others, where a window neatly arranged with snowshoes and moccasins was the means of a snowshoe club organizing, which otherwise would not have been formed. The sight of them suggested life, outdoor exercise and adventure. There is no reason why this result could not be obtained by a great many hardwaremen if an effort were made to enthuse the young folks, and older folks, too, by making a club offer or some special inducement to buy a quantity. Snowshoes make a paying side line for Winter trade in retail hardware stores if the Winter has an average snowfall. The past few years have seen a steady growth of popularity of snowshoeing as a sport.

Prices for the coming Winter are still rather indefinite, but quotations will be considerably higher on account of the increased cost of hides. Tanners are advancing prices on all kinds of leather goods, this including material for shoe packs and moccasins as well as for snowshoes. Cow hides are used in shoe packs while elk and buck skin is used almost exclusively for moccasins and snowshoes. "With leather going up, prices on all these lines are likely to be from 10 to 15 per cent. higher this Winter than last," said a well informed sporting goods man to Hardware and Metal

DEATH OF DANIEL B. WESSON.

After a long illness Daniel Baird Wesson, the rifle and revolver maker, died at Springfield, Mass., on August 4. Born in Worcester, Mass., Mr. Wesson was the founder of the firm of Smith & Wesson. He went to Springfield a poor man, but died immensely wealthy. He was the inventor of the cartridge with a percussion cap. In 1883 he formed a partnership with Horace Smith, of Norwich, Conn., and there worked out the principles of the Winchester rifle. He first put into use the self-primed metallic cartridge, used during the civil war. About the same time he succeeded in perfecting a revolver, the principal feature of which was that the chambers ran entirely through the cylinder. Mr. Wesson was also the inventor of several other improvements in firearms, the most important of which were the automatic cartridge shell extractor and the self-lubricating cartridge. He also introduced the hammerless safety revolver.

CHEMISTRY IN MANUFACTURE.

Chemistry plays a very important part in manufacture to-day, says an exchange. Many of the best mills have their iron and steel regularly tested chemically by experts, and not left as much to guesswork as formerly. Flour mills are realizing the importance of this novelty, and many have laboratories of their own, or millers who understand testing. Other manufacturers are resorting to chemical analysis of their goods also.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

BUSINESS CHANCES

$3,000 will buy a good hardware, plumbing and heating business in the prosperous city of Sherbrooke. Owner wishes to retire. Apply Box 107, Sherbrooke, Que. [tf]

HERE is what you want—a tinsmithing and plumbing business in sunny Alberta town, with 1,200 population; no opposition; $3,000 will handle business; lot and building 14 x 36; last year's business $8,000; act quick, good reason for selling. Address, S. Case, HARDWARE AND METAL, Winnipeg. [35]

WELL selected stock of hardware, stoves, tinware, tinshop tools, etc. In first-class section of Ontario. Good reasons for selling. Stock about $4,000. Apply Box 549, HARDWARE AND METAL, Toronto. [39]

SITUATIONS VACANT

FURNACE MEN WANTED — Highest wages are offered to competent furnace men in the largest cities in the west; also splendid openings for mechanics with a general knowledge of steam fitting and furnace work. Apply to The Pease-Waldon Co., Limited, Winnipeg, Man.

HARDWARE salesman wanted, one who thoroughly understands hardware, must be good stock keeper and window dresser, state age, experience and salary required. Box 548, HARDWARE AND METAL Toronto. [34]

WANTED—Hardware salesman with about four years' experience. Write at once with references. Good position for the right man. Apply to The Bond Hardware Co., Limited, Guelph, Ont. [34]

WANTED--Capable young man with fair knowledge of mechanics and good appearance as city traveller in Winnipeg. Good position for right man. Box 57, HARDWARE AND METAL, Winnipeg. [35]

WANTED tinsmith with knowledge of furnace work; single man preferred; will pay good wages; steady position to right man. Box 552, HARDWARE AND METAL, TORONTO. [34]

SITUATIONS WANTED

WANTED—A position as traveling salesman by young man with thorough knowledge of hardware. Now employed on the road. Eastern territory preferred. Box 47, HARDWARE AND METAL, Winnipeg.

WANTED—Position as salesman or Traveller in hardware lines, carriage goods or paints (manufacturing or general wholesale). Age now 47; thirty years experience as traveller, retailing and jobbing, have travelled all over Canada; good references. Apply to HARDWARE AND METAL. [37]

WANTED—First-class tinsmith, must understand furnace work, steady job to right man. Aoply stating age, experience and salary expected. Bandman preferred. Good town in Alberta. Box 553, HARDWARE AND METAL, Toronto.

WANTED position in west by retail hardwareman; eight year's experience; general and builders' hardware, stoves, etc.; understands ad. writing and window dressing; can give best reference. Address 544, HARDWARE AND METAL, Winnipeg. [36]

See That Plate?

ISN'T IT A BEAUTY?

That's only one of the seventy-five perfect pieces which make up our beautiful Louis XIV Classification.

Every piece is of the same harmonious design. Many patterns and arrangements to suit all ceilings and tastes.

Every piece fits. A pleasure to erect.

Better try us—if you haven't already joined the happy throng.

We make a full and complete line of

ROOFING, SIDING, CORNICES, SKYLIGHTS, etc.

PLATE No. 1,000, 24"x24" and 24"x48"

The GALT ART METAL CO., Limited, GALT, ONT.

Western Distributing Agents, THE McCLARY MFG. CO., Winnipeg and Calgary.

Think of These Prices!

$2.00, $2.50, $3.50

Model No. 15, Hamilton Rifle, sells at $2.00
Model No. 19 sells at $2.50
Model No. 23 sells at $3.50

These rifles are worth ten times these amounts, but because we have patents exclusively our own, and manufacture by processes that obviate unnecessary expenses. We are able to place these rifles in your hands at a very low figure, and you are able to sell them at the above prices and make good profits for yourself.

SPEAK TO THE JOBBER THIS DAY

PLUMBING AND STEAMFITTING

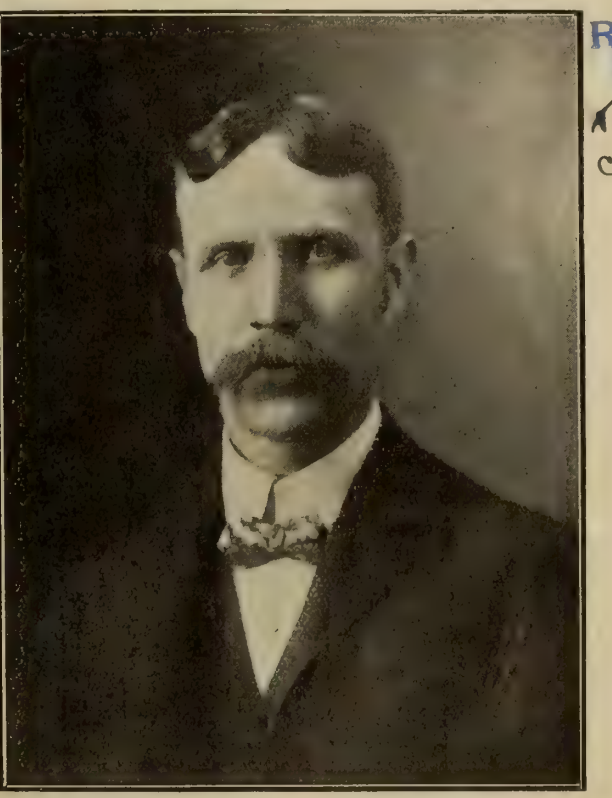
IMPORTANCE OF TESTING SEWERS

Educational discussions on trade topics are conducted weekly by the Cleveland Master Plumbers' Association and the members are greatly benefited not only by the discussions, but by the issuance of the conclusions arrived at in bulletin form. A recent topic discussed was that of tests of sewers, the bulletin on this subject reading as follows:

"The term sewer gas is used throughout this bulletin as being the generally accepted term applied to that deleterious emanation from the sewer which causes sickness, disease and death.

"The modern city of to-day would not be possible were it not for the fact that the art of plumbing has kept pace with the progress of the times. There is to-day absolutely no excuse for sickness or disease arising from the presence of plumbing fixtures in the home, provided they are put in according to the latest and most approved methods and properly taken care of and kept in repair. The intelligent master plumber is conscious of the fact that the health, and consequently the happiness and wealth of the occupants of the homes where he is called to place the plumbing fixtures is in his hands and he will take every precaution to secure his client against the presence of sewer gas in the home and from any annoyance or damage from the water service. His client, on the other hand, should be willing to give him a fair remuneration for this service and not expect him to perform this service for the same price that some incompetent and unscrupulous man offers to do it for, who has only a thought for the immediate material advantage, and no adequate conception of his responsibility. That this is too often done is proved by the experience of many of our members. Nor is the supervision which the board of health is supposed to exercise over the drainage system of the house sufficient to guard entirely from the effects of the operations of this class of men. Nor does this association wish to underrate in any way the work of the board of health, but is only too glad to co-operate with it and solicit its inspection of its work, both before the work is covered up and after it is completed.

Cannot Guarantee Forever.



"But while the master plumbers may construct a perfect system of drainage for his client, and prove conclusively by the water test before the work is covered up, and the smoke test after it is completed, and in the presence of the plumbing inspector, he cannot guarantee it for all time, as a careful perusal of the following article will show:

" 'Within two weeks, twenty-five children, pupils in the public schools in Scranton, Pa., died of what was believed to be diphtheria. Investigation shows that a sewer pipe leading into the building had been tapped. The sewer gas, which accumulated at night, was fanned into the class rooms through the cold air pipes during the day. About twelve years ago we heard the cry on all sides 'Poisoned by sewer gas,' but now it is outworn, and followed by others, but this recalls the fact that many cases of diphtheria have been traced directly to apertures in the pipe that comes from the sewer. In Brooklyn, where the 'jerry' builder had his own way much more than he does now, in one of the aristocratic portions of the town, there were repeated cases of this dreadful disease, and often it was traced to a badly calked joint, or the settling of the wall having opened a gap between sections of the pipe leading to the sewer. The best of plumbing will grow old, and the microscope will occasionally show very tiny holes, gnawed by the ceaseless action of the tooth of time, and, small as they are, the germ of diphtheria is smaller still. So the moral is, look to the pipes.'

"There are many of our members who can bear testimony to the fact that in many homes, where there has been sickness and death, and they have been called upon to make a test of the drainage system, the conditions existing justify the statement that it was caused through the sewer gas leaking into the house. They have found improperly constructed and poorly prepared plumbing, and plumbing greatly in need of repairs, and in some instances on almost criminal carelessness on the part of the head of the household, in regard to the lives of those dependent on him, and intrusted to his care. Two or three cases cited by our members will serve to substantiate this statement.

Sewer Gas Causes Typhoid.

"In a home where there had been two deaths from typhoid fever closely following each other, the attending physician recommended a test of the drainage system. A peppermint test being made, the strong odor of peppermint around the bath room was conclusive evidence that sewer gas in large quantities had been leaking into the house, and was doubtless the cause of the deaths. In

JOHN A. GORDON, Montreal.
Secretary National Association of Master Plumbers of Canada.

To Mr Sorrimen
Cut Book 55
Page 16

another home where a mother and two children were sick with typhoid fever, a peppermint test was made, which showed that the carpenter in replacing the floor after the plumbers, had carelessly driven his chisel through the lead pipe and left a wide gash. Also where the iron pipe passed through the wall into the sewer pipe, no cement had been used to make the joint, nor had the hole made in the wall been closed up. The sewer gas was leaking into the house from these two sources. In another instance it was found that the inside of the wash stand trap had fallen apart and there was no water in the trap to form the seal; allowing an opening one and one-quarter inches in diameter to admit the sewer gas into the bath room. These are only a few of the many instances that might be given.

"It can hardly be imagined that there is any head of a family who would be wilfully negligent in the matter of furnishing a pure atmosphere in his home, and the preservation of the health of his wife and family and domestics. Yet in this matter, as in all others, 'Eternal vigilance is the price of safety.' The fact that you do not detect any odor of sewer gas does not prove that it is not there, for sewer gas may have no perceptible odor and yet be filled with disease germs.

Regular Tests Advisable.

"This is not written needlessly to alarm anyone, but to show that the only safe course to pursue is to have a periodical test and examination made of the drainage system of your homes and places of business, so that any defects may be found and repairs made at once. In the early Spring, before the house-cleaning is done is a good time for this to be done.

"In the past, the method used has been to stop up all the outlets but one, and pour in a quantity of oil of peppermint, and after it a pail of boiling water and seal up this opening, and allow the peppermint to remain in the system, relying upon the odor entering the house to determine the presence of sewer gas. But this has not always enabled the plumber to detect just where all the leaks were on the first test, necessitating additional tests which proved very expensive. The smoke testing machine having been perfected, it is recommended by this association that its members use this method only, and that the public insist on it. It is the most economical and reliable. It not only determines the presence of sewer gas but locates the leak at the same time, so that all repairs may be made without resorting to repeated tests, before the final test is made.

Smoke Test Most Satisfactory.

"The machine consists of an inner cylinder for holding the substance to produce smoke, with an outer cylinder floating in water, and so adjusted that the pressure in the drainage system cannot possibly be raised high enough to force the seal of the trap under the fixtures, provided they are of sufficient depth. If they are not, the machine will disclose the fact. If the seals of the traps are broken, through a wearing away of the interior of the trap, it will also reveal this defect. All of the openings of downspouts and ventilating pipes at the roof are then closed up, except the downspouts opening on the porches, as these should be trapped at the base, and if they are not, you want to know it, and whether they are or not will be made apparent at this time. The machine is then attached to the fresh air inlet of the trap at the surface in front of the house. The smoke is then pumped into the drainage system by means of bellows attached to the machine. It will be seen by this explanation of the operation of testing that it is not necessary to have the plumber enter the premises at all, unless it should develop that there is a leak in the drainage system. The owner is inside to determine that fact for himself. He can then call in the plumber, and they together can locate the leak from the smoke which will be seen coming out; he can also form an intelligent idea as to the extent of the repairs which will be necessary.

"The article quoted, together with the experiences of many of our members out to convince the public of the necessity of having all school houses and public buildings tested periodically, and urged upon the board of health that they insist on the board of education and the city council taking immediate steps to this end.

"Tenants would do well to demand from owners of buildings they are renting or about to rent a certificate from the board of health to the effect that a smoke test had been made of the drainage system, and that it is in perfect order."

A PERTINENT QUESTION

The question asked in Hardware and Metal of Aug. 11, reproduced below, has brought a goodly number of replies from readers in nearly every Province in Canada. The replies make interesting reading and will be published in our issue of September 29.

In the meantime we repeat our offer to give a year's subscription to every plumber or fitter sending a reply considered worthy of publication as well as an honorary prize of $5.00 to the one sending the best answer. Send in your answers.

The question is as follows:

If you were installing a hot water heating plant having 500 sq. feet of Radiator, and a boiler rated to handle the same amount, and you were asked by your customer if there would be any advantage in installing a larger sized boiler either in the interest of better service or economy in the consumption of fuel, and if so, why? What would you say?

VALUE OF ASSOCIATIONS QUESTIONED.

Editor Hardware and Metal:—I read with a great deal of interest in last week's issue a letter signed by Subscriber anent Ottawa's association, and that portion particularly referring to the generally low prices obtaining in the plumbing business at the present time.

I hardly agree with him, however, when he tries to draw the conclusion that such a state of things would not exist if the city had an association price list to be maintained. Agreements kept depend on the loyalty and good faith of each individual member, and associations such as are in active operation to-day are not particularly noted for loyalty and good faith. Evidently this has been the experience of the Ottawa association when the action of one of its members was sufficient to bring about the results described.

Broken Agreements Common.

This is in fact the experience of all associations of a like nature. One or other of the members would break faith with his fellows, and agreements signed by members were more honored in the breach than the observance.

Members do not keep faith with an association, whether they subscribe their names to an oath or plain agreement. It is this failing in human nature which is the most serious phase of all association work and which produces the feeling of discouragement and disappointment so noticeable amongst past workers in the promotion of associations, the feelings produced being described as "What's the use of trying to do anything as long as that fellow is in the trade? You never know when he'll break away." Or again: "What's the good of making out price lists when you know from past experience that Mr. So-and-So will be the first to cut you out on the strength of his knowledge of the association price?"

Many years ago an association was formed in one of our Ontario towns. A set of rules and agreements was drawn up, along with a price list to be maintained. Each member placed his cheque with the secretary-treasurer for $25 as a guarantee of good faith, said cheque to be forfeited on a majority vote of the association. It was only a question of a short time when two delinquents were reported and after inquiry their cheques were forfeited. But when said cheques were presented at the bank for payment it was found that there were no funds to their credit in that particular bank. The same conditions as a rule exist in most associations where there is no means of ruling offenders against the price lists and other agreements. What, then, is the good of associating when no direct financial results are being brought about for the benefit of the members? Direct financial benefit must be the aim of all association work, otherwise association is merely a misnomer for a series of social evenings to those socially inclined. But to the busy man whose business keeps him closely engaged during the day, such meetings do not always appeal, as he more often wants to spend his time in his home with his family.

Associations as at present obtain amongst the plumbing trade are not an effective means of direct profit to the trade and as such are not likely to have the practical and moral support of the master plumbers as desired by your correspondent.

ANON.

August 27, 1906.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 31, 1906.

A scarcity in iron pipe is the feature of this week's market. This is, to a large extent, the result of the two weeks strike at the Montreal Rolling Mills, one of the two producing points in the country. The shortage is most keenly felt in galvanized pipe, particularly in sizes up to 2 inches, which are manufactured in Montreal. Coming at such a busy part of the year, two weeks cessation of operations means a great deal to the plumbing trade.

Prices throughout the list are very steady, and no changes have been made this week.

RANGE BOILERS—Last week's advances in copper boilers are being firmly maintained. We still quote: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list. Copper, 30 gallon, $25; 35 gallon, $29.50; 40 gallon, $32 net.

LEAD PIPE—Further sharp advances in the primary market have considerably strengthened quotations. Discount remains: 15 per cent., f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b., London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—A brisk demand is felt by all the local supply houses. We are still quoting: Discounts on all sizes of nipples up to 6 inch, 67½ to 70 per cent.

IRON PIPE—A shortage has resulted from the strike at the Montreal Rolling Mills. Shipments have now been resumed in all sizes, however, and in spite of a very active demand, it is expected the pressure will soon be relieved. We quote: Standard pipe in lots of 100 ft., regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27; 2 inches, $36.50; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS—Business conditions remain about as usual, and we are still giving discounts as follows: Standard soil pipe, 50 p.c. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—Conditions are unchanged. Prices remain as follows: Bar solder, half-and-half, guaranteed, 24c.; No. 2, wiping solder, 21c.

ENAMELWARE — Large orders are constantly coming to hand, as the finishing stage is being reached in plumbing contracts all over the country. We quote: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.50, special $17.15; plate E35, 5 feet, 1st quantity, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.: special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, August 31, 1906.

There are no changes in price this week, and no outstanding feature of the market. Business keeps good, particularly in baths, lavatories, and finishing goods. Iron pipe is pretty steady now, no price cutting being done so far as can be ascertained. Lead pipe is firm in price but without change. Enamelware is still much in demand, particularly baths, which are being called for daily by wire and letter by customers.

LEAD PIPE—Prices keep firm, but without change. Pig lead is high and for a time it was thought an advance would be made in pipe. We quote as follows: Lead pipe, 8c., discount 15 per cent.

SOIL PIPE AND FITTINGS—Quotations continue as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—Cutting prices is said to be pretty well over, and an even market prevails. We quote: Black, 1 in. pipe $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS — We quote as follows: Cast iron elbows, tees, crosses, etc., 67 1-2 per cent.; cast iron plugs and bushings, 67 1-2 per cent.; flange unions, 65 per cent.; nipples, 75 and 5 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 and 10 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hookplates, 65 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 1-2 per cent.; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallon, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—Business in radiators still keeps up to the top notch. Prices remain the same. We quote: Hot water, 50 and 2½ per cent.; steam, 50 and 5 per cent.; wall radiators, 50 per cent.

SOLDER—Prices are firm but without change from last quotations. We quote: Bar solder, half-and-half, guaranteed, 26c.; wiping, 24c.

ENAMELWARE—Some difficulty is still experienced in getting enough baths, and jobbing houses are doling a few out here and there to keep customers going. We quote: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $14.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.90. Fittings extra.

NEW INVENTIONS.

A. W. Howe, Honolulu, Hawaii, has secured a patent for an invention having reference to water closet bowls. The object is the production of a bowl with which a cuspidor is incorporated, to the end that the cuspidor may be automatically cleaned. The device is very sanitary.

J. W. Be Quette, Platteville, Wis., and B. F. Sackett, Toledo, Ohio, have secured a patent for several improvements in devices for giving ventilation to buildings or rooms, the object being the provision of a ventilator so constucted that the hot or foul air will readily pass out from the top or upper portion of a room and be replaced by fresh air. It is designed to be arranged in the wall of a building.

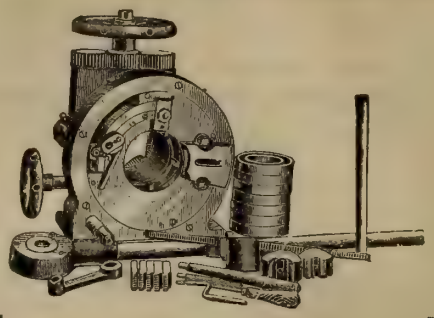
L. T. Alton, New York City, has brought out an invention which provides a check and air-mixing chamber and also an additional air chamber, which surrounds the mixing chamber and permits a supply of pure air—that is, air free from gas—to be directed against the inside of the mantle in predetermined quantities, whereby a more complete combustion is had, and a larger mantle may be heated either to incandescence, if the mantle is to be used for lighting purposes, or to a lower degree if the burner is desired for heating purposes only.

C. T. Miller and D. B. Storck, Battle Creek, Iowa, have invented a chimney cowl formed from a single piece of metal of special construction by which wind striking it from any direction is caused

to be utilized as an accessory in eductiug the smoke and other products of combustion fom the chimney in connection with which the cowl may be employed. The structure may also be formed of two pieces of metal, each practically a duplicate of the other, the two pieces being cut out and struck up to the desired form, so as to present substantially the form of the first piece of metal.

PLUMBERS' UNION CONVENTION.

The United Association of Plumbers, Steam and Gas Fitters of America will meet in Toronto from September 17 to 24. This is the first meeting of the union men since the one held in Birmingham, Ala., in 1894, and as there is a great amount of business to transact, the association expects that it will take a week to do the business. This is the first time this association has met in Canada and the local organization is making great preparations for the entertainment of their friends. The delegates will number about 400 and the Arlington Hotel is the headquarters. All meetings are to be held in the Labor Temple..



TORONTO PRICE CUTTING.

"A growing evil among the plumbing trade in Toronto," said a plumber one day last week, "is the cutting of prices. And its a shame that plumbers will resort to it just to secure the work. It isn't always the man with the small business who does the cutting; generally its the man with the big business. Every plumber in the city has an idea of the regulation percentage, but these people will not stick to it. If they did, they would make just as much in the end, and we would all have a chance. In fact the way some plumbers are going after work now, they don't make any more than the cost.

WANT MORE PUBLIC CONVENIENCES.

The Toronto Board of Control and the employes of the Toronto Railway Company will confer with a view to applying to the Railway and Municipal Board for an order directing the Toronto Railway Company to place and maintain public drinking fountains and lavatories at different points in the City of Toronto, for the use of the employes and public generally.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing diehead, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

Not Because it Differs But Because it Delivers

The Oxford Boiler Earns Profit Easier

The Oxford Hot Water Boiler isn't built different just for the sake of oddity.

There's the strongest kind of a proved reason for every detail in which it differs from other boilers,—and it differs in a great many.

The Oxford alone has the right grate-bar design,—hollow and triangular, to compel the fire to burn more air than it burns fuel. It has in-sloped fire-pot walls and a big-belled, double-deep first section, because that is the only way to get every possible bit of good out of the fire. It has all-metal, no-rubber, joints to make leaks impossible and your work easier and surer. All these things are differences.

If you are in Toronto during the great Exhibition, you'll find a welcome at our exhibit in the Process Building. You'll find one, too, at either of our huge factories,—500 King West, or Toronto Junction.

These differences make the Oxford Boiler the boiler that saves buyers fuel money and dealers' reputation.

If it wasn't for these differences the Oxford Boiler couldn't be classed so far ahead of all its other boilers.

It is classed ahead because it **DOES DELIVER THE HEAT FOR LESS MONEY.**

It stays ahead because it is sold **for** you as well as sold **to** you.

Isn't that interesting enough to get you to look into the whole proposition ?

UNITED BRASS GOODS HAVE FEATURES ALL THEIR OWN.

UNITED

Patented Fuller work has a unique eccentric which gives only positive back and forth motion with no side swing. **UNITED** Fuller work has full-sized waterway and special composition balls that will stand hot water without swelling. **UNITED** Fuller work is the only Fuller work that has no trap beneath the stem to catch and hold water after the piece is turned off.

THE UNITED

Fuller Bibb shown in the cut is the Patent Fuller Plain Bibb with Screw-on Tail, fitted with an Adjustable Set Screw Flange. The gentle taper of the tail is a **UNITED** feature. It permits the adjustment of the flange at any desired distance from the shoulder of the bibb, thus making a neat job no matter what the thickness of the sink back may be. **UNITED** compression work is also furnished with the Set Screw Flange.

CURRENT MARKET QUOTATIONS.

Aug. 31, 1906

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

Hardware and Plumber—

We have pumps suitable to any demand made upon you by most exacting customers.

Our pumps will do anything that a pump can do, and we will be pleased to give the benefit of many years' experience to any one having pump troubles.

McDougall Pumps are Standard Pumps, and with us it is quality first, last and always, while we ask just as little money as we can get along with.

We have a few catalogues for distribution

STAY-ON
Horse Blankets

"Imperial Crown" Brand

The difficulty with most Horse Blankets is that no matter how you attach them to the horse, they will work off In the special make of our **STAY-ON BLANKETS** this difficulty is overcome. We have spent labor and money to perfect all kinds of horse clothing, and we are pleased to demonstrate to all the advantages derived from the use of our specialties. You pay no more for our goods than you do for inferior qualities.

OTTAWA, ONT.

American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

SOLD BY LEADING JOBBERS.

Send for Catalog.

The "Come-of-its-own-accord" Business is the Kind that Pays You Best

When a dealer sells one of our

HANDSAWS

he lays tracks for a host of sales. That comes as a result of our handsaws having such an abundance of merit that neither dealer nor consumer can help seeing it.

The demand for handsaws is controlled by the supply — of quality. We have an unlimited supply.

No. 87—"Silver Steel," patent ground, hollow back, highly tempered and finished blade.

NOTE: Besides all kinds of Saws, we manufacture Canada Webs, Files, Edge Tools, Shovels, Forks, etc.

A TIP IN TIME MAY SAVE A BUSINESS

"DISSTON'S" FILES

RETURNED SEP 10 1906

Do the Catalogue Houses Affect Your Business?

Every year the sales of these great concerns increase by thousands of dollars. Where does this money come from? Some may be due to the increase in the population, but the greater part comes from the inhabitants of the smaller cities and towns; from people who should by rights be the customers of the retail merchants.

If you are losing your trade you have only yourself to thank. People don't buy from Catalogue Houses because they love them, but because they imagine they can get better bargains than they can from you. It's up to you to make them think differently.

Every week we are going to show you goods that will help you out of your trouble.

We don't waste time or money advertising goods that don't sell. Every line we show in our ads. has proved itself to be a favorite with the buying public.

As a start to your campaign you couldn't choose a better line than **DISSTON'S FILES**. These files are well and favorably known throughout the country.

In your next ad. advise the people that you have a line of files that you can prove to them will beat in quality and cutting ability **any file** that can be bought from **any Catalogue House**, and the difference in price, if any, will be so small as to be unnoticeable.

The only way to increase your sales is by gaining the confidence of the public, and the only way to do that is by selling **good honest goods** at **reasonable prices**.

For the honest goods watch our ads. in this paper; we know the game we are playing and will not fool you.

As we look to the retailer for our trade, it pays us to do all in our power to help him succeed.

Start right now by asking our prices on these files.

Our large 1,000 page catalogue, No. 31, will show you our full line—they are **not sold** by Catalogue Houses.

Every File Stamped "Disston" is guaranteed perfect, and everyone that leaves the factory is stamped.

THE STEEL

employed in the manufacture of "DISSTON'S" FILES is made in a special plant at the Disston Works.

This together with perfect workmanship and the most up-to-date machinery, makes Files that for cutting and lasting powers cannot be approached, much less surpassed.

A trial will prove it.

RETURNED SEP 10 1906

If You Want the Best in Files, Specify Disston's and See That You Get Them. Name Stamped on Every File.

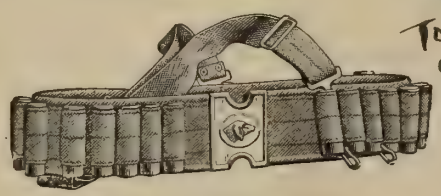
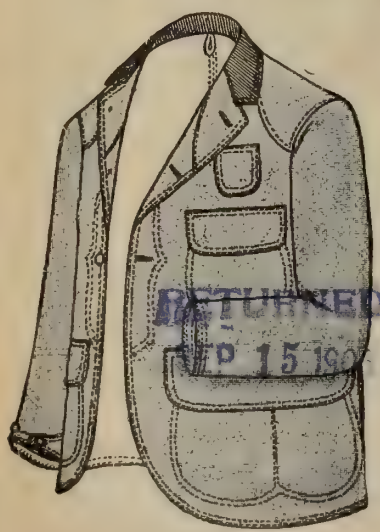
Where the Profit Comes in



There's often more profit made in selling the many small articles required in a shooter's outfit than in selling a gun or rifle.

There are many novelties that are standard, and that sell constantly, and are not subject to changes in shape or style.



These you should keep in stock. We show here a few of them.

4 Sizes of Cartridge Bags.

No. 200.—Woven Cartridge Belt.

No. 12.—Canvas Hunting Coat.

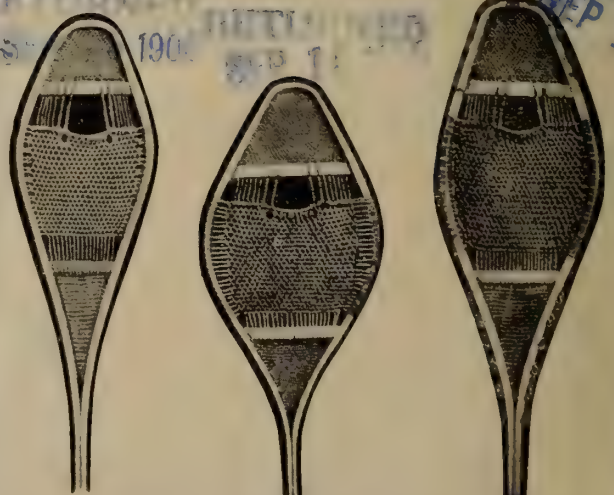
Many other good-selling articles of a similar kind are shown in our **"Sporting and Fall Goods"** Catalogue.

A post card brings a copy.

F.&W.

Snowshoes for Business and Pleasure

Large numbers of Snowshoes are used each year in the lumber trade and by others whose work calls them into the northern woods.



The popularity of snowshoeing as a sport is increasing and hardware men should profit by it.

The line we offer affords sufficient variety to meet the requirements of the different uses to which Snowshoes are generally put.

Our Snowshoes are made by Province of Quebec Indians experienced in their manufacture. Good material and correct shape are qualities of these shoes.

Snowshoes should be ordered as early in the season as possible.

The full line is shown in our **"Sporting and Fall Goods"** Catalogue.

No. 5.—Men's Shoe. 42 x 12 in.

No. 26.—Shanty Shoe. 44 x 18 in.

MANUFACTURED BY
Ontario Lantern & Lamp Co., Ltd.
HAMILTON, ONT.

Model 16, Light-Weight 16-Gauge Shotgun. The lightest gun and the lightest load that will do the work, mark the greatest pleasure for the sportsman; the reduced weight of gun and shells to be carried is truly a blessing, readily appreciated by the experienced hunter.

The *Marlin* Model 16 is the only light-weight repeating shotgun made, and so well is it built of selected material, with the special *Marlin* method of boring and choking, that it is actually more effective than most of the 12-gauge guns of a few years ago.

All the features of the famous *Marlin* 12 gauge are present in the Model 16. The solid top and side ejector—the automatic hang-fire safety recoil block—the "Special Smokeless Steel" barrel—the solid matted rib on the frame—the beautiful hang and finish—but each part is made a little smaller, a little lighter and a little neater.

All the parts of the breech and the closed-in action are made of the time-tried *Marlin* steel drop forgings and are very strong.

The barrel is guaranteed to pattern 240 pellets No. 7½ shot in a 30 in. circle at 35 yards. No quail or woodcock can get through a pattern like this, and for grouse, prairie chickens, teal, wood ducks, squirrels, rabbits, etc., this gun is unsurpassed.

Write TODAY for our Catalog which describes in detail the Model 16 as well as the full ***Marlin*** *line of guns—mailed free for six cents in stamps.*

TO ALL DEALERS HANDLING FIREARMS:

The above is one of seven advertisements to be used by the Marlin Company in their 1906 advertising campaign. These advertisements will be inserted in a list of magazines selected for their QUALITY, known to be bought and read by a class of people financially able to buy Marlin repeaters and having a total guaranteed circulation per month of 5,000,000. Estimating five readers to a magazine, this will give a total, for seven months, of 25,000,000.

In addition, Marlin goods are advertised in farm papers, hardware papers, sporting goods papers and in many miscellaneous publications.

In our advertisements we ask for six cents in postage stamps. This means that a person must furnish paper and envelope, a two-cent stamp for mailing, include six cents and take the time and trouble necessary to write us a letter. Our object is to cut out catalog collectors, young boys and girls and people who are not interested enough to invest ten cents and the time and trouble necessary

We reason that if a person is interested enough to do this, it is worth our while to go after him seriously and earnestly, and on all inquirers answering these advertisements and spending ten cents on us, we spend more than twenty cents.

We send each and every one a 136-page catalog illustrated with hundreds of engravings, having a beautiful cover in colors and containing a large amount of general information interesting and instructive to all shooters whether they use Marlin repeaters or not

We send also a copy of our 96-page illustrated testimonial book and a personal letter in which we refer them to the nearest dealer that we know of who carries a good stock of Marlin goods and is enterprising enough to follow up an inquirer and try to sell the man a Marlin repeater.

We also send to the dealer the name and address of the party inquiring, thereby putting the dealer and the consumer in direct communication one with the other. We also follow up the customer and urge him to buy through the dealer.

Our advertising campaign each year brings us thousands of inquiries and makes us a great deal of expense and trouble, as you can readily see, but we believe that it pays us and it will pay you if you will take part in it.

If you are interested please write us and give us full particulars as to exactly where you stand on Marlin goods. If you are with us we want to know it and send you some of this business. Write us to-day and tell us whether you want to be on our dealers' list or not.

Two Kinds of Profit In Just One Range

Selling the Oxford Chancellor Steel Plate Range gets the live dealer two profits he can use to good advantage . . . .

There's not only the profit on what he does sell when he sells the most perfect range the price buys anywhere, but . . . .

There's the profit on what he doesn't sell when any woman buys the Oxford Chancellor.

For his customer doesn't buy kitchen bother—but she does buy a range that is easier to run and to keep clean than any range she ever knew.

She doesn't buy the chance of spoiled bakings — but she does buy the range that can't help baking better simply because it's designed and built to bake perfectly.

She doesn't buy the risk of too-frequent repairs — but she does buy the range that is built so 'twill be a good range when most ranges would be worn out.

Trust her to remember you as much for what you don't sell her as what you do—it's a pleasant memory when it rests on an

PROTECTION MEANS ECONOMY

The Plumber who tests his jobs before rendering his account has that assurance that his reputation for good work will not be reflected upon.

He does not have to rip out new work to get at some defect that has "shown up" after he has left it, as perfect, and complete.

The Smoke Test is the only perfect one and the **THOMSON SMOKE MACHINE** is the simplest and most efficient for the purpose. Write for Booklet and get posted. It's interesting to all progressive plumbers.

ONTARIO RETAIL HARDWARE CONVENTION

Representative Gathering in Toronto on Sept. 4 and 5—Important Work Done—Conference with Jobbers—Reduced Insurance Rates.

The gathering of hardware merchants from various parts of Ontario to attend the second convention of the Ontario Retail Hardware & Stove Dealers' Association was representative in every way, there being about three dozen delegates present, as many as attended the Western hardware convention at Winnipeg during the Winnipeg convention, one out of every five of the members of the Ontario Association being on hand, a much higher average than is usually secured at conventions of retail merchants. At such a busy time, when many salesmen are away on vacations and merchants are busy preparing for the fall business, it is gratifying that so many sacrificed their business interests at home in order to aid in bettering the condition of the trade generally as well as endeavoring to learn more advanced business methods through association with the livest and most progressive dealers in the province, who assemble at hardware association conventions. The presence of three delegates who traveled from 200 to 300 miles to attend the convention is proof that the hardware dealers of Ontario are in earnest in their desire to improve their position through a strong trade organization.

A vast amount of work was done in an incredably short space of time, the convention being in session less than six hours in all. Before adjourning several of the delegates announced that they had been amply repaid for the expense of attending the convention by the knowledge gained through hearing the addresses of Messrs. Fred C. Lariviere and J. Walton Peart, and the remarks of other delegates. From this standpoint it was deplored that so few of the trade were present to enjoy the advantage of first-handhand information regarding the subjects discussed.

The important matters which received the consideration of the delegates included the consideration of the Executive and Mutual Insurance Committees, the adoption of the resolution favoring the amendment to the Criminal Code and the appointment of a committee to prepare a report on a debt collection plan to be presented at the next convention in March.

TUESDAY SESSION.

The convention was called to order promptly at 2 p.m. on Tuesday, over 30 delegates being in attendance, the list of those enrolled being as follows :

The Delegates' Roll.

F. A. Richard—Verner, Ont.
G. H. Clark—Niagara Falls.
James D. Smith—Baysville.
J. E. Westcott—Ailsa Craig.

Weston Wrigley—Toronto.
Latimer & Elliott—Chesley.
Joseph Heale—Toronto.

The first order of business was the reading of the president's address and the secretary's, treasurer's and executive committee's reports, these being reproduced in full as follows :

President's Address.

Gentlemen :—I am glad to welcome you to the 2nd convention of our association. Since its organization on April 13th of this year I am glad to report that our numbers have rapidly increased since organization, when we began with a mere handful in the Rossin House and now in five months we have between 150 and 200 names on our list. I can easily understand this rapid growth—it is on account of the great need of the organization.

We notice that almost, if not all, other businesses, trades and professions have their organization and their conventions and these conventions are considered of so much importance that men travel thousands of miles across oceans and continents to attend them that they may confer with one another, talk over matters concerning their business or profession, recommend to their legislators improvements in the laws concerning their particular calling and request them to pass such laws that it may be for the good of the country in general as well as to themselves and their organization in particular.

There are about 1100 hardware and stove dealers in this Province. They claim to have many grievances. They have many wrongs they want righted. How is this to be done ? By uniting the forces and ask that it may be done for "In union there is strength."

Some of the members of this organization are becoming impatient that more has not been accomplished for I have heard murmurings but all I can say to you is to have a little patience. We are young, but have not really been idle for I have written over a hundred letters myself and the secretary many hundreds of them. We have accomplished some things that we cannot tell you at present, but hope to do before the close of the convention. When I offered to assist in any way that I could in forming an association in a letter to Hardware & Metal I really had no idea that you would place me in this honorable and onorous position. I am talking to men to-day that could have filled it with better grace and have brought more honor to the organization by their presence in this office, but you will have to accept what we have done as the best we could do under the circumstances. I am sure that after the year's start, and experience of the whole association the new officers to be elected at our next meeting will be able to "Make it hum."

I see no reason why The Grievance Committee and the Insurance Committee should not have excellent reports to lay before the convention and it will be for you to deal with them, here and now. The matter of organizing a collection business as our Western brethren have done might be considered by us, and it would certainly be more effective if our numbers were larger, and if more would join us more would be benefitted.

The matter of forming a Dominion Association may also be considered by us at this convention. If we have an organization that extended over this great Dominion then we could make some of these people who are imposing upon us "Sit and take notice" as they say in the slang of the day, and I hope that this may yet come to pass.

Now, in conclusion, gentlemen, we want every man to have a chance to express himself, to air his grievance if he has one, to speak a cheering word to his brethren and to help along the work of the convention, for it is generally admitted that of all the hardware and stove dealers in this province very few are making any money because they are cutting the price of their goods down so low that no profit remains for the dealer.

I frankly confess that one of the principal objects of the association is to overcome this price cutting among ourselves, as well as to learn the best methods of handling our goods at the least possible expense, and with the greatest reasonable profit. Get acquainted with each other, be on friendly terms with each other and you will find we are all good fellows after all.

A. W. HUMPHRIES, President.

Secretary's Report.

Gentlemen :—As the time of this convention of the association will be limited I will merely outline briefly the work done and the progress made since our last convention four months ago. At that time our membership totalled 120 and we can now report over 150 members enrolled.

Since the convention in May two circular letters have been sent out to the 1,100 hardware and stove dealers in Ontario. Eleven circular letters have been sent out to the ten members of the Executive and nearly 400 other communications have been written regarding association matters, making a total of upwards of 2,500 letters mailed from the secretary's office. The secretary has also made three short organization trips, personally enrolling about a dozen members.

The organization work has been hampered by the resignation of Organizer Hodson to accept a responsible position, and the inability of the Executive to secure a suitable man to fill the position, although D. C. Taylor, Lucknow, kindly made a short trip as temporary organizer a fortnight ago. The summer season is naturally the slowest in which to push organization work and consequently it is gratifying to report a substantial gain in membership under adverse conditions. It is imperative, however, that a permanent organizer be at once secured if the association is to grow and prosper.

Travellers Affiliation,—The travelling salesmen have added materially in the up-building of the association, several jobbing houses having written their salesmen urging them to speak a good word for trade organization wherever possible, as anything that tends to strengthen the financial condition of the retailer is certain to make the position of the jobber and manufacturers more secure. In this connection I would point out the advisability of amending our constitution to allow travelling salesmen to become associate members of the association. A recent letter from Chas. E. Taylor, sec.-treas. of the Arkansas Retail Hardware & Stove Dealers' Association outlined the experience in that state as follows : "Two years ago our association invited travelling men who sell goods to our members to join our association on a basis of associate membership. The travelling men had been attending our meetings and had added no little to the interest and enthusiasm of our gatherings. They accepted our invitation and we have found that they have built up our association no little, especially with the merchants who have not heretofore affiliated with us. We charge them annual dues of $1.00—our active membership dues being $5.00 per year." The Arkansas Association has an enlistment committee composed of salesmen who are associate members of the association. The Western Canada Association also admits travelling salesmen as associate members.

WESTON WRIGLEY, Toronto
Secretary Ontario Retail Hardware and Stove Dealers' Association.

Dominion Organization,—The secretary attended the Convention of the Western Canada Retail Hardware & Stove Dealers' Association in Winnipeg on July 25. The Executive Committee having authorized the issuance of credentials as fraternal delegates, and the association being under no expense in connection with the trip. The secretary found the Western Association to be comfortably located in permanent quarters, with office, meeting room, telephone and typewriting facilities. The members pay $10.00 a year and of the 100 dealers in the three western provinces over 300 have been enrolled by secretary McRobie. The convention was a representative one and considerable business was transacted. The most important matters were the arrangements made to discipline a jobbing house for persistently selling to retailers, the decision to withold dues from the Retail Merchants' Association and the resolutions adopted favoring the formation of the Dominion Retail Hardware Association similar to the National Retail Hardware Association in the U.S. No definite plans have been laid, this being left until the proposal is endorsed by the Ontario Association. This convention might authorize a committee to consider the matter and appoint a delegate to attend the next convention to be held at Winnipeg in February, where a plan might be drafted to be acted upon by our next convention in March, 1907.

The representative present from Quebec at this convention, might also be requested to act with the committee in considering this matter of Dominion organization. That the interests of the trade in all the provinces are identical is proven by the complaints received from New Ontario of price cutting by Winnipeg jobbers and the statements made at the Winnipeg Convention that western jobbers say they are forced to sell to consumers to meet the competition of Toronto and Montreal houses.

Collection of Bad Debts.—Important features of the Retail Hardware Associations in Western Canada and elsewhere are the systems adopted of protecting the members against dead beats and in collecting accounts from such individuals. In recent issues of Hardware & Metal articles appeared outlining a plan drafted by Mr. Peart, of St. Mary's, and the one in use in Western Canada. These should be considered by the members of the association and an action taken at the convention or the matter referred to a committee for report at the March convention.

Transportation Problems,—Members of the association have urged the necessity of considering the placing of address labels on express parcels showing the shipper's name, as well as freight classifications and the rates the railroads are charging. If a special committee had charge of this matter members having grievances relating to transportation matters might report them so that they could be fyled and brought before the Railway Commission in the name of the association.

Price contracts—Since the May convention the price contract plan, which was urged for adoption by this association has been declared illegal by Justice Clute in his decision in the case of Wampole vs. Karn. It is practically impossible for business men or even lawyers to say just what price agreements are illegal at present, but it would seem that friendly agreements between merchants in the same towns or districts are permissable if prices are not unreasonably enhanced. It does seem unjust that merchants should be prevented from agreeing not to sell goods under a certain minimum price. Trade unions, lawyers and doctors are allowed to agree upon a minimum price at which to sell their commodities, each getting as much more as they can. The law, however, singles out merchants as the only section of the community who are denied the right to organize and arrange prices on the commodities they sell which will allow them to keep out of bankruptcy. Action should be taken at this convention to demand a revision of the section of the Criminal Code governing this matter and the Western retailers invited to co-operate in presenting the demand to the Dominion Government.

WESTON WRIGLEY, Secretary.

Both the president's address and secretary's report were received with applause and on motion received and referred to new business.

Treasurer's Report.

The treasurer reported receipts amounting to $224.83 and expenditures of $106.96, leaving a balance to the good of $117.87.

Executive Committee's Report.

The Executive Committee reported that they had delayed action regarding the grievances registered against various jobbers or manufacturers up to the present time, having been devoting all of their energies during the summer months in pushing organization work for the association. They reported, however, that certain objectionable market reports which were published in the daily papers until recently are now being published, and made the following recommendations :

1. That the association appoint a committee to interview representatives of the enamelware manufacturers and

W. G. SCOTT, Mount Forest

1st Vice-President Ontario Retail Hardware and Stove Dealers' Association.

ask them to stamp all seconds as such in plain letters of large size.

2. That the Special Committee appointed to meet the wholesale representatives request the jobbing houses to have all goods charged at sufficient prices to cover the cost of packing and to do away with all special packing charges.

3. That the Special Committee to be appointed advise the representatives of the wholesale houses that in future the members of this association will not pay cartage charges at point of shipment.

4. That the Special Committee urge that wherever manufacturers or jobbers sell to buyers outside the trade that the sale be made at a price sufficient to protect the legitimate hardware dealer.

It was moved that the executive committee's report be received and taken up clause by clause.

Fraternal Delegate.

At this point President Humphries introduced Fred C. Lariviere, of Amiot, Lecours & Lariviere, Montreal, a member of the hardware section of the Quebec Retail Merchants' Association, who had come to Toronto in order to attend the convention and learn how the organized movement in Ontario was progressing. Mr. Lariviere replied very briefly, saying he had not come with any intention of taking up the time of the convention. He came to learn, but if he could be of any assistance he was at the service of the delegates.

Mutual Insurance.

J. Walton Peart, St. Marys, convenor of the mutual insurance committee, appointed at the last convention, made a most interesting report giving valuable statistics compiled from the experience and records of the mutual hardware associations in the United States, the following being a synopsis of the report :

The Ontario Insurance Act is such that it would be impossible for us to organize without special legislation, and even then only upon terms entailing a considerable cash deposit and involving a considerable amount of risk to those making the necessary deposit and guarantee to obtain charter.

However, the difficulties in the way are not insurmountable and it is well for us to learn the advantages of a purely hardware mutual insurance organization.

The experience of a large number of American companies is most satisfactory. The risk is considered by them of a preferred quality for several reasons.

1. Hardware risks generally are preferred risks, usual care being taken in the storage and handling of oils.

2. The risks are isolated, few hardware stores being so close together as to endanger one from a fire in the other. Where two risks are in one block some endanger one from a fire in the other. others permit a maximum policy of $2,000 in each case against $3,000 in ordinary cases.

3. At least $500 insurance must be carried in a stock company as a guarantee of the desirability of the risk.

4. The insured are practically all known personally by the directors.

5. There being no agents or commissions and expenses, and fire losses being at a minimum, rebates are made to the extent of from 25 to 75 per cent. of premiums.

That the hardware mutual companies have the advantage over the stock companies the following tables will show :

For ten years ending December 31, 1905, the stock companies of the United States received in premiums $1,000,000,000, their losses and expenses exceeding this sum by $18,000,000, or 2 per cent. more than total premiums. Hardware mutual companies received during same period $318,000 premiums, their losses and expenses amounted to only $136,000, or only 43 per cent. of income from premiums, against 102 per cent. in case of stock companies, the profits of the stock companies arising solely from their functions as bankers.

During the 10 years mentioned the comparative figures were as follows :

Losses and expenses—Hardware mutual, 43 per cent. of premiums ; stock, 102 per cent. of premiums.

Losses on every $100 insurance—Hardware mutual, $1.10 ; stock, $6.

Expenses on each $100—Hardware mutual, 77 cents ; stock, $4.

Average operating expenses—Hardware mutual, 18 per cent. of premiums ; stock 33 per cent. of premiums.

The operating expenses of Canadian stock companies amount to from 33 to 40 per cent. of premiums, while some American hardware companies operate lower than 18 per cent., e.g., the Wisconsin association in 1905 operated on 15.77 per cent. of premiums.

The individual state associations furnish some interesting figures :

Nebraska association — Insurance in force, 1905, $150,000 ; fire losses $6.08.

Wisconsin—In force, 1905, $700,000 ; profits, 61 per cent. of premiums, 33 1-3 per cent. of which was refunded and the balance carried to surplus.

Iowa—1905, rebate 35 per cent.

Minnesota—1905, rebate 40 per cent. of dividends.

Other associations show similar results, the average rebates of eight companies being 39 per cent. of premiums.

J. WALTON PEART, St. Marys

Member Executive Committee Ontario Retail Hardware and Stove Dealers' Association.

Different companies have different methods of financial operation. Here are a few examples :

1. Deposit amount equal to one premium as a guarantee ; pay 4 per cent. of stock companies' rates monthly or 48 per cent. per year. The Western Lumbermen's Association found 48 per cent. a fair average cost of losses and expenses.

2. Pay stock companies' rates and refund proportionately, less losses and expenses.

3. Pay stock companies' rates and refund as above to the extent of 35 or 40 per cent., balance being placed to surplus to provide against extraordinary losses.

4. Write policies for three years, make cash deposit equal to one year's premium. Bill policy holders each year with their percentage of losses and ex-

penses until insurance is cancelled, then return deposit.

The third method is perhaps preferable.

The average premiums in Canada appear to be considerably less than in the United States, hardware dealers' rates averaging possibly 1.5 per cent. against 2.5 per cent., consequently some close study and examination is necessary before going into the matter of carrying our own insurance. The situation, however, taking the average expense as above and the average Canadian fire loss would stand about as follows, providing that initially we could write 200 policies of an average of $1,500 each, a total of $300,000 :

Premiums at 1.5 rate		$4,500
Average Canadian loss for a number of years is 58 per cent., making	$2,610	
Expenses (based on American companies) 18 p.c.	810	
		3,420
Leaving a balance of for rebates, or 24 per cent.		$1,080

Mr. Lariviere, of Montreal, suggested an alternative proposition, which in brief was as follows : Propose to an existing company to handle all hardware risks to a limit of $10,000 each. Have the secretary of our association act as agent, obtaining therefor a rebate of 20 per cent. without any mutual liability. Arrange for a further rebate of a percentage remaining after fire losses being deducted, such amount to go into the funds of the association.

Considerable discussion took place and finally the following motion was carried unanimously :

"Resolved, that the mutual insurance committee prepare a further report before the next annual meeting, the said report to include definite information with respect to the legality of the proposed insurance organization and the terms and conditions under which we may organize. Also, to report whether a mutual insurance organization within our association would be deemed preferable to an arrangement with existing companies to handle our insurance on a preferential basis."

Resolutions Committee Appointed.

Messrs. G. H. Clark, Niagara Falls ; W. B. Clifton, Alliston ; and J. A. Westcott, Ailsa Craig, were appointed a resolutions committee to report Wednesday morning.

Discussion on Enamelware.

The report was taken up clause by clause and thoroughly gone into by the members present. It was claimed by a great many that they were discriminated against in that in buying the better grade of enamelware at a higher price, they had to compete against stores that sold a second grade much cheaper, but that looked quite as good as the first grade. The second grades were only one dip goods and were handled largely by departmental stores and companies who gave them away with baking powder, corn starch and other goods. It was felt by those who had to meet this competition that the quality of the enamelware should be stamped upon the goods, not with a stamp that could be effaced, but by a permanent imprint. If there was a difference in price and quality in the one dip and the two dip goods, the fact should be made known so that the inferior goods could not be sold a customer to whom the difference in quality was not at the time discernible.

One member found that a competitor in his town was buying a cheaper grade of enamelware than he was getting and was thereby enabled to undersell him on what, to the customer, appeared to be the same class of goods. The goods were not chipped or broken in any way to show an inferiority. In connection with adopting this section of the report it was decided to instruct the committee who were to meet with the wholesale representatives, to take the whole matter up with the enamelware manufacturers.

Packing and Boxing Charges.

The second clause referring to the removal of packing and boxing charges was next taken up. One member gave as his experience an instance where in ordering paint from a jobber, there were two one-

J. R. HAMBLY, Barrie
2nd Vice-President Ontario Retail Hardware and Stove Dealers' Association

quart cans left over from the number which were packed into the main box. These two were put into a separate small box, the charge for which amounted to 15 cents for boxing on the two quarts. It was deemed unreasonable that the dealer should pay for packing cases, that he cannot use, cannot sell, and in many cases cannot return with any profit. He was not able to make any specific charge for his packing paper or his twine ; he had to give that gratis. Some dealers present said they had no trouble with paying for boxes. They simply made the fact patent to the traveler that they would not pay for boxes, and did not. On motion this clause was left over for further consideration at the next convention.

Cartage Charges.

Section three was also a clause which had an interest for all in the trade. At present the hardware merchant paid cartage both at the shipping and receiving ends ; this, too, in the face of the fact that orders called for goods f.o.b. point of shipment. What did f.o.b. mean if not free on board the cars ? Cases were cited where cartage was charged where no cartage was done, by firms who had trackage right into their warehouse. Several members claimed that they paid no cartage at the shipping end. They refused to do so, and so stipulated in the order. There were understandings and agreements between the wholesalers and the cartage and forwarding houses, but that was no part of the retailer's business. He should not pay these charges at both ends. This section was adopted unanimously.

Selling to Consumers.

Section four asked that wholesalers refrain from selling to those outside the trade except at an advanced price which would protect the legitimate trade. The names of several jobbing houses were mentioned who had gone to a hardwareman and taken his order, and then sold a bill of goods to the hardwareman's customer at the same price. "We do not ask the wholesalers to stop selling to outsiders," said the president, but we do ask that they stop selling at the same price at which they sell us. Such methods are stealing away our business little by little, and unless it is stopped the time will come when we will have no business left. Cases were cited where a man was sold a chisel, another a bit, and still another a few pounds of nails and some glass and building paper with which to build a boathouse. Section four was also carried unanimously.

A special committee composed of Messrs. Humphries, Scott, Peart, Paulin, Noble, Otton, J. D. Smith (Baysville) and the secretary were appointed to meet a committee of the jobbers to talk over these matters.

Travelers' Affiliation.

The question of travelers affiliating with the association as associate members the same as is done in the West, was brought up. There was some discussion on the subject, and vice-president Scott, of Mount Forest, gave notice that at the next meeting to be held in March, he would introduce a motion granting the privilege to traveling representatives of wholesale hardware and stove houses.

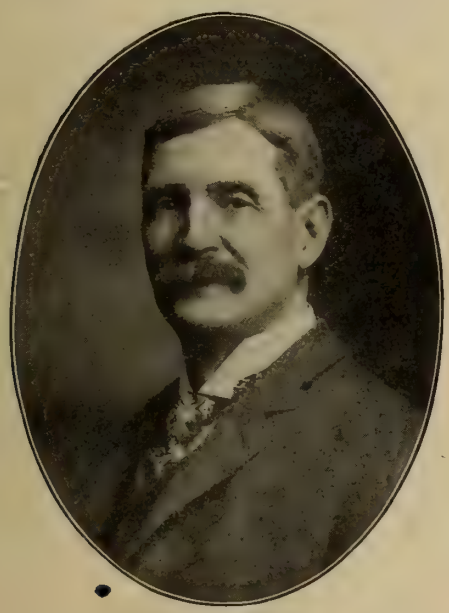
The convention adjourned at 5 o'clock.

Meeting with Jobbers.

At 5.30 the special committee of the association met a committee representing the Toronto, Hamilton and London jobbing houses holding membership in the Canadian wholesale Hardware Association. The resolutions regarding packing and cartage charges and selling to consumers, discussed by the Retail Association, and the position of the retailers on these matters were laid before the jobbers who gave reasons for the imposition of the charges objected to. After a lengthy discussion, however, the jobbers' committee promised to bring the subjects under discussion before the next annual convention of the wholesale Association, which is to be held at Hamilton during the coming month.

The special committee also took up the enamelware matter with Jenkins & Hardy, representing the enamelware association, and a copy of the resolution adopted will be forwarded to each of the three manufacturers.

WEDNESDAY SESSION.



The convention reassembled at nine o'clock Wednesday morning, the first matter taken up being the report of the Resolutions Committee.

Resolutions Committee.

We, your Committee on Resolutions, beg leave to report that we heartily endorse that amendments proposed by the Retail Merchants' Association to the Criminal Code, Section 520, and would recommend that some action be taken at this meeting to have the amendments adopted at the next session of parliament at Ottawa.

The following is Section 520 of Criminal Code, with desired amendments. The words in black being the amendments desired :

"520. Every one is guilty of an indictable offence and liable to a penalty not exceeding four thousand dollars and not less than two hundred dollars, or two years' imprisonment, or if a corporation, is liable to a penalty not exceeding ten thousand dollars and not less

JOHN CASLOR, Toronto
Treasurer Ontario Retail Hardware and Stove Dealers' Association.

than one thousand dollars who **unlawfully** conspires, combines, agrees or arranges with any other person, or with any railway, steamship, steamboat, or transportation company

"(a) To unduly limit the facilities for transporting, producing, manufacturing, supplying, storing or dealing in any article or commodity which may be a subject of trade or commerce; or

"(b) To **unduly** restrain or injure trade or commerce in relation to any such article or commodity ; or

"(c) To unduly prevent, limit or lessen the manufacture or production of any such article or commodity, or to unreasonably enhance the prices thereof; or

"(d) To unduly prevent or lessen competition in the production, manufacture, purchase, barter, sale, transportation or supply of any such article or commodity, or in the price of insurance upon persons or property.

"2. Nothing in this section shall be construed to apply to combinations of workmen or employes, for their own reasonable protection as such workmen or or employes or **to wholesale or retail merchants for their own reasonable protection as such wholesale and retail merchants.**

No prosecution shall be commenced under the above section 520, without the fiat of the Attorney General for the province in which the charge is laid.

Wholesalers' Co-operation Asked.

The report as read by G. H. Clark, Niagara Falls, introduced an interesting discussion and on motion of Messrs. Wrigley and Ricard it was decided that the report of the committee should be received and adopted and that copies be sent to every member of the association, and to the secretaries of the Canadian Wholesale and Western Canada Retail Hardware Association and that the Executive be given power to co-operate with these bodies in sending a joint deputation to Ottawa to present the association's desires to the Dominion Government. On suggestion of Mr. Paulin a copy of the resolution will also be sent to the Retail Merchants' Association. Each member of the association will also be requested to urge the amendments to the Criminal Code to their local representative in Parliament.

Dominion Organization.

President Humphries read the following letter received from the secretary of the Western Canada Association as authorized by the recent convention at Winnipeg.

Letter from Winnipeg.

To the President, Officers and Members of the Ontario Retail Hardware and Stove Dealers' Association.

Gentlemen :—I am instructed by the Western Retail Hardware & Stove Dealers' Association, now in session, to convey to you their appreciation of your kindness in sending to our convention a representative from your association, in person of your secretary, Mr. Weston Wrigley.

They desire me to express to you the great pleasure they feel in welcoming him among us, and wish you to accept their sincerest wishes for the welfare and prosperity of your association. They trust that the movement made at this convention towards the formation of a Dominion Hardware Association will meet with the hearty support of your association. Again thanking you for the pleasure afforded us, I remain,

Yours fraternally,
J. E. McROBIE, Secretary.

Winnipeg, July 25, 1906.

A letter was also received from J. C. McRobie, secretary of the Western Association relative to the forming of a Dominion hardware association. A resolution was adopted favoring the proposed organization, and it was decided that the Executive have power to deal with the subject in the interval prior to the next convention of the association.

In the discussion of this subject it was felt by the delegates that the proposed Dominion organization would strengthen the provincial associations and a mutual insurance plan could be worked out which would easily provide sufficient funds to carry on a strong Dominion organization. The financial benefits derived from the insurance rebates would hold the members together just as the insurance feature is the backbone of the fraternal societies.

Special Committee's Report.

C. E. Noble, Dundalk, reported the results of the conference with the jobbers' committee and after some discussion it was decided that the association would defer action in the matter of cartage charges until the reply of the Wholesale Hardware Association was received, in the meantime each member acting in the matter as he saw fit. Several members reported that they had saved from $5 to $25 by refusing to pay the cartage charges since the organization of the association and they intended to continue to refuse to pay the charges as a matter of principle. It was also decided that the Wholesale Hardware Association would be asked to co-operate in securing favorable action regarding the request made of the enamelware manufacturers.

J. W. PEACOCK, Toronto
Auditor, Ontario Retail Hardware and Stove Dealers' Association.

Account Collection System.

The collection of accounts and bad debts was taken up, and the manner in which the Western association dealt with delinquents was brought before the meeting. Their plan as outlined a fortnight ago in these columns, provides for a collection agency in connection with the association through which, personal attempts having failed the case is taken up and proceeded with in the courts and the delinquents name circulated on a list to all other hardware merchants in the association.

A special committee composed of C. E. Noble, Dundalk, W. B. Clifton, Alliston, and E. P. Paulin, Goderich, were appointed to consider this matter and bring in a report at the convention next March.

Profits and Costs.

Fred C. Lariviere, of the firm Amiot, Lecours and Lariviere, Montreal, who had taken more than an active interest

in the convention on request of president Humphries, delivered an interesting address on "Profits and Costs," by which a dealer could pay his expenses and lay by a little for a later date.

"The mistake is too often made," said the speaker, "in marking all merchandise at a fixed advance on cost for profit. Take padlocks for instance. If you marked them at an advance, say of 33 1-3 or 40 per cent., there are lines that you would have to sell at 8, 10 and 12 cents instead of 10, 15 and 20 cents. It is not a safe course to pursue, to mark goods in this way without regard to their respective classes. One should allow for each article the margin of profit he sees fit. Lines that sell daily can perhaps be struck at a regular percentage of profit that would be insufficient for goods that do not meet with such ready sales, but which have to lay on the shelves for a long time. The same thing applies to cutlery and other lines.

With me it is always a matter of judgment as to what the goods will bear. I have seen carving sets that cost me the same amount sold at $6.00 and at $7.50, simply because one had the appearance that would bring just that much more profit than the other. Had the regular rate been struck for both their selling prices would have been the same. Many merchants sell files on a very small margin. You should grade them as far as you can by sizes, advancing the margin of profit on the large sizes which are not so saleable and putting a smaller price on the sizes which are sold daily. Sell them at a fair profit, with more profit on the goods that do not move so quickly, and tie up capital. In scissors everyone knows that sizes 5, 5½, 6 and 6½ inch, and sizes 7 and 8 inch in shears are the saleable sizes. While you make a fair profit on the sale of small sizes you should make a larger profit on the larger lines because they are more unsaleable stock. When buying galvanized iron, many forget about the hoops. In each bundle the hoops weigh considerable. Many lose sight of this. Then the outside sheets are not as good as the others, which is another thing that should be borne in mind and provision made for.

In collecting accounts it seems to me that the country storekeeper should have a better system than is at present in use. In Montreal there is not a house that does not render its statements monthly. This is the only feasable plan of looking after collections, and there is no doubt that making our collections promptly means a lot of interest on money, but that we can save every year."

General Discussion.

Mr. Westcott asked what should be the total cost of doing business per year in relation to the total sales. During seven years of his experience, when figuring out the percentage of cost to the sales he found that the profits were not over from 15 to 18 per cent. In the speaker's opinion, which was echoed by those present, they sold altogether too low in many lines. He spoke of the much vexed question of nails, for which they paid $1.95 and 10 cents for delivery, and sold at $2.15 and even less.

Vice-president Scott thought that if the retailers stood by the wholesalers the wholesalers would stand by them in the matter of selling goods to those who were not in the trade.

A hearty vote of thanks was tendered Mr. Lariviere, for his assistance and advice during the convention, and the benefit he had conferred upon the Ontario hardwaremen through his address, several stating they would go back to their businesses to put into practice the helpful suggestions he had given them.

The convention adjourned at 11.30 a.m. to meet again on the second Tuesday in March, 1907.

CONVENTION NOTES.

The Mutual Insurance and Executive Committees met during Tuesday morning and prepared their reports for presentation to the convention in the afternoon.

Many well-known members of the association wrote saying that they regretted being unable to attend the convention owing to sickness or because of shortage of help on their selling staff.

The absence of second vice-president Hambly, of Barrie, was regretted by all.

F. W. JEFFERY, Midland

Member Executive Committee Ontario Retail Hardware and Stove Dealers' Association.

Another attack of the sickness from which he has suffered all summer incapacitated him on Friday before the convention.

"F. O. B. Cars. We will not pay cartage at shipping points," reads a rubber stamp used by one of the members of the association. Every order he gives to a jobbing house is made out on his own order forms (he refuses to allow the traveling salesman to make out the order) and every order is stamped with the words quoted at the first of this paragraph. The rubber stamp cost 25 cents and the member says it has already saved him over $15—enough to pay his membership fee in the association for five years.

"I am greatly pleased with the way you Ontario retailers conduct your association work. No waste time and everything to the point. Your association deserves to succeed and I wish it abundant success," said Fred C. Lariviere, of Montreal, before returning to the Royal City. Mr. Lariviere is both a wholesaler and retailer and would hold his own in any company. Every delegate admired and appreciated his able advice and recognized in him a thorough French Canadian gentleman.

Under president Humphries' chairmanship the business of the convention went along swimmingly. There were few waste moments during the convention.

"A wise old head on young shoulders" was the general opinion expressed regarding J. Walton Peart of the St. Mary's Hardware Co., whose work on The Mutual Insurance Committee, in drafting plans for the collection of accounts, on the Executive and during the convention, was of very high order.

Vice-president Scott, of Mount Forest, always appeared to say the right word at the right time.

T. D. Latimer, of Latimer & Elliott, Chesley, was formerly a member of The North Dakota Retail Hardware Association, of which H. M. Joy of the Joy Manufacturing Co., was formerly president. Mr. Latimer is an enthusiast in association work and will be a valuable member of the association.

The two Smiths—J. D., of Baysville, and Robert, of Bolton—took an active part in the convention, being heard from at opportune time.

C. E. Noble, of Dundalk, marked himself out for future advancement by his work during the convention. Mr. Noble was particularly strong in urging that hardware dealers should write fully to the jobbing houses regarding every complaint they should have to make. Whenever a jobbing house or manufacturing concern sells a line of goods to a consumer in his district Mr. Noble always makes a point of writing the jobbing house for a credit note on the transaction. He recently discovered a case where a manufacturing concern represented in his town by one of his competitors had sold some goods to a private consumer, he notified the competitor and urged him to ask for a credit bill, the competitor doing so and secured the amount asked for.

D. A. MacNab, Orillia, Fred W. Otton, Barrie, and Henry Jones, Uxbridge, were three able representatives from the district north of Toronto, being heard from at opportune times during the convention.

G. D. Clark, Niagara Falls, ably represented the Niagara district at the convention and made an excellent chairman for the Resolutions Committee, the other members of which were W. B. Clifton, of Alliston, G. A. Westcott, Ailsa Craig, both of whom are active, energetic members.

New Ontario was ably represented by T. A. Ricard, Verner Robert Lillie, Sturgeon Falls, and T. R. Lougheed, Gore Bay.

The members of the Executive Committee were invited to be the guests of the Industrial Board and Directors' Luncheon on Wednesday afternoon. Those who participated in this closing event included: President Humphries, vice-president Scott, secretary Wrigley. The Executive members were Peart & Paulin and Messrs. Fred C. Lariviere, of Montreal; C. E. Noble, Dundalk; W. B. Clifton, Alliston; J. E. Westcott, Ailsa Craig, and T. D. Latimer, Chesley.

HARDWARE TRADE GOSSIP

Quebec.

J. A. St. Amour, Montreal, has registered as an electrician.

S. M. Jean, of St. Boniface, Man., advertises his hardware stock for sale.

F. H. Tallman & Co., hardware merchants, of Red Deer, Alta., have dissolved.

W. M. Butchart, hardware merchant, of Content, Alta., has sold out to R. B. Wilkins.

A. Bournival, general merchant, of St. Barnabe, was in Montreal on business this week.

F. W. Teggatt has disposed of his hardware business at Rosebank, Man., to A. H. Baker.

Mr. Cowan, of the Traders' Co., hardware merchants, Buckingham, visited Montreal this week.

Sam R. Brewer, secretary-treasurer of Thos. Robertson & Co., Montreal, is away on his vacation.

T. Bedard, foundryman and hardware merchant, of L'Assomption, paid a short visit to Montreal a few days ago.

W. H. Martin, of Caverhill, Learmont & Co's western traveling staff, visited headquarters at Montreal last Saturday.

Mr. Moulden, general sales manager of the Taylor-Forbes Co., Guelph, Ont., called on the Montreal jobbers on Thursday.

L. I. Matts, general merchant, Buckingham, was a visitor at some of the hardware warehouses in Montreal this week.

Mr. Miller, of Miller, Morse & Co., wholesale hardware merchants, Winnipeg, was in Montreal for a few days this week.

Mr. Percival, of Mundle & Percival, general merchants, Kemptville, Ont., was a visitor at the Montreal wholesale warehouses this week.

Wm. Paterson, of Baxter, Paterson & Co., manufacturers' agents, Montreal, spent a few days in Toronto this week in the interests of his firm.

D. M. Leyden, formerly with Purvis Bros., Sudbury, and now with James Clinkskill, Saskatoon, Sask., spent a few days in Montreal this week.

The Canadian Fairbanks Co. are installing a suction gas plant for supplying power and lighting in the new Henry Morgan building on Beaver Hall Hill, Montreal.

M. S. Sutton, hardware merchant, of Andover, N.B., visited some of his business connections in Montreal this week, while returning from the Toronto Exhibition.

Mr. Cameron, of Cameron & Co., hardware dealers, Charlottetown, accompanied by his wife, stopped over a day in Montreal on his way to the Toronto Exhibition.

E. C. Dingman, advertising manager of Frothingham & Workman, Montreal, took advantage of Labor Day to enjoy a brief visit in Toronto and other Ontario cities.

At the annual meeting of the Montreal Reduction & Smelting Co. of Canada the following directors were unanimously elected: J. E. E. Leonard, M.P.P.; J. H. Brown, O. Lemire, Benjamin Burland, L. J. Carter, O. Robert and P. A. Theriault.

W. E. Forbes, general merchant, of Richibucto, was in Montreal a few days ago while returning from the Dominion Rifle Association's meet at Ottawa. Mr. Forbes is an enthusiastic military man and he generally spends his vacation in this way.

Geo. D. Wood, of Geo. D. Wood & Co, Winnipeg, has returned home from an extended trip in England. Mr. Wood was one of Winnipeg's representatives at the Congress of the Chambers of Commerce of the Empire, held in London in July. His friends are glad to know that his health is much improved.

E. D. Horsfall, of Caverhill, Learmont & Co's Montreal staff, left last week to travel for a western firm. Before leaving his old firm he was presented with a fine leather grip, J. R. Terrill making the presentation on behalf of "the boys." He will be succeeded in the sample room by David Brewer.

Ontario.

A. M. McKay & Co., Brussels, have been succeeded by McKay & Shaw.

C. F. Smallpiece and Mr. Griffin, of Lewis Bros., Montreal, were in Toronto during the week.

Mr. McGregor, of McGregor & Reid, plumbers, Peterborough, was in Toronto during the week.

D. H. Howden, wholesale hardware dealer, London, spent a couple of days in Toronto this week.

Wm. Vallance and S. H. Alexander, of Wood, Vallance & Co., Hamilton, visited Toronto on Tuesday.

C. A. Whitwam, of the Hobbs Hardware Co., London, was a visitor in Toronto during the week.

Geo. Matthewson, hardwareman, 734 Queen street east, Toronto, has been spending a couple of weeks at Muskoka.

F. W. Spink, Chicago, representative of the Sporting Goods Dealer, St. Louis, was a caller on Hardware and Metal on Thursday.

The McLennan Paint & Color Co., Hamilton, have changed their firm name to Dominion Paint Co. and have become incorporated.

G. A. Ferguson, S. W. P. pusher for S. A. Crawford, St. Thomas, was a caller at the Toronto office of Hardware and Metal on Tuesday.

The Peerless Furnace Co., formerly of 495 Queen street west, Toronto, are now located in their new building at the corner of Euclid avenue and College.

E. C. Dingman, advertising manager for Frothingham & Workman, Montreal, called at the Toronto office of Hardware & Metal on Thursday. Mr. Dingman has been taking a week's holidays and sought rest at Hamilton and excitement in Toronto.

Amongst the many hardware and stove dealers who visited the Toronto Exhibition during the past week Hardware and Metal noticed the following:

J. J. Coffee, Barrie.
D. Courville, Maxville.
J. Ballantyne, Brantford.
A. Bechtel, Baden.
T. D. Latimer, Chesley.
G. A. Henry, Oshawa.
Robt. Smith, Bolton.
F. A. Ricard, Verner.
W. B. Clifton, Alliston.
G. H. Clark, Niagara Falls.
D. A. McNab, Orillia.
Jas. D. Smith, Baysville.
C. E. Noble, Dundalk.
J. E. Westcott, Ailsa Craig.
J. W. Peart, St. Mary's.
A. W. Humphries, Parkhill.
L. Wale, Stevensville.
T. R. Lougheed, Gore Bay.
J. S. Allen, Burlington.
Adolph Henry, Orono.
F. W. Otton, Barrie.
E. P. Paulin, Goderich.
W. G. Scott, Mount Forest.
F. Marshall, Orangeville.
McMillen Bros., Guelph.
Mr. Ross, Cannington.
A. Child, Gravenhurst.
W. Akitt, Jr., Creemore.
J. Ritter, Millbank.
G. McLean, London.
E. Brasford, Welland.
A. Wagner, Arnstein.
Mr. Taylor, Dromore.
John McKay, Chatsworth.
A. E. Nichols, Fergus.
F. Anthony, Norval.
Mr. Tomlinson, Thornton.
S. E. Eakins, Millbrook.
G. H. Roblin, Brighton.
N. J. Clancy, Gravenhurst.
H. P. Merrick, Mitchell Square.
J. Murphy, Lindsay.
D. S. H. Becker, New Hamburg.
R. J. Walkem, Tottenham.
J. A. Griffin, Alma.
Chas. Reynolds, Bethany.
D. W. Douglass, Campbellford.
Messrs. McLaughlin Sturtridge, Drayton.
H. H. Johns, Southampton.
Mr. Newman, Castleton.
J. M. Gilpin, Lefroy.
F. A. Campbell, Mitchell.
T. H. Dunn, Ingersoll.
C. J. Mitchell, Brantford.
H. W. Brown, Plattsville.
J. A. Good, Berlin.
D. McConnell, Hillsburg.
J. Pratt, Heathcote.
J. Huffman, Markham.
Wm. Kelterborn, Wellesley.
E. H. Kelsey, Loring.
R. C. Fair, Brampton.
W. J. Stanways, Beeton.
G. Williamson, Simcoe.
J. Arthurs, Commanda
C. Shaw, Klienburg.
A. S. Wideman, Markham.
F. W. Silvester, Stouffville.
N. J. McMurtry, St. Thomas.
J. B. Ferguson, West Lorne.
H. E. Patterson, Drayton.
Robt. Lillie, Sturgeon Falls.
H. Jones, Uxbridge.
J. Dandie, Streetsville.

A LIVE ORGANIZATION.

The successful convention of Ontario retail hardwaremen in Toronto this week, held in the rush of a busy Exhibition season, proves the organization to be a live one. Measured also by the yardstick of results already accomplished and by the probable results of the next six months, the executive officers and members of the association have every reason to congratulate themselves.

Organized less than five months ago the Ontario Retail Hardware and Stove Dealers' Association already has over 150 members enrolled and has succeeded in securing the discontinuance of objectionable market reports in the daily papers. Several matters have also been taken up with the enamelware manufacturers and wholesalers, and while the retailers may not gain all they ask, they are certain, through organization to gain all that they are in equity entitled to.

There are strong arguments both pro and con on the matter of packing and cartage charges, but the retailers have an undoubted grievance when they point out that these charges are not evenly distributed, many city and country customers escaping while the vast majority pay the charges in full. Both of these charges are fixed amounts and the retailers contend that they should be borne by the wholesalers just as the retailers charge their twine, wrapping paper and local delivery to their general expense account. The jobbers, on the other hand, contend that they merely charge the bare cost of the boxes used in packing and that if the charge is added on in the cost of the goods the dealer is apt to pay even more than at present. As to cartage charges the jobbers point out that this charge was established by Act of Parliament and they have not the power to change it. The weighing of each parcel would entail considerable labor on the part of the jobbers, who feel that the present arrangement is a satisfactory one. Although taking a strong stand in unanimously refusing to pay cartage charges in future, the retail association took wise action in deciding to defer action until the jobbers had considered the matter further at their coming convention.

The request made regarding the sale of goods to persons outside the trade seems to be reasonable and while the jobbers point out that many retailers encourage this evil by buying direct from manufacturers, wise action would be taken in meeting the request made. The jobbers and retailers must stand together and work in unison against every tendency to weaken either branch of the trade. As an assembler of goods the jobber is a necessity to the retailer. On the other hand the destruction of the retail trade by mail order or jobbers' list houses buying direct from manufacturers would mean the death blow to the jobbing trade.

Likewise the enamelware manufacturers will find it to their best interests to accept the suggestion made by their best customers—the retail trade. The flooding of the market with enamelware seconds not marked as such, is bound to do serious damage to a Canadian industry, which should be fostered by all branches of the trade.

One of the most important proposals made at the convention was that of Mr. Lariviere, of Montreal, who suggested that if the difficulties in the way of forming a purely hardware dealers' mutual company were found to be too great that arrangements be made with one of the existing old-line companies or with an insurance underwriter that all the insurance of the members of the association, up to a limit of $10,000 for each firm, be placed through the secretary. Mr. Lariviere felt certain that in case such an arrangement were made that a refund of 20 per cent of the premium could be allowed each dealer at once, while an additional percentage could go into the association treasury on an arrangement providing for a division of profits between the underwriters and the association, the latter acting in the capacity of an agent. All this could be done without the risk of any money whatever, and the dealers getting a rebate on policies amounting to $10,000 instead of the limit of $1,500 or $2,000, which a mutual company would have to name. The rebates on these policies would be sufficient to pay the dealers' membership fees in the association as well as providing an additional saving. The proposition is well worthy of consideration and the committee having the matter in hand should have the hearty co-operation of every hardware dealer in the province.

No doubt many merchants have been withholding their membership until it was clear that the association would do something more than get together and talk. Such merchants should be able to see now that there are earnest and able men working unselfishly for the association and that they are deserving of the support of every broadminded and progressive hardware dealer in the province.

Hardware and Metal congratulates the Ontario association on its steady progress and upon its endorsation of the proposal to form a Dominion organization, the working expenses of which should easily be met by the savings made on the insurance premiums as a result of the members co-operating together on some such plan as is being considered by the association.

CUTTING IN WIRE NAILS.

Frequent mention has been made in these columns of the disposition shown by manufacturers, jobbers and retailers to cut prices on wire nails. During the Summer cutting was particularly lively in this line, and competing interests vied with each other in forcing quotations down to the lowest possible level. In fact, during a season which was, on the whole, more free from price-cutting than any other for years back, the wire nail stands out pre-eminently above any similar competition.

As a general thing, there is a difference of about thirty cents between the American and Canadian base price for wire nails. This discrepancy has been generally accepted by the trade as marking pretty well the difference in the cost of production. But things have changed during the past few months. Prices have been crowded down to such an extent that manufacturers now feel they have touched rock bottom. And so retailers find, in comparing prices on wire nails quoted in the United States trade papers

with those actually being given here, that there is now practically no difference in the two countries. This mere comparison shows in how abnormal a condition the Canadian wire nail trade is at present.

BANK SOUNDS A WARNING.

A period of prosperity such as has been experienced in Canada for some years past is not an unmixed blessing That is to say, while it affords wonderful opportunities for betterment to men of shrewdness and foresight, it also increases the temptation to spend prodigally money which is easily made. Going a step farther, it also creates an inclination to assume financial responsibilities, to borrow money in unusual amounts, because prospects for meeting these obligations appear to be good.

A mania for speculation is another circumstance attending "good times." In the Great West this has been carried almost to an extreme in these days of rapidly advancing land values. Merchants frequently complain that farmers instead of using the proceeds of a season's harvest to reduce their liabilities, sink them in land speculations, buoyed up by the hope that they will quickly realize large profits.

Similar conditions prevail in the east. Expansion is everywhere the watchword. Those who cannot enlarge their capacity on their own resources have found the banks competing with each other to supply the necessary money, and debts have been incurred which would cripple many of these expansionists should the "growing time" receive a sudden check.

Under the circumstances, a memorandum which was recently sent out to branch managers by the general manager of a leading Canadian bank will be of considerable interest and we feel justified in repeating it, for the benefit of our readers.

This well-known financier speaks as follows:

"Now that the time is drawing near for the harvests of Ontario to be marketed, I consider it an opportune time to draw your serious attention to the existing conditions of business in all its branches throughout Ontario, and to impress upon you the fact that the management of this institution insists that you exercise the utmost caution in the granting of credits, and unceasing watchfulness over credits already granted, during this period of what might be termed a 'revel of prosperity.' Merchants manufacturers, cattle buyers, grain merchants, and, in fact, all classes of the commercial community are apparently straining at the leash of credit and it is the duty of every banker, not only to his bank, but to the country at large, to judiciously control this financial impetuosity. I would have you see that as far as possible the returns for all goods marketed this Winter go to reduce your customers' existing liabilities, urging on them to 'put their house in order' while this period of rich production lasts, and to exercise economy in order to start with greatly lessened liabilities next Spring, in case bad harvests should be Canada's lot next Fall."

FOREIGN TRADE INCREASING.

A recent report issued by the Dominion Government gives to the public some interesting information on the foreign trade of Canada during the month of July. The aggregate foreign trade during that month amounted to $41,996,228, which is over nine million dollars ahead of the same period in 1905. In a young and growing country like Canada such an increase as this in the volume of trade transacted speaks well for the future of commerce between the Dominion and other countries. Canada is rapidly rising in the commercial firmament, and her products, which only a few years ago were comparatively unknown outside of the British Empire, are now recognized as being pretty nearly the best obtainable. The trade mark "Made in Canada" is acquiring a significance of great value to exporters, a significance which, if maintained, will be of untold value in the future. Imports for the month in question amounted to $23,652,122, while domestic exports wete $16,549,548, increases, respectively, of $5,172,357 and $3,500,099. Animals and their products showed the largest increase in exports, being $1,555,421 ahead of the corresponding period last year. In the export of fish products there is a falling off noticeable, but in agricultural products and manufactures there are substantial increases.

VACATION TIME.

The holiday season is about over and more dealers have taken a vacation this year than ever before, according to the commercial travelers. This willingness of the retailer to break away from business for a week or two is said to be one of the results of the prevalent prosperity.

Whatever the reason, it's a good time now to take a reckoning. Didn't it pay? Mentally and physically a man is the better for a change occasionally. He comes back with renewed energy and brightened ambition.

The wife should have a vacation too. Men are apt to forget that housekeeping can become as monotonous as business. To a woman it's pretty nearly as good as starting all over again to come back after a few weeks visiting away. If husband and wife can get away together so much the better.

Then there are the clerks. Good clerks are mighty hard to get and the grocers are partly to blame. They should take more interest in the men who work for them. No sort of business effort would pay better. A clerk who doesn't take an interest in the business isn't worth much. A good clerk needs a vacation and deserves it and it will pay his employer to see that he gets it with his wages in advance to help make it enjoyable.

While business is important, health is much more important and that is a fact many men forget. A vacation rightly spent will make for health every time, and the better health a man has the better grocer he will make. Settle it now, that good times or bad times the vacation is to be an annual affair.

LOW WATER AFFECTING SHIPPING

Low water in the port of Montreal is affecting the shipping trade. For the past week or so none of the large boats have been able to load capacity on this account, being restricted by the port warden. As a consequence shipping companies find it necessary to exercise considerable care in making bookings. Several companies when spoken to by The Grocer stated that they had been compelled to exercise the greatest discretion in loading their vessels, in some cases having to refuse shipments of particularly heavy goods. Most of the vessels which have cleared Montreal recently have had either short cargoes or else were loaded with light goods which took up all space in the holds without being too heavy.

When asked the cause of the low water, the port warden stated that the continued dry weather was chiefly responsible for it. Rains this Spring and Summer had been few and far between. It is improbable that conditions will be bettered this year, so that low water will affect the shipping during the remainder of the season. At the present time the water is sinking at the rate of about an inch a day, consequently if this continues the river will be considerably lower than it now is before the season finishes. It is nearly ten years since like conditions prevailed, and shipping companies feel that it is hard lines, particularly since the outlook for the remainder of the season is so bright.

Hardware and Metal Conditions in Manitoba

(Market quotations corrected by telegraph up to 12 a.m. Friday, Sept. 7, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

Trade continues active in all general lines, ammunition and general sporting goods supplies being in particularly active demand. Values are steady.

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Retail prices are being cut below cost in many towns, but wholesale prices are held steadily at prices quoted: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE — We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ½ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅝ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅝ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅝ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ⅜, $4.10; ¼, $7.20; ⅜, $4.60; ½, $4.30; ¾, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—Discount on "Irwin" bits is 47 1-2 per cent., and on other lines 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES—As noted last week, the price is now 1 1-2c. per lb. A decline of 1-4c.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

CLEVISES—Price is now 6 1-2c. per pound.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discount is 50 per cent.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows; Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Quoted now at 4c per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC.—With the beginning of the shooting season business is very active in ammunition and general supplies. Quotations are: Cartridges, Dominion R. F., 50 and 5; Dominion, C. F., pistol, 30; military, 20; American R. F., 33½; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.25; chilled, $7.75; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—Prices are: Bar iron (basis), $2.50; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jesson, $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—Prices are very firm. $5.25 per cwt. with a reduction of 25c. per cwt. on ton orders.

AXLE GREASE—"Mica" axle grease is quoted at $2.75 per case, and "Diamond" at $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are quoted as follows: Silver Star, per gal., 21c.; Sunlight, 22c.; Eocene, 24c.; Pennoline, 25c.; Crystal Spray, 24c.; Silver Light, 22c.; gasoline, 70-72 (engine), 25½c., in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE

—We quote : White lead, pure, $7 ; bladder putty, in bbls., 2½c. ; in kegs, 3¾c. ; turpentine, pure, in barrels, 97c. ; less than barrel lots, 92c. ; linseed oil, raw 64c. ; boiled, 67c.

WINDOW GLASS—We quote : 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25 ; 26 to 40, $2.40. 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4.00 ; 26 to 40, $4.52 ; 41 to 50, $4.75 ; 50 to 60, $5.25 ; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35 ; 41 to 50, $8.40 ; 51 to 60, $9.45 ; 61 to 70, $10.50 ; 71 to 80, $11.55 ; 81 to 85, $12.60 ; 86 to 90, $14.75 ; 91 to 95, $17.30.

Canada Stove Co. have been incorporated under Ontario charter with a capital stock of $150,000 for the purpose of manufacturing stoves, ranges and furnaces. The provisional directors are F. J. Travers, G. Tomlinson, G. A. Mothersill, F. R. Yule and J. A. MacCracken, with head office at Ottawa.

GREATEST ANNUAL FAIR

Canadian National at Toronto Without an Equal in the World as a Yearly Exhibition—How It Started Its Splendid Educational Value—Success This Year Unparalleled—Education in the Art of Display and Decoration.

Ideal weather, record crowds, more and finer displays have put this year's Canadian National Exhibition at Toronto away beyond any former achievement. The greatest annual exhibition in the world is now its rightful name beyond all doubt. People who see it year after year get used to it and fail to appreciate its superiority. A Toronto teacher had some American friends visiting him this week. They had taken advantage of the low fares without any thought of the exhibition. When invited out to the fair they thought it wasn't worth while and impressed their host and hostess with the great things to be seen in New York and other American cities. They were persuaded to go, however, and a short time on the grounds put an end to the talk about what they had seen elsewhere.

There were exhibitions in Toronto before 1879, but it was in that year the present exhibition was started. Hamilton was the first place in Canada to undertake an annual exhibition, and Toronto got the idea there. In 1877 the Provincial Exhibition, an itinerant fair, was held in Toronto. The city made an arrangement with the Agricultural and Arts Association to conduct an annual fair on condition that certain buildings were erected. The city did its share but the society got cold feet and drew out. Some public-spirited gentlemen took the matter up and decided to go on with it. The exhibition of 1879 was opened in the present grounds by the Marquis of Lorne. Many mistakes have been made in the 30 years and a good deal of money has been expended ill-advisedly, but the present exhibition is worth far more than it has cost in money and public-spirited effort. It is estimated that there is now in buildings alone an investment of a million and a half dollars.

Educational Value of Exhibition.

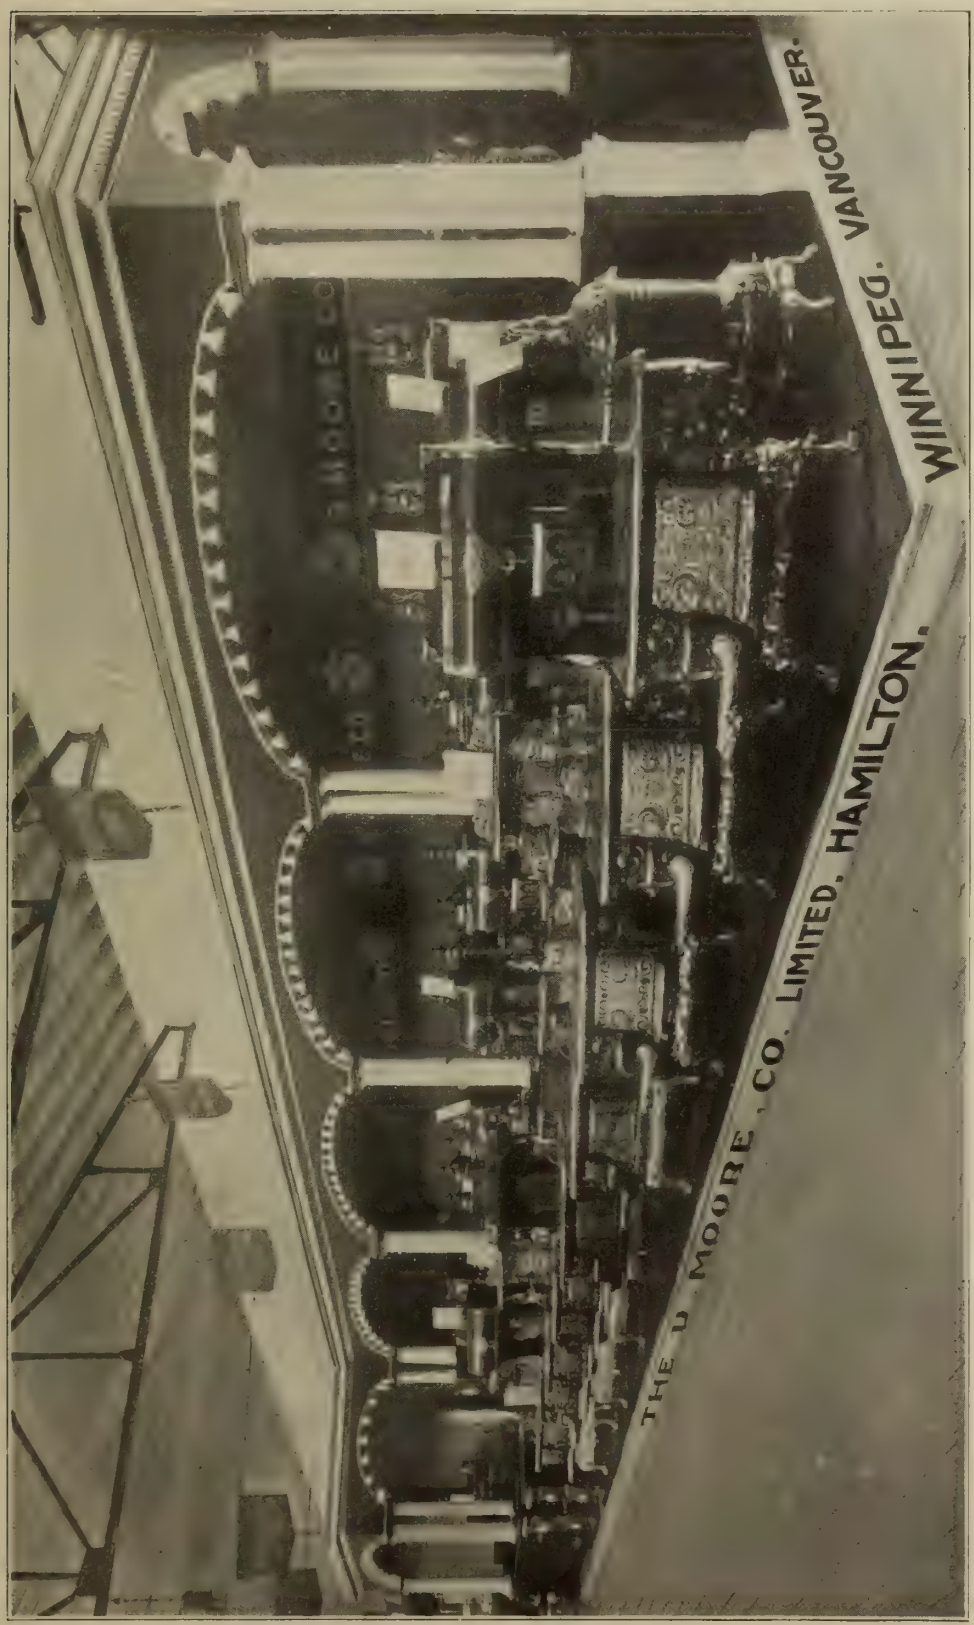
There is not a business interest in Canada not touched by the fair and every year it becomes a larger factor in the agricultural, industrial and mercantile life of the Dominion. In 1880 there were 8,234 exhibits. This year there are over 8,000 animals alone on exhibition. The educational value of the fair cannot be computed. A teacher walked into the exhibit of West Indian products and said to Mr. Pickford, who is in charge: "Have you any more of those booklets about the West Indies? I got one myself, but I would like one for each of my pupils." There was a pebble of knowledge thrown into the young life of Canada to cause ever increasing ripples of learning. That is but a very minute instance of the educational value of the exhibition.

For hardwaremen the chief attractions were to be found in the new Process Building and particularly in the stove section of this handsome new structure. The stove manufacturers have entered into the spirit of progress pervading the exhibition in recent years and some particularly fine permanent exhibit booths have been erected. Year by year the quality of the exhibits of heating goods are improving and new faces are seen each year, the difficulty being to give all the desired space in which to display their goods to good advantage.

In other parts of the Process Building also were to be found exhibits of metal shingles, enamelware, plumbing supplies, hardware shelving, implements, lighting fixtures, oil pumps, wind machinery, canoes and launches, swings, and other lines, which were inspected with interest and profit by hardware dealers.

Canadian National Exhibition—Mechanical Figure at Main Entrance of Manufacturers' Building.

In Machinery Hall, too, were many exhibits of marked interest to the hardware trade manufacturers of metal goods, belting, etc., being shown, while bathroom fixtures were displayed here as well as in the Manufacturers Building, where exhibits of silverware, aluminumware, metallic roofing, horsenails, lighting fixtures, paints and oils, office appliances, etc., attracted much attention. In the Transportation Building the rubber companies, carriage varnish manufacturers and similar lines were to be found.



On the grounds the wire fence manufacturers did not seem to be in the usual force, but the roofing, tent and implement concerns were well represented. Taken altogether, the hardware merchant found the displays made well worthy of study and a general advance on prevoius years was noted.

The loan exhibition is a feature that cannot be too highly prized. There are gathered pictures from the public galleries and private collections of Great Britain that otherwise would be quite unavailable to the great mass of the people who see them at the exhibition. Canada is too young a country to have fostered art a great deal, but true appreciation of fine art is a quality in a people or an individual greatly to be desired. Nothing could better advance the cause of art than these loan exhibitions.

Next year it is expected the departments of horticulture and floraculture will be newly housed and a decided impetus will be given to these important departments.

One of the most instructive and interesting exhibits is that of West Indian products in the Process Building. It contains upwards of 2,500 examples of the agriculture and manufacture of the Carribean Archipelago. Most of them are foodstuffs but there are many samples of cotton commercially recognized as the best in the world. The whole has been arranged and is under the direction of Mr. Pickford, of Pickford & Black, whose line of steamships is the principal means of communication between Canada and the Indies. The display is a credit to his taste and judgment. Though a little too confined for the best results the public are admitted within the enclosure and may examine as minutely as they please the hundreds of articles.

The exhibits and their housing in the Manufacturers' Building are this year finer and more elaborate than ever. In the aggregate a great sum of money must have been expended in providing these displays. For an observant merchant a trip through that building is in itself an education in the art of display and decoration.

Canadian National Exhibition—D. Moore Company's Stove Exhibit.

D. Moore & Co's Exhibit.

D. Moore & Company, Hamilton, had an exhibit which was hard to beat. Their Art, Empire, Crown and Ruby Treasure heaters, all self-feeding, with and without ovens, drew the attention of thousands of passers by each day.

The Art Treasure is one of the most beautiful of heating stoves and is equipped with all that is new and substantial in the way of improvements. The screw draft is a feature that quickly appeals to the customer on account of the saving in fuel that can be effected by such a finely adjusted draft controller. The shaking ring and dumping grate in the Treasure heaters have but to be seen to be appreciated. There is nothing complicated about them—nothing to get out of order.

The Empire Treasure is different in design from the Art Treasure, but has all the virtues of the Art, in so far as improvements and ease of operating are concerned. The Crown Treasure is smaller than the Empire. Its large sales bespeak its merit. It is claimed that the Crown is in more homes in Ontario than is any other stove.

The Ruby Treasure is the smallest self-feeder with oven attached to be found in Ontario to-day. It strikes one at once as having all the elements of a splendid heater, while at the same time having such a "cute" appearance that it attracts immediate attention.

Among their cheaper lines is the Oak Treasure, a stove that retails for $12, and is well worth it. Moore's air-tight is a beauty to look on, but utility is its long suit. It is of the down draft type, which insures the maximum heat from any fuel, on account of burning all gases arising therefrom, which, as stove men know, produce the greatest heat.

The D. Moore Company's ranges received equal attention with their heaters. They go under the names of the Home Treasure, the Household Treasure, the City Treasure, and the Matchless Treasure.

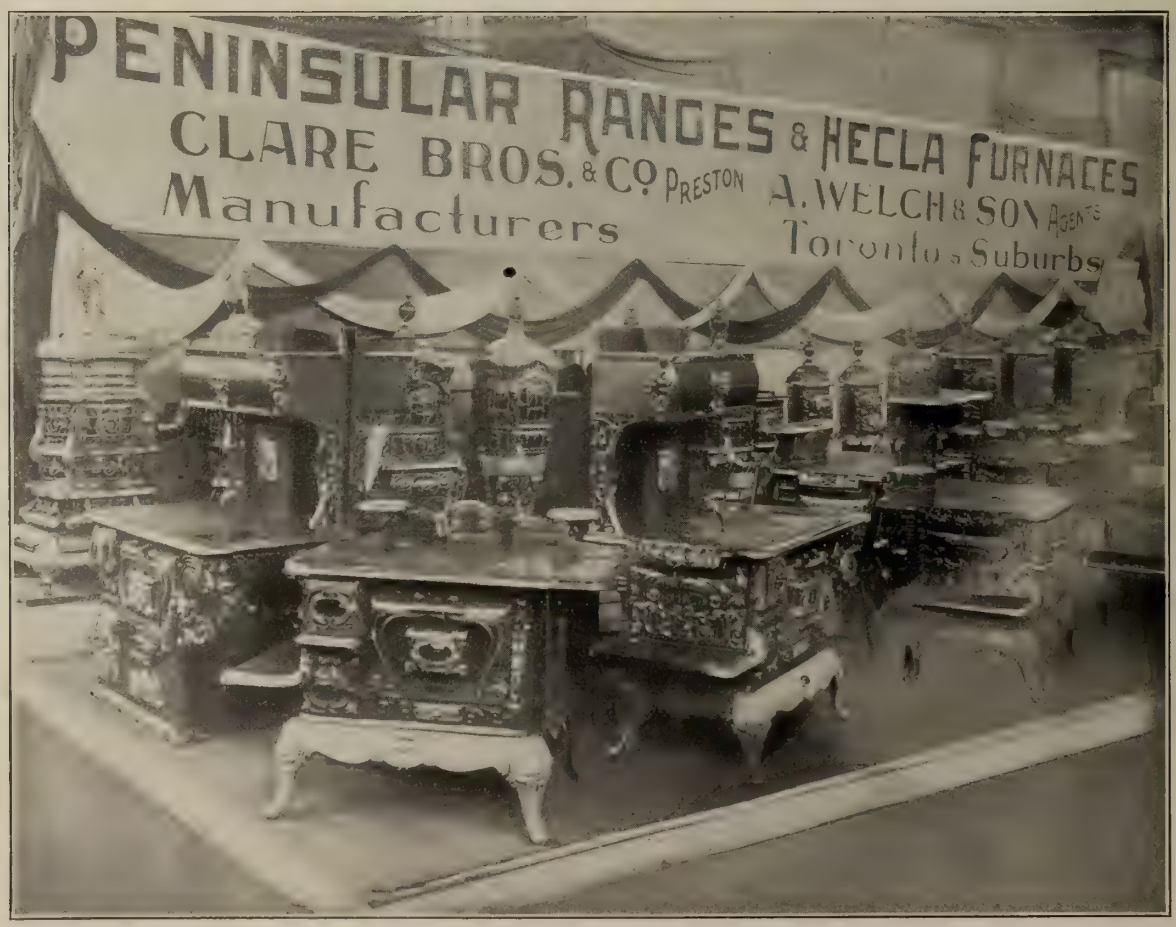
The Premier steel range is the finest steel range made in Canada, double body, lined with asbestos between the steel, and has all the latest features in firebox and grate construction. They also show in smaller steel ranges the Sunset and Domestic Treasure, which are of the latest design.

The Western Treasure is a range that has found great favor in Western Canada. It has a large oven, and will burn anything in the way of fuel. The device employed by the Moore people for holding up the front top without the aid of a poker, or the burning of one's fingers, is a boon to the housewife when making toast or broiling meats over the coals. The reservoir, nickel attachments, etc., are all detachable on the Treasure stoves. In fact, there seems to be no good thing that is overlooked in their make-up.

The exhibit is under the charge of Mr. Parrish and Mr. Munro, their eastern and northern travelers.

The exhibit, as will be seen from the illustration, was one of the handsomest in the building, the company going to great expense in getting up a permanent stand which would be a credit to them. The model kitchen at the further end of the exhibit was easily one of the attractions of the whole exhibition for the up-to-date housewife.

Canadian National Exhibition—Exhibit of Clare Bros. & Company.



Peninsular Ranges.

Clare Bros. & Company, manufacturers of the Peninsular stoves and ranges, had an exhibit that was creditable to the firm and attractive to all who passed that way. Their wares need no heralding as they are known throughout Canada for their merit and pleasing appearance. Removable nickeling is a feature with all their stoves, which meets with the approval of every housewife when cleaning up is due.

The Peerless Range with its trip oven doors, its sectional key plate top which prevents breaks and warping, has been wonderfully successful with the trade, giving, as it does, talking points that have real merit when the salesman is demonstrating the range to a prospective customer.

Their new steel range, the Royal, has for its especial claim the straight fire box, that has proven such innovation in range manufacture. With the Royal the change from coal to wood is almost instantaneous. No mechanic is needed to make the change—anyone can do it. The dimensions of the wood fire box are sufficient to take in the longest fire wood when necessary, while at the same time short sticks, blocks, odds and ends are burned equally as well and as economically. The oven door of the Royal is especially attractive with its graceful convexity. It is a relief from the flat appearance that so many oven doors show, and gives a graceful harmony to the whole architecture of the range.

In heating stoves, the Elegant Base Burners stand second to none. Their lines are perfect, and their utility satisfying. On the floor of a dealer's store one can easily imagine them attracting attention. They have all the necessary drafts and dampers and can be regulated to give any desired heat or to be merely kept "alive," scarcely consuming any coal. The ash pan catches everything that falls from the fire box, and when removed for emptying, drags no dust or ashes out on the floor. These are all features which must commend themselves to every dealer who would sell a stove he can thoroughly recommend, and which he knows will build up his own reputation as well as that of the manufacturer.

Canadian National Exhibition—Exhibit of Clare Bros. & Company.

Clare Bros.' two exhibits were situated near the entrance of the stove building, and thousands of people passed it daily.

The Canada Stove Exhibit.

For the first time they made an exhibit at the fair the Canada Stove Works certainly did themselves credit, as can be seen from the cut. A feature of the exhibit was the arrangement. Each stove and range could be taken at a glance and their full elegance of style appreciated. From the dealer's viewpoint the Royal stoves and ranges are especially appealing, as their appearance justifies the company's claim of their being an easy line to sell. The background of the exhibit was arranged with bunting, alternating as to colors, and had a simple, chaste effect—just enough, and not overdone. John E. Cave was in charge of the display and made for the Royals many new friends.

All the space the company could procure was 15 x 14 feet, very little space for a very big line. In the foreground they placed the "Royal Champion," a four-hole wood or coal stove with 20 x 20 inch oven, reservoir, pouch feed, duplex grate, and wood and coal linings. The semi-plain design and the beautiful smooth castings were objects of much comment. The remarks passed about the "Royal Champion" proved beyond doubt that it is the best appearing and best proportioned wood and coal stove on the market.

The "Royal Empress" stood to the right of the "Champion" and made an indelible impression for a good, cheap, six-hole range, with reservoir, high shelf, wood and coal linings, 20 inch oven, duplex grate and excellent working qualities. The retail price being about $38, puts it within the reach of all. The dealer that is looking for new customers will consult his own interests by inspecting the "Royal Empress."

The "Royal Corona" range, six-hole, with reservoir and warming closet, held the place of honor. To say the least the manufacturers of this range are proud of it and so are they who buy it.

There is just enough nickel about it to give it a lasting impression. The removal of the grates is simplicity itself. The linings, which are heavy and of iron, can easily be seen through the large pouch feed, without removing a cover. The oven is large and well ventilated. The "Royal Corona" was not gotten up especially for the Exhibition, but simply taken out of the storehouse and shipped to Toronto. If any dealer buys a Corona and finds it is not first-class like those he saw at the Fair it costs him nothing.

The "Royal Escort" was next in the range line, with large swing feed door and tea shelf. The Escort is a cheap six-hole range with the latest American improved duplex grate. It has a 20 inch oven and is very easily changed from wood to coal, as there are no bolts about the fire box. The change can be made in one minute with a screwdriver, with no necessity to use warm language. The price is just right for the dealer who is looking for profits.

Then came the "Royal Corona," four holes and high shelf, a beautiful city range, and it was certainly encouraging to hear the compliments paid it by city folks.

To say that the No. 12 and No. 14 "Gem Oaks" sold like hot cakes is putting it easy. The neat mica door and beautiful design seemed to capture the ladies, two and three at a time. More than one lady was heard to say "that is the prettiest little stove in the building."

RETURNED SEP 10 1906

Canadian National Exhibition—Exhibit of the Canada Stove Works.

The company's offices and foundry are at Harriston, Ont., where they can be written to for catalogues or agencies.

The Canada Stove Works are a company who believe in keeping up to date in regard to the newest regulating and labor-saving devices that are brought out from time to time. They have many of these new features which they have originated themselves, in addition to which they have all that is practical and that has been demonstrated to be good and serviceable in the stove world. The company's foundry and offices are in the Town of Harriston, Ont. Their staff consists of men who have had years of experience in stove and range work, to which must be largely attributed the success they have met with during their career.

Diamond Enamelware.

The Kemp Mfg. Co., Toronto, occupied a conspicuous corner in the centre of the new Process Building, the booth being permanently constructed of white painted wood, neatly decorated in white and yellow and having a ceiling of white canvas.

On the pedestal of shelving an elaborate display of their celebrated "Diamond" ware was shown. This line was introduced only recently, but has already won immense popularity as a high grade enameledware, every piece being fully guaranteed to wear even better than the imported lines made in Austria and Germany, while being only one-third the price.

Diamondware possesses many features not found in other lines, whether domestic or imported. The handsome and useful enameled covers to be found on the steam pots and sauce pans are not produced by any competitors and the nice light weight, round handles used on the sauce pans and other handled goods do not cut the hands as the flat handles on other lines do when the vessels are full. The paneling in the centre of the bottom of the pots and pans also prevents the burning of foods being cooked. Still another valuable feature is the secret formula used in the enameling preparation, as a result of which "Diamond" ware is practically unstainable, a quality not enjoyed by other lines.

The guarantee given by the Kemp Mfg. Co. on "Diamond" ware covers wide ground and dealers who have been selling imported lines should send for one of the elaborate catalogues recently issued by the company and secure the agency for "Diamond" ware in their district. The line is superior in every way and will stand investigation.

Other lines manufactured by the company are onyxware, pearlware, garnetware and whiteware, all of which lines are favorably known to the hardware and stove trades throughout the country.

A few of the articles manufactured by the company are cold blast lanterns, coal hods and shovels, ice water tanks, bread boxes, cake closets, metal safes, tin and enameled kettles, enameled dishpans, preserving kettles, sauce pans, bowls cups and saucers, strainers, roast pans, kneading pans, rice boilers, stove pots, cereal cookers, tea steepers and kettles, coffee pots, pudding and bread pans, butter dishes, sugar bowls, stove stands, flour bins, dairy cans, oil cans, stove pipe elbows and snow shovels.

These, of course, are only a few of the articles manufactured in the immense modern plant which has been erected as a result of the enterprise of the principals of the company, a look through their recently issued catalogue being necessary in order to get a fair idea of the wonderful variety of shapes and articles produced in the enameling section of the works. Other sections are devoted to manufacturing galvanized, tin, japanned, steel and copper ware, while a large trade is also done in metals of all kinds, stocks being kept at Toronto, Montreal and Winnipeg.

The display was a centre where hardware and stove dealers gathered, located as it was close to the displays of the leading stove manufacturers. This was the first time the Kemp Co. made a display at the Exhibition, and next year they will probably have even a more interesting exhibit.

Canadian National Exhibition—Kemp Manufacturing Company's Exhibit.

Canadian National Exhibition—Moffat Stove Company's Exhibit.

The Moffat Stove Co.

The Moffat Stove Co's display as will be seen from the illustrations, was one that would be hard to beat, considered from all standpoints. It was situated in the stove building in a position where it could be commanded by a view from both aisles leading up to it. Approaching the display during the evening one was particularly struck with the glittering reflection of the electric lights upon the nickel ornamentation.

Besides their factory at Weston, Ont., the Moffat Stove Co. have branches in Winnipeg and Calgary, and are the largest exclusive makers of stoves in Canada.

Their "Canada National" range, made in three sizes is their greatest favorite, particularly in the west where large numbers of this range are used. These ranges are lined throughout with heavy millboard asbestos, which is held in place by cast iron gratings. This prevents the absorption of dampness or sweat as happens in ranges where the asbestos is tightly enclosed between two sheets of steel. The fire pot for coal is straight and clean. No clinkers rest in its corners as the Moffat improved duplex grates entirely eliminate this feature. These ranges can be had with a special grate for burning wood 28 inches long. A sliding grate regulates the air and lets the ashes drop into the big ash pan. They recommend the tank on the left end of these ranges as the best way for heating water. Being placed in that position the water tank utilizes the surplus heat thrown off from that side of the fire box, therefore there is no noise made, but the water is kept at the boiling point always. The tank, which is of planished copper, holds nine Imperial gallons, and can be detached when the customer wishes a square range.

All National ranges are supplied with cast iron flue backs, guaranteed for 20 years. Steel or sheet iron flue backs rust out in a few years on account of the creosote, and condensation of smoke from the stove pipe and chimney.

This firm also manufactures a complete line of heaters, including the "King" base burner, "Royal Opal" base burner and the "National Oak" heater, which burns any kind of fuel. It can also be supplied with self-feeding attachments and has duplex grates and shaking ring. The Alberta heater for hard and soft coal, is another of the exclusive patterns made and patented only by this company. It is made in four sizes, single and double heater.

The "Fairy Oak" is a cheaper class made in five sizes. This heater has had some new improvements over last year's pattern, which include larger feed door and higher body. No. 17 size is made with a steel baking oven, the construction of which has just been patented.

Attention must also be drawn to Moffat's new cheap steel range called the "Nelson," which is all made of heavy stamped steel with the exception of the top plates and grates. This is a new departure in the steel range line and will be hailed with satisfaction by the hardware trade generally.

Huron Stoves and Ranges.

A very fine exhibit in the stove building this year is that of The Western Foundry Co., of Wingham, and it attracted a great deal of attention from the stove and hardware dealers visiting the Exhibition.

As will be seen by the accompanying illustration the exhibit of Huron stoves and ranges was very nicely arranged and reflected great credit on the staff who did the work. The exhibit easily held the premier position in the Stove Building, it being right at the main entrance where it could be seen by everybody entering the building, and in fact the big sign, "Huron Stoves and Ranges," was the first thing that caught the eye.

Three of the staff, along with Mr. Frank Taylor, the manager, were kept busy all the time greeting old friends of the company and explaining the especially useful in low cellars. It is easily mounted, and, in short, is powerful, economical and superior. The Huron enjoys a rapidly growing patronage.

The Huron Steel Range for hard or soft coal or wood is a range of unquestioned superiority, beautiful in design, elaborate in ornamentation and perfect in construction. In addition to these points the manufacturers claim for it that it contains many features of merit that are new and desirable.

The "Crown Huron," a very neat and artistic stove, is especially designed to fill the demand for an up-to-date medium sized cooker with all the desired modern appliances. It is very moderate in price, and just suitable for such households where the larger and more expensive ranges are not needed. It has plenty of nickel ornamentation, and a full set of nickel bands, nickeled oven panel and shelf and nickeled pot shelves, etc., and therefore has sheet flue range on a considerably less amount of fuel.

One of the new lines shown this year was the "Oakdale Huron" made in four sizes, for hard or soft coal, or wood. It is nicely finished with nickel trimmings, and was the object of much admiration from the dealers present.

In addition to these lines the Western Foundry Company manufactures the "Art Huron" base burner, a stove of which it is justly proud, and other lines such as hotel steel ranges. The Western Foundry Co. will be glad to hear from any hardware merchant interested. All information will be sent on application.

Huron County is the second county in wealth and commerce in Ontario, and many good things have come out of it. It seems fitting, therefore, that the Huron stoves and ranges, made by the Western Foundry Company, should have so solidly secured for themselves the

Canadian National Exhibition—Exhibit of the Western Foundry Company.

good points of their different makes, besides handing neat and attractive literature to those interested.

Their steel plate hotel ranges which stood in the background, attracted considerable attention. Many hotelmen examined this range and were greatly pleased with it, as a result many handsome orders were booked.

Particular attention was paid to The Huron Red Hot Furnace for hard coal, soft coal, wood or coke. It is a coal furnace, but, having a very large feed door, is convenient for wood burning. A general utility furnace, one, at least, that gives perfect satisfaction, is a rarity, but the Huron furnace fills this exacting bill in every particular. The Huron is built low and is, therefore, especially useful in low cellars. It is easily mounted, and, in short, is powerful, economical and superior. The Huron enjoys a rapidly growing patronage.

The Huron Steel Range for hard or soft coal or wood is a range of unquestioned superiority, beautiful in design, elaborate in ornamentation and perfect in construction. In addition to these points the manufacturers claim for it that it contains many features of merit that are new and desirable.

The "Crown Huron," a very neat and artistic stove, is especially designed to fill the demand for an up-to-date medium sized cooker with all the desired modern appliances. It is very moderate in price, and just suitable for such households where the larger and more expensive ranges are not needed. It has plenty of nickel ornamentation, and a full set of nickel bands, nickeled oven panel and shelf and nickeled pot shelves, etc., and therefore has the appearance of a much more costly range.

The manufacturers claim that the ordinary sheet flue does not heat the oven bottom evenly, this being the reason why ranges do not bake uniformly. The shortness of the fire travel is also said to connsume a great quantity of fuel. In the two flue used in the "Crown Huron" the heat is evenly distributed, consequently the oven will always bake the same on every part, and owing to the fact that the heat travels completely around the oven twice before passing out of the smoke collar, the heat units generated in the fire box are consumed before being lost by passing up the chimney, with the result that it is possible to do the same amount of work as in a sheet flue range on a considerably less amount of fuel.

One of the new lines shown this year was the "Oakdale Huron" made in four sizes, for hard or soft coal, or wood. It is nicely finished with nickel trimmings, and was the object of much admiration from the dealers present.

In addition to these lines the Western Foundry Company manufactures the "Art Huron" base burner, a stove of which it is justly proud, and other lines such as hotel steel ranges. The Western Foundry Co. will be glad to hear from any hardware merchant interested. All information will be sent on application.

Huron County is the second county in wealth and commerce in Ontario, and many good things have come out of it. It seems fitting, therefore, that the Huron stoves and ranges, made by the Western Foundry Company, should have so solidly secured for themselves the position they now occupy in the trade and the home circles of Canada. The recommendation of the user of a stove is the best recommendation that a manufacturer or a dealer can have, and it is just such good words that have helped make the Huron stoves and ranges what they are.

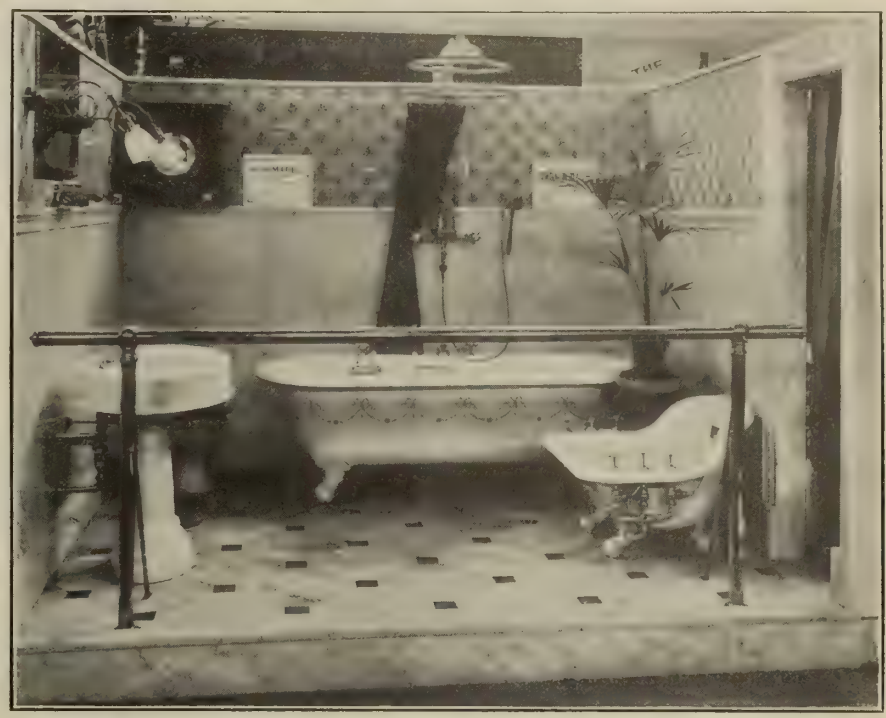
The Western Foundry Company have developed a large business throughout Manitoba and the new provinces, which has kept the factory running to its utmost capacity for many months. New men have been brought in from outside points to get the orders out; in fact, their staff is constantly adding skilled craftsmen, in their endeavor to keep up with business, and to get the latest ideas and improvements in the stove world.

The James Robertson Co.

Entering the main entrance of the Process Building the first thing that catches the eye is the brilliantly polished brass railing of The Jas. Robertson Co. exhibit, and just inside that their celebrated Naturo Closet that is receiving so much attention among the trade in Canada. This is the closet that is recommended by doctors as the only one that makes hygienic perfection possible. A large card on the closet reads : "See the slant on the Naturo Closet."

Another feature of the exhibit that is receiving indisputable attention among the visitors to the Fair is the solid marble bathroom fitted with a Premier enamelled bath, Pedestal lavatory, Sitz bath, and a Naturo closet, fitted with Kenny flushometer.

The walls and floor of this bathroom are of solid marble, the marble being manufactured by the company. A shower bath is also set up along with the fine nickel fittings on the Premier enameled bath, which makes as perfect a bathroom as one could wish for.



Many hardwaremen and plumbers paid a visit to this exhibit during the exhibition and expressed their delight in the quality of goods shown, and highly complimented the company on their very artistic and attractive exhibit which was easily one of the best on the grounds.

There is as much variance in the equipment of a bathroom as there is to any other room in a home, although ordinarily that part of a home shows little individuality and can hardly be distinguished from the same room in a hundred different houses. For the man, though, who wishes something different in the arrangements and furnishings of his bath, the James Robertson Company's exhibit offered suggestions which to many were entirely novel, and not at all beyond the reach of the ordinary man's purse. Unfortunately any exhibit is necessarily crowded for space in which to show many styles, but enough was shown to give an idea of what can be seen at any time at their Toronto warerooms.

The handsome marble back lavatories, with plate glass mirrors, are receiving special attention, particularly among the ladies, as are also their well known baths, viz.: "Yale," "Occident" and "Gladstone." Another feature that attracts the ladies' eye is the enameled iron kitchen sink, with drain board and rubber mat, which makes an ideal sink.

A noticeable feature of this exhibit is the high-class goods shown. The bathroom fittings are excellent. The electric lights and palms also add a brilliant finish to this display.

They are also showing lead and block tin pipe, solder and babbit metals, type metals and shot. Along with the display of metals is a sample of wiped joints artistically arranged and made by Arthur Spratt, of Campbell Cross, Ont. Altogether this exhibit is easily one of the finest on the grounds, and one that certainly does credit to The Jas. Robertson Co.

Canadian National Exhibition—Exhibit of James Robertson Company.

Canadian National Exhibition—Exhibit of James Robertson Company.

Metal Ceilings and Sidewalls.

Several particularly interesting lines for hardware dealers were shown in the exhibit of the Metal Shingle & Siding Co., Preston, Ont., who are well known for their artistic and durable metal goods for fireproofing buildings, which are fully described in their Catalogue No. 15. It is a well known fact that metal roofs are a protection against both lightning and sparks from engines, etc., allowing lower insurance rates and being, besides, water proof and cleanly. When galvanized, fifty years is considered the average life of metal shingles. Metal sidings, windows and door trimmings can be used to advantage on cheap and medium priced buildings, mills and factories and in rebuilding old structures, while metal cornices are in general use on all classes of buildings, however, was the display of Myers hay tools, litter carriers and stanchions for holding cattle. The stanchions are cheap to install and save labor and feed, consequently increasing the farmer's profits. Water bowls are attached to the stanchion fixtures. Several Goschen water tanks for cisterns, storage or stock watering. Boss water purifiers and pumps, hog troughs, etc., were also shown, together with a section of herringbone expanded steel lath for use in place of the old time wooden lathing. These lines naturally sell along with metal siding and shingles and the dealer who acts as agent for the latter generally finds it of advantage to sell some of the other lines from stock or from Catalogue No. 16, a comprehensive booklet which illustrates and describes the different articles referred to.

Canadian National Exhibition—Metal Shingle & Siding Company's Exhibit.

both in the city and in the rural districts. In these lines and in embossed metal coverings for ceilings and walls for schools, churches, stores, etc., many hardware merchants have developed a large trade and found it a very profitable side line to carry. The safe-lock principle of this company's shingles, interlocking on all four sides as they do, make them unequalled on the market.

The exhibit in the new Process Building was covered over with corrugated roofing and safe-lock shingles, while samples of different styles of ceiling, centrepiece designs, side walls, cove cornices, etc., were displayed on the wall in the background. Metal imitations of dressed and rock face stone and brick were also shown.

An important feature of the exhibit,

The modern farmer is availing himself of every labor-saving device in these days when help is so scarce. Consequently, the sale of litter carriers, cow stanchions and stock watering devices are growing more easy every day. The patent steel U bar stanchions are much better for tying cattle than chains or ropes, allowing perfect liberty of action and doing away with the necessity of filth-collecting stall partitions. Used in connection with galvanized water bowls, supplied with water from a tank connected with a regulating float valve, and backed up with a litter carrier for bringing the feed from the outside, the labor of feeding cattle is reduced to a minimum.

The Beath litter carrier, sold by the Metal Shingle & Siding Co., is worthy of special mention, it being sold under a positive guarantee that it is far superior to any competitor for the following reasons: First, it is the only carrier having a perfect swivelling track wheel enabling the carrier to round any curve without friction, and which cannot possibly leave the track; second, it is the only carrier constructed with a changeable gear and extension crank for lifting load from floor when box is filled, which in a moment can be adjusted for the use of a ten-year-old boy or a strong man; third, it is the only carrier fitted with loose handle without springs, and brake for lowering the box to be filled. The descent of the box is controlled entirely by the brake, the handle remaining stationary; fourth, it is the only carrier with unbreakable malleable frame and rust proof galvanized box; fifth, it is the only carrier which can be kept clean when in operation. The handle and gearing are separate from the box and the dumping arrangement fitted to the ends of the tub, where they will not be covered with manure and clog and freeze, which is frequently the case with other carriers. This feature of cleanliness is very much appreciated by operators; sixth, it is the only carrier running over track and switches of simple construction, which will not get out of order, are easily erected and will not cover with ice and snow out of doors and interfere with operations; seventh, it is the only carrier with track wheels protected so they cannot get broken; eighth, it is the only carrier having track wheels fitted with case hardened roller bearings.

Standard Silver's Splendid Show.

The beautiful reception room erected by the Standard Silver Co., Toronto, in the centre of the Manufacturers' Building was found by visitors to be a very convenient meeting place, many hardware customers of the company examining the articles on exhibit closely to gather ideas for their trade during the coming holiday season.

One of the display windows was given over largely to competition cups and trophies for sporting events, the centrepiece being the magnificent trophy offered for the Toronto-Hamilton relay race, manufactured by the Standard Co. In the other window were samples of flat and hollow ware taken from the regular line produced in the Standard works. These won much praise from customers who were looking for the newest things for the Christmas trade. Two interesting articles shown in the window were the smallest engine in the world and the smallest watch in the world, the latter being about the circumference of a ten-cent piece.

In the reception room a beautiful silver cabinet, worth about $400, was shown, it containing a tea set, waiter and a dozen of everything in flatware including all the fancy pieces.

To aid in the sale of Standard silverware the company supplies illustrated booklets containing the customer's name and also a copy of the comprehensive guarantee under which all the Standard products are sold These are very helpful in developing holiday trade by distributing them among probable customers before the buying season arrives. Dealers can secure copies and additional information on request.

Canadian National Exhibition—Standard Silver Company's Exhibit.

Success Manure Spreaders.

What was probably the best farm implement display in the implement section of the Process Building was that of ensilage cutters, plows and manure spreaders made by the Paris Plow Company, Paris, Ont. The "Success" manure spreader, which was one of the chief features of the exhibit, has had a large sale amongst hardware dealers, who sell special lines to farmers, the company making a specialty of pushing it through the hardware trade.

A few reasons why the "Success" has the largest sale are as follows: Lightest draft—direct chain drive makes draft 25 per cent. less. Drive chain is very heavy steel pinned and not a link has ever broken. Beater freeing device insures easy and safe start and dispenses with the cumbersome end board. Rear axle is larger than all others and one-third stronger. Gear and sprocket keyed on axle at either end and machine drives from both ends. Adjustable spring rake makes manure fine or coarse as desired.

Canadian National Exhibition—The Paris Plow Company's Exhibit.

Economy Furnaces and Heaters.

The exhibit of the Pease Foundry Company was undoubtedly the largest and most comprehensive furnace display in the building. It creditably reflected the spirit of that enterprising firm. The effective arrangement of their warm air furnaces and hot water and steam boilers elicited the most favorable comment.

In the foreground, the Economy Hot Water and Steam Boilers were cleverly displayed, being arranged in sizes, from the small yet effective Junior Boiler, capable of thoroughly warming and ventilating schools, churches and other large buildings.

Economy boiler nipple connection is different from all others.

Economy Heaters are made in twelve sizes for use in residences, and ranges from 275 to 2,700 feet of hot water radiation. It has many special features contained in no other boiler on the market. Its oscillating grate actually sifts its own ashes, while the grate can easily be turned on edge to have the fire-pot cleaned. Another important point is that the top surface of the grate can be got at with a poker. The fire-pot is unusually fitted with corrugated sides and dome. This construction gives double the direct fire surface of that of any

burning wood, hard or soft coal, a feature of the latter being that no gases can gather around the doors.

The "Economy" with its many splendid features and the "Victor," a small priced, yet high-class furnace, capable of holding its own with the ordinary furnace on the market, were the source of much praise-worthy comment from interested parties.

At one end their fine Wood Furnace was shown. A tasty arrangement of radiators by its side put the finishing touches to a splendid exhibit. The business transacted during the fortnight of the Fair exceeded the firm's most san-

Canadian National Exhibition—Exhibit of the Pease Foundry Company.

The Pease Economy Boiler received much attention, and visitors seemed delighted with it. It is the boiler that will always stay tight (having no rubber gasket joints) and will circulate freely while the old-fashioned kind is getting ready. It is also claimed for this boiler that it will run forty-eight hours without any attention, and will burn all the coal and leave not an ash to sift.

The Economy boiler was the first on the market with nipple-connected sections. Of course there is a difference in nipples and nipple connections and the previous one. Another feature is the centre nipple connection which permits a free flow of water through the heater without passing over surface exposed to air. There are also many other important details in the "Economy" which are worthy of consideration.

In the background their peerless line of warm air furnaces was shown to good advantage.

Two furnaces which attracted considerable attention were the "Economy" combination for both hot water and steam, and the new style of "Economy"

guine expectations, reflecting the enormous strides the business has taken in the past few years.

The radiators shown by the Pease Company were real ornaments, the ornamentation and bronzing being especially good. Those representing the company were kept busy throughout the fair meeting the company's customers, and forming new friends among dealers from distant parts, with many of whom a connection was established when the merits of the Economy furnaces were made known.

James Morrison Brass Display.

Probably the most beautiful display in the entire exhibition was that of the James Morrison Brass Mfg. Co., Toronto. This company have long been recognized as the great brass goods house of Canada; but of late years they have made great strides in the manufacture of artistic gas and electric fixtures so that their display included many fixtures which for beauty in design and workmanship compare to advantage with the finest imported lines. This is also true of their altar rails and brass lecterns.

A feature of this exhibit was their comprehensive display of locomotive, engineers, steamfitters, and plumbers' brass good, while their exhibit of ship chandlery was of much interest to many. Two of the important lines with this firm were their Hancock inspirators and their J.M.T. locomotive injectors.

The trade present were very much interested in their display of enamelware and plumber supplies. The lavatories receiving special attention, as also did their enameled baths with nickel plated fittings and porcelain handles.

A close examination of the exhibit shows that the company continues to manufacture practically everything in brass and what it makes, it makes well.

Canadian National Exhibition—Exhibit of the James Morrison Brass Mfg. Company.

The "Souvenir" Line.

The Gurney-Tilden Company deserve credit for the taste displayed in the fixtures surrounding their exhibit. A massive facade with heavy timber columns and wide cornices gave the whole an appearance of solidity and permanence, which with its soft, brown, weathered finish, was one of the show-places of the stove building.

The structure was built with a view to being permanently occupied by the company at future exhibitions. The idea of having the same stand for a number of years is a good one, as people associate the place of meeting a firm with the exhibit itself. Gurney-Tilden Company's stand being on a corner was easily seen from a good distance away, and was made the objective point upon entering the building by large numbers of dealers and others interested in stoves and ranges.

From year to year there is some slight improvement made in all stoves, and the Gurney-Tilden people seem to have them all if there be any merit in them, until now each stove and range is as nearly automatic as possible, and so simple and easy of management that a a woman does not need to "serve an apprenticeship" in order to get results.

The Souvenir is the only range in Canada having a thoroughly aerated oven. The air being constantly changed in the oven produces wholesome cooked food with less fuel than with the old style air-tight or supposed ventilated oven. This feature is carried through the entire Souvenir line.

The Souvenir range line comprises a full line of cast iron ranges known to the trade as the Domestic and Champion Souvenir ranges, and in the steel line as the Royal Souvenir Steel Range. All these lines are fitted with the celebrated aerated oven and grates which are drawn out without removing a bolt, interlocked lined centres and patent rolling dampers.

The Souvenir base burner is a marvel in stove construction, besides being an extremely handsome heater in appearance. It has many practical points which puts it far in advance of anything in its class, such as draw out fire pots, feed cylinders and grates, all these parts being removable without the aid of a mechanic or having to chisel out bolts.

They also had a complete line of New Idea furnaces, in all styles capable of warming almost any class of building. A few of the points which place this line of furnaces in the front rank are fire pots being cast in one piece with heavy wings or flanges cast along the sides, giving the fire pot the radiating power of two ordinary ones and making it almost indestructable. They are also fitted with the celebrated New Idea draw-out grates. The heating surfaces are large and the furnace being low down can be used in almost any cellar. It also has the only grate on a warm air furnace in Canada that will take the ashes away from the fire pot without disturbing the centre.

Unfortunately through an oversight on the part of the engravers, the cut for this fine exhibit was not made in time for this week's issue.

Canadian National Exhibition—Exhibit of the James Morrison Brass Mfg. Company.

E. W. Gillett Co.

There was no dearth of artistic exhibits in the Manufacturers' Building, and a booth which comes under that heading alone failed in the purpose for which it was intended. More preferable would be a display designed entirely from a practical standpoint, and devoid of all features pleasing to the eye of the general public. It would at least have a certain distinction that would catch the attention of interested parties. The aspiration of every exhibitor who has studied the matter is to combine these artistic and concrete qualities. E. W. Gillett Company have come very near to attaining the point of perfection in this respect, with the result that their showing ranks high among the best in the building.

The accompanying illustration gives a much clearer idea of the arrangement than could possibly be written. There is no superfluous decoration—everything is an advertisement for Gillett's Lye, Magic Baking Powder, etc, made doubly effective by being well displayed, and the booth brilliantly illuminated.

A point strongly emphasized is the substitution of a red for a blue label on Magic Baking Powder. This is an important change, and the fact that it is being made is impressed upon visitors to the exhibition in many ways. The alternate rows of red and blue packages will be noticed on every hand in the booth. A large card bearing the words "Notice the change of label" calls attention to the dusky magician who presides at a table in the centre of the floor and has proved a big drawing card. He lifts a silk cap and exhibits a package of Magic Baking Powder bearing a blue label. The cap is lowered again, the magician waves his wand, and, presto! when he again removes the cap the red package appears. For a while, until the public become familiar with the change, Magic Baking Powder will be sent out in red-labelled cans, with a blue label wrapped around it, with a notification that the goods will hereafter be known by the red label.

The following is a complete list of E. W. Gillett Company's lines: Gillett's Perfumed Lye, Gillett's Washing Crystal, Gillett's Cream Tartar, Gillett's Caustic Soda, Royal Yeast Cakes, Magic Baking Soda, Magic Baking Powder, Imperial Baking Powder and Cream Yeast Cakes.

The Gillett factory building has a frontage of 80 feet by a depth of 300 feet, facing on three streets. On the fifth floor is located the baking powder room, with its large revolving mixer, taking a ton of material at a time, and also the paper box department, where in the neighborhood of 100,000 complete packages are turned out daily. On the fourth floor is the machinery for making Royal Yeast, including the machines, which each turn out 1,460 yeast cakes every minute. Drying rooms, with a capacity of over 15,000,000 yeast cakes, also take up part of the fourth floor. It has been calculated that at the lowest estimate possible each batch of yeast which the company turn out will make 2,600,000 loaves of bread, and from four to six batches are turned out per week the year round. A striking feature is the fine arrangement of every detail looking toward the careful and expeditious preparation of the goods.

Canadian National Exhibition—Exhibit of E. W. Gillett Co., Toronto.

For the Handling of Oil.

Standing out prominently in the list of those exhibits which in themselves were alone worth coming hundreds of miles to see, is the oil and gasoline storage system made by S. F. Bowser & Co., Inc., 530 Front street west, Toronto.

The growth of this firm has been remarkable. Established in 1885, they offer a tried and proved success. The merchant, manufacturer, automobilist, railroad official—in fact, any handler or user of all kinds of oils, benzine, gasoline or solution in large or small quantities, were quick to recognize and take advantage of the safe, economical, clean and profit-insuring method which the Bowser system alone affords. In these days of keen competition every device which reduces cost or fire risk, or conserves time, labor and material, is just so much gain and advantage in the battle for supremacy. So broadly adaptable are the Bowser equipments, so complete in detail and so simple and comprehensive in construction that they meet all conditions required. No money or care have been spared in making these outfits the very best that can be produced.

The demand for Bowser four-measure self-measuring outfits of a few gallons to thousands of gallons capacity has increased so rapidly and to such an extent that larger manufacturing facilities have become necessary and a large new two-storey building, 60x180 feet, is being erected at 66-68 Fraser avenue, two squares west of the King street subway, to be ready for occupancy by October 15.

Hardware and Metal spent an interesting and instructive hour at Bowser & Co.'s display in the Process Building and gained much information from the members of the Canadian organization who were in constant attendance upon the thousands of interested callers. He met the manager, W. R. Hance, and the following salesmen, all of whom are well and favorably known in their respective territories: J. B. Bate, A. E. Moffatt, J. E. Hale, Levi Swartz, C. S. Hetrick, and S. W. Paisley, of Ontario. The representatives who were not present are: Thos. Cragg, of Manitoba and the western provinces, Napoleon Rosconi, of Quebec, and Wm. Robertson and J. H. W. Strubbe, of the Maritime Provinces.

In the handling of coal oil, gasoline, varnishes, glycerine, castor oil, lubricating an dpaints oils, etc., in grocery, drug, general and hardware stores, the liquid is discharged by gallons, half gallons, quarts or pints directly into the customer's can from the tank located on the first floor, or in the cellar, or buried outside in the ground. In garages, public and private the gasoline may be brought directly into the reservoir of the machine ,and in shops, mills, factories, railroad roundhouses, etc., by adjustable measures, accurate quantities, according to size of oiler or other vessel to be filled, may be drawn in minimum time, at minimum labor and with maximum safety, in all cases keeping the gases in and dirt and grit out; preventing all loss by waste so common to the ordinary method through evaporation, overflow, over-measure, spilling, dripping, etc.

A view of the Bowser exhibit is shown below. Among late installations may be mentioned Marks, Clavet, Dobie, Port Arthur, Ont.; the Dominion Automobile Co., Montreal, Toronto, and Winnipeg; Singer Sewing Machine Co., St. John, Que.; Parke-Davis (Drug) Co., Walkerville, Ont., and London, Eng.; Canadian Furniture Co., Waterloo; Canadian Rubber Co., Montreal. Nearly one-third of a million outfits are in use throughout the world, Mr. Hance told the reporter, and the wonderful part of it all is that such heavy fluids as varnish, paint oils, lard oil and rubber cement, by means of specially designed combination suction and force pumps may be drawn any distance and to any height, and thus distributed for use as needed as readily and easily as the lightest fluids made. And better still by absolutely preventing every drop of waste of whatever kind and doing away with open, sloppy measures and oil-soaked floors, as many gallons are sold or used, as bought, and thus all the profits are secured.

In a word, these outfits pay for themselves over and over during their lifetime. Many in use fifteen to twenty years are still giving satisfactory service. They have the unqualified approval and endorsement of fire boards, underwriters and insurance companies. Indeed, Bowser outfits possess the peculiar quality and design that comes within the most rigid specifications.

Canadian National Exhibition—Exhibit of the S. F. Bowser Co.

Canadian National Exhibition—Exhibit of the Canada Metal Company.

Good Cheer Heating Goods.

The James Stewart Mfg. Co., Woodstock and Winnipeg, exhibited for the first time this year, their display in the Stove Building, while small, being very attractively arranged, gaily colored bunting being artistically attached to the supports, the booth being made to resemble a home-like tent by the addition of a roof of red, white and blue canvas. A few flags helped to add color to the arrangement. The important feature, however, was the Good Cheer line of stoves, ranges and furnaces.

The "Garnet Good Cheer" attracted a great deal of attention. It is semi-plain yet very handsome, with wide removable nickel bands and smooth castings. Its commodious square oven, large fire-place for coal or wood, with pouch feed and cast linings, grates removable without disturbing linings or waterfront, and neat steel closet, are all features which will help to make the "Garnet Good Cheer" one of the best sellers on the market this year. It has just enough ornamentation to give it the most artistic appearance of any range on the market.

The "Kitchen Queen" range and "Uneeda Good Cheer" steel range, the latter made with a hearth and a front door, four and six holes, also won admiration and sustained the good reputation they have already won.

The "Good Cheer" art base burner is now made in two sizes, Nos. 44 and 55. The latter is the latest, its surface plating being very beautiful and easily cleaned, and the rails are particularly neat. The fire-pot is 14 inches in diameter and is removable through the side door opening without the use of a screwdriver. The "Good Cheer Art" is supplied with the latest style of duplex shaking and dumping grate. A large ash pan is provided, and every stove is a double heater.

The Canada Metal Co.

The Canada Metal Co., Toronto, manufacturers of babbit metal and lead pipe, made an extensive display of lead traps and bends. This is now one of their leading lines. They are prepared to supply the trade with any size or shape in traps and bends required.

The exhibit also takes in the various sizes of lead pipe made by the company, who carry a very large range of pipe, same being from 1-16 of an inch to 8 inches in diameter. Their Imperial genuine babbit metal is creating a great deal of interest. This is the highest grade babbit metal made. It is in use on large steam engines, dynamos and high-duty machinery. This metal the company guarantees to give satisfaction. They are also showing in connection with this babbit, other alloys that are giving satisfaction wherever placed.

There are also to be seen plumbers' wiping solder, all grades and shapes; bar lead, block lead, bar tin, battery zinc, fuse wire and all newspaper metals, pig lead and ingot copper.

The general manager, Mr. W. G. Harris, has tried to show the trade through their exhibit, most all goods manufactured by the company, and the exhibit, as can be seen by the illustration, is a very creditable one.

Canadian National Exhibition—Exhibit of James Stewart Manufacturing Company.

James Langmuir Colors Exhibit.

It was next to impossible for any one passing through the Transportation Building to fail to notice the exhibit of the now well known firm of James Langmuir & Co., Toronto. Located in the same place as last year—that is, in the eastern balcony—the brilliancy and tone of everything about their exhibit at once caught the eye and induced a closer investigation. "Paints for decorators," as a trade term adopted by this firm, appealed to the decorators and painters with considerable vigor. It is the "meant for me" idea that goes home to the heart, and not only were the firm's representatives kept more than busy in greeting old friends and customers, but new faces were constantly making an appearance and wearing that peculiar expression which seems to say, "I've heard of you often, and want to know you." The reason is obvious, for James Langmuir & Co. are offering to the painters and decorators of Canada a line of colors in oil and japan that are simply unexcelled for strength, richness of tone, purity, and fineness of grinding, and, as one decorator remarked, "Anyone using the Langmuir colors once will never again use any other. They are from three to seven times stronger in tinting power than anything I have ever used. I can get clean, pure tones with them, which I cannot always do with other makes, and their covering capacity exceeds anything in the market." There is the story. It is the clean, pure tone of the finished work that takes the eye, pleases the decorator, and holds the customer. No wonder, then, that one decorator tells another, and passes the word on to a third. The Langmuir colors are all that can be desired. Nor is verbal endorsement necessary, for the line of colors shown in their exhibit tells a story of its own, and holds the attention of every passer-by. The exhibit of colors includes all those rich, deep shades that are so dear to the heart of the maker of high grade coaches, as well as the rich striping and gear colors for all classes of wagons and carriages.

No handsomer contrast could have been produced than the one obtained by this firm in placing their color panels in a setting of pure white. This is their celebrated "Homolite" high gloss white enamel, which, even to the casual observer, contains elements which are seldom found in white enamels. It glistens, it has no yellowish or bluish cast, but is just white, and that is what one wants in a white enamel. The chair and table in this exhibit are finished in vermilion, and for this particular color James Langmuir & Co. have adopted the name of P. & D. Vermilion, the initials standing for "permanent and durable," because this brand of vermilion has the rare property of being both permanent and durable, and capable of resisting the action of light. One decorator said: "This vermilion of Langmuir's always makes me think of the rock of Gibraltar."

No visitor to Windsor Castle expects to receive a descriptive history of the King, for such a thing would be absurd. So, in the exhibit of James Langmuir & Co. it is equally absurd to go into a lengthy description of the Blackwell varnishes made by this firm. These varnishes have been so long and favorably known to the entire trade and to all who use varnish in any form that the exacting and fastidious finisher knows that he is unable to obtain as high a finish to his work with any other than the Blackwell varnish.

Nor must a word of praise be omitted for the display of shingle stains shown, the like of which has never before been seen. "If you do a thing at all, do it well" is a motto which might well be adopted by this firm, for it is emphasized in every line of goods they put on the market. Their shingle stains are no exception. Trial has proven them to be light and weather-proof. A glance shows them to be everything which could be desired in color and richness. Even alongside of the Homolite enamel, Blackwell varnishes and Langmuir colors, they stand forth as a prince among princes. Builders, architects and contractors are constantly stopping to admire the shingle stain samples, and the comment heard among the visitors was, "This is what we have been looking for."

James Langmuir & Co. deserve a large amount of praise for the high standard which they have established and which has placed them on the highest plane of high grade manufacturers. Expressions of congratulation were frequently heard as to the beauty of the entire exhibit, while each visitor took delight in praising the particular line in which he was interested, whether as a decorator, piano or furniture finisher, carriage maker, builder or architect. The office and works of the company are at 1340-1346 Bathurst street, Toronto.

"Perfect Idea" Ranges.

The Guelph Stove Co. has a very handsome exhibit showing their handsome lines of stoves, ranges, heaters and furnaces. Last year they introduced their "Perfect Idea," a range which has had an immense success as a highclass article. It is made in five different styles and two sizes, the principal feature being the large oven, deep fireplace with duplex grate, (which is removable without the expense and trouble of removing linings in order to replace with new one should an accident occur); nickle parts can be removed in a moment thus allowing the busy housewife to keep an elegantly polished stove without destroying the appearance; draft dampers on outside an entirely new feature in ranges; all bolts and nuts removed from contact with fire, thus giving the stove a longer life. A very ingenious gas attachment can be fitted to any "Perfect Idea" range, doing away with an extra gas stove. The company have the exclusive rights of this convenience.

The "Select Idea" is a range which has been recently introduced, being handsome in design, medium in price and possesses all the features of a first-class range. This range should be inspected by dealers. It is made in every style with 18 to 20 inch ovens.

The "Grand Idea" is a high-class base burner, beautiful in design, has removable nickel and large fire pot, which can be easily removed from front door. It takes the sold air from bottom of stove, thus giving a greater volume of heat for heating other rooms. They also show a beautiful line of oaks with duplex or cone grates, handsomely nickeled, with screw dampers, making it thoroughly air-tight. A line of "New Idea" hot blasts and "Quebec Idea" heaters were also shown in four sizes.

Canadian National Exhibition—Exhibit of Guelph Stove Co., Guelph.

Furnacemen should look into the good qualities of the Kelly furnace as it possesses features which will ensure them perfect satisfaction with their customers. It is simple, economical and durable and has direct draft damper, which gives full control of fire, and automatic gas damper, which completely prevents danger of explosion. It is dustproof, and has large oak double feed doors, which permits the use of large chunks of fuel. T. G. Watson, Western Ontario representative of the company, was in charge of the exhibit.

Aluminum Ware.

In the Manufacturers' Building the Canadian Aluminum Works, Chambly Canton, Quebec, had an exhibit which attracted considerable attention from hardware merchants, many of whom have carried stocks of the company's goods. The great variety of articles shown was a surprise to many as while the company makes a specialty of cooking utensils for hotels and private homes, the exhibit of sign letters, electric lighting fixtures and shades, trays, dishes, bathroom fixtures, hooks, etc.. was full and complete.

In addition to the well-known advantage of lightness in weight of aluminum goods an additional advantage is that in cooking utensils the metal is both tasteless and odorless.

Hardware dealers who have a trade in camping outfits and house furnishings can hardly afford to do without a stock of this most modern and serviceable line of goods and should, therefore, write the company at the address given above without delay.

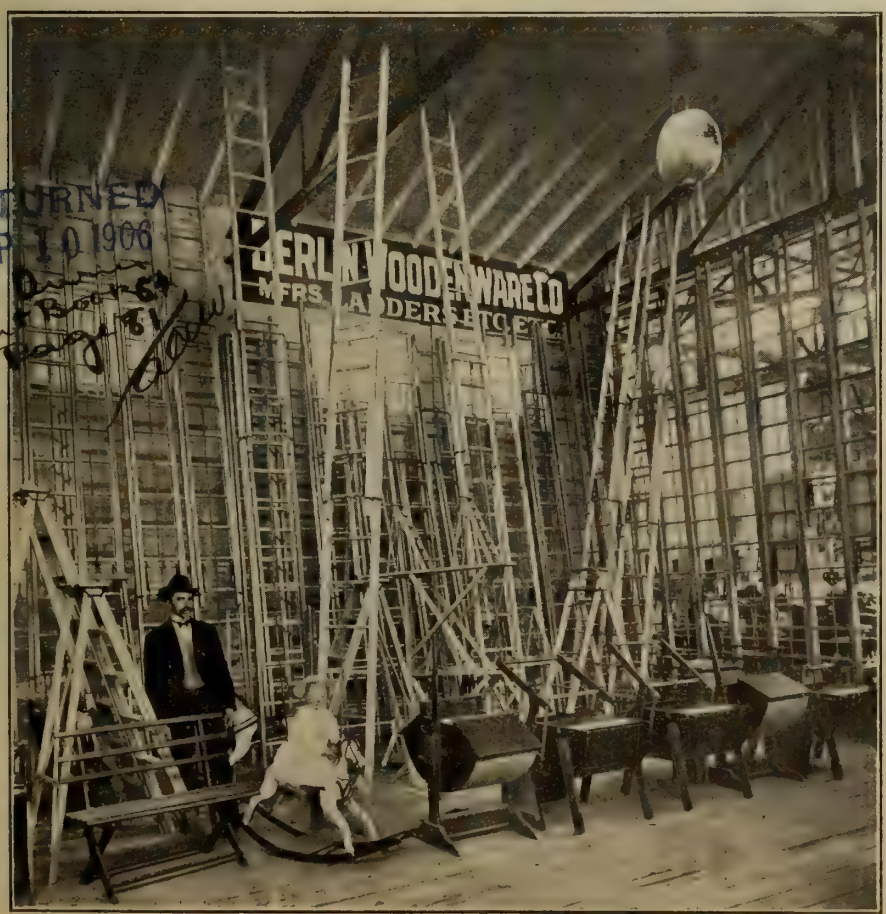
Canadian National Exhibition—Exhibit of Canadian Aluminum Co., Chambly, Que.



Majestic Polishes.

Among the exhibits at the Fair that brought a personal interest to all who saw it, that of the Majestic Polishes, Limited, Toronto, was up with the leaders. Polishing up metal and burnished surfaces ordinarily suggests the application of elbow grease, the contemplation of which often left the cleaning up until corrosion and time put the articles to be cleaned without the pole of such work.

Polishes have been brought out from time to time that eliminated to a great extent this hard labor, but which either ate into the metal or scratched the surface so that soon the brightness was altogether gone. It was to do away with these injurious elements and yet get a quick shinning polish that the Majestic brands were first made. In the liquid metal polish only the highest quality of refined oils are used, free from all acid and grit, and which can be used with perfect safety on the most delicate gold and silver. The Majestic bar polish is made for cleaning and polishing copper, brass, nickel, zinc, bar fixtures and household articles. A feature of this and all the Majestic polishes, is that not only is a lasting lustre obtained, but all stains and oxide are removed, and the metal left less susceptible to atmospheric conditions. The company's paste metal polishes are made in three colors—white, red and black—of the same high grade ingredients as the liquid polish. As many housewives are prejudiced against a liquid polish for their silver, the Majestic people have got out a silver polishing powder, which is a dry polish highly recommended as giving a lasting brilliancy to the article cleansed. The Majestic furniture polish is another line, made expressly for high grade polished wood surfaces, and there is no case where a good polish is more desirable. Nearly everyone has some idea how to go about polishing metals, but few amateurs have been successful in restoring the lustre to a highly-polished piano or other article of furniture. There is usually a hesitancy in tackling a piano, and well there might be, for it is too expensive an article to experiment upon, as many have found out by experience. For this class of work, however, the Majestic furniture polish has been proven to be a complete success.

Canadian National Exhibition—Majestic Polishes Exhibit.

Canadian National Exhibition—Exhibit of Berlin Woodenware Co.

Berlin Woodenware Co.

This company's exhibit was situated about the centre of the Process Building, they showing to the trade and others interested, their celebrated double-truss, high carbon steel wire extension and other ladders.

A particular feature of these ladders is the steel wire on each rail. This wire is attached to prevent side swaying, and materially strengthens the ladder. Norway and Georgia pine is used altogether and all attachments are of steel.

The trade should not fail to get this company's catalogue, as a good margin of profit is allowed and the goods are of such good quality that they will easily sell. Their ladders are specially adapted for fruit pickers and painters, and should be in good demand.

Mr. D. B. Betzner, the manager, who was in charge of the exhibit, is one of the first extension ladder makers in Ontario.

Besides the ladders this company is showing their Vollmar perfect working machine. Hammond support, the Whirlpool washer, step ladders, lawn settees, and clothes reel, which, like their ladders, are made of the best materials obtainable.

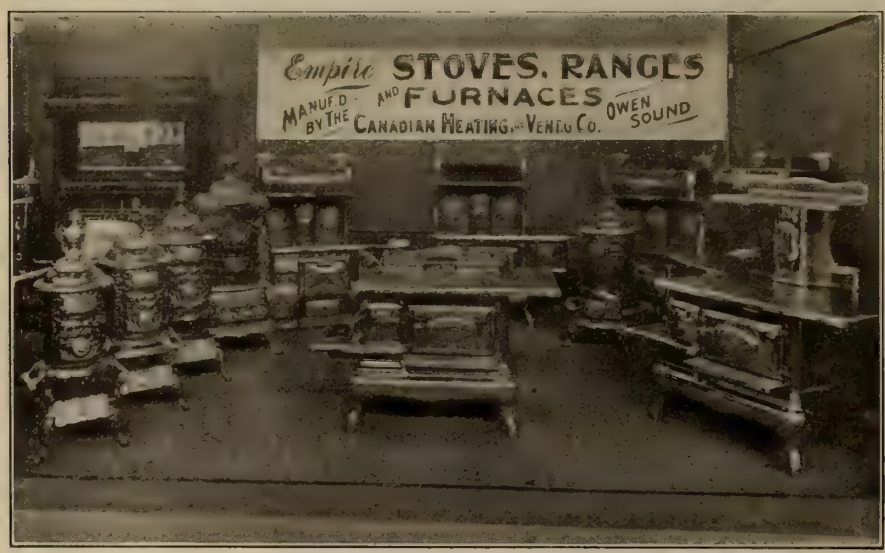
The Empire Heating Line.

The Canadian Heating & Ventilating Co. are known to the trade as manufacturers of Empire stoves, ranges and furnaces. Their exhibt of these lines in the Stove Building have attracted a great deal of notice during the fair, and it has kept Mr. Robt. G. Christie, the firm's representative, busy showing inquirers the good points of their stoves and ranges.

Their leading range, "The Empire Queen," is meeting with great success and is now handled by dealers from the Atlantic to the Pacific. It is the first plain range introduced in Canada with smooth castings, making it easy to keep clean, and elegant nickel trimmings. It has perfectly proportioned fire box, large oven, spinal flue construction.

The Empire steel range is made with 18 and 20 inch oven, with or without closet.

"Empire King" furnace shown by this firm, is attracting special attention along with a full line of base burners and oak heaters.



its own in price and quality with any of the imported mantles. Altogether it was a very creditable exhibit, and should prove very beneficial to the company.

The Gurney Foundry Co.

The white enamelled ranges with the polished brass and copper trimmings, shown by the Gurney Foundry Company was something new in display work. A black background made the outlines stand out boldly, and formed a contrast that was exceptionally striking. These ranges added greatly to the spectacular part of the Gurney exhibit, but did not by any means outdo the practical points that were brought out by their fine display of ranges and heaters.

Luxfer Prism Co.

The exhibit of the Luxfer Prism Co. in the new process building was one of the most artistic displays on the grounds, and attracted a great deal of attention. One feature was the memorial window, the subject of which was "The Easter Morn." A good many connoisseurs in this line complimented

Canadian National Exhibition—Exhibit of Canadian Heating and Ventilating Co.

As will be seen by the illustration, this exhibit is a very creditable one and we are safe in saying it will prove a profitable one for the "Empire" line.

International Gas Appliance Co.

A very fine display of International lights, Beaver gas mantles and fixtures were to be seen at the exhibit of The International Gas Appliance Co., of Toronto, in the manufacturers' building. W. M. Campbell, the manager, who just returned from Germany, brought with him some of the finest gas globes and fixtures ever shown in this country, and these were on exhibition, along with their regular line of beautiful and artistic globes. The "International" light, which has proved a leader with nearly every dealer in gas appliances created a great amount of interest, and should be the means of materially increasing the demand for this popular light. The Beaver Gas Mantles also came in for a good deal of notice. This mantle has already proved that it can easily hold the company on the artistic rendering of this subject. The company are also showing a very fine display of art glass for dwellings and all kinds of public buildings. The Luxfer Prism Department also received a great deal of attention and the number of inquiries indicate that the Luxfer Prism as a suppler of daylight for interiors is unsurpassed and indicate a great increase in business for the ensuing year.

Orlando Vickery.

The Rund instantaneous water heater was the interesting exhibit of Orlando Vickery, Toronto. The Rund system means hot water at all times, and an inexhaustible supply. There is no such thing in this system as an empty boiler. The tap can be kept open continuously and still the hot water comes. Mr. Vickery is the sole agent in Toronto for this new heater, and also for the porcelain and enamel baths of the Amherst Foundry Co., as well as many other plumbers' supplies.

Capewell Horsenail Co.

A show case of different makes and sizes of horseshoe nails ,made by the Capewell Horsenail Company, Toronto, was a very attractive exhibit. The "anything to give away" throng beseiged their stand continuously for the rings made from a nail which were given away in large numbers.

National Cash Register.

The National Cash Register Company had a showing of their registers which brought many merchants to seek them out. They had an pantomime going on between a little old clerk and a customer which was very funny. The figures were about fifteen inches high and went through many amusing antics.

Plymouth Cordage Co.

The Hobbs Hardware Company, London and Toronto, showed some fine lines of binder twine, ropes, lathyarn, etc., the manufacture of the Plymouth Cordage Company. The decoration of their booth was simple, but attractive. Light fabrics of white and gold alternated were used, which conveyed the idea of the sun's slanting rays.

Louden Machinery Co.

Louden's feed and litter carriers were interesting to all. With one of these carriers in a barn or stable the work is practically cut in two. Their cow stanchions brought to their exhibit a large number of cattlemen who gave the most favorable criticism of the Louden manufacturers. This company also make several lines of hardware specialties.

R. Chestnut & Sons.

R. Chestnut & Sons, Fredericton, N.B., had an exhibit of their canoes, by their Toronto agents, The Toronto Gas & Gasoline Engine Co. Their "sponson" canoes made many friends at the Fair. This is a new invention patented by Chestnut & Sons, which consists of air chambers running on both sides of the canoe from bow to stern, which make it impossible to capsize the canoe. For those who enjoy canoeing, yet fear the risk, the "sponson" canoe is just the thing.

Ontario Wind Engine & Pump Co.

The Ontario Wind Engine and Pump Company, Toronto, showed something particularly fine in pumps, gasoline engines and lawn swings. Their engines and pumps are already much in use and their new lawn swings met with wide favor. These swings hold four comfortably and have an easy gliding motion.

Canadian Rubber Co.

The Canadian Rubber Company, of Montreal and Toronto, in the Transportation Building, had an exhibit of horseshoe pads, tires, rubber covers, rugs, etc., that attracted many horsemen and carriage makers. Their Keystone tire for vehicles interested all who saw it, its shape and utility being readily appreciated.

Dunlop Tire Co.

The Dunlop Tire Company, Toronto, showed some of the newest ideas in horseshoe pads, bathtub mats and tires of all kinds. Their heavy tires for autos, motor wagons and larger vehicles were shown in the most approved styles.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 82.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Plumbers' Oakum—Has advanced to 3½ cents per pound.

Turpentine—Has gone up to 89 cents.

TORONTO.

Soil Pipe and Fittings—Discount increased to 65 and 10 per cent. for medium and heavy pipe and fittings, and 60 per cent. for light pipe and fittings.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 7, 1906.

Winter goods are moving strongly this week, and general business is very brisk. Large quantities of bread mixers, food choppers, cow ties and all other seasonable lines are going out right along. A heavy movement, too, is still being experienced in arms, ammunition and shot, and the aggregate of the season's business in these lines will be very large.

A scarcity of goods is very noticeable in many branches of the trade. It is difficult for the jobbers to get deliveries from many of the manufacturers, and as a result the retailers frequently find their orders short several items, when they arrive. In fact, one of the largest of the local wholesale houses reports that scarcely an order goes out which is completely filled.

A very satisfactory feature of the trade during the past Summer has been the practical freedom from price-cutting. A few lines, such as wire nails, have been slashed as usual, but on the whole prices have been maintained better than for years past.

AXES—A good steady business is being transacted. Prices remain as follows: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES — Trade conditions are about the same. There is practically no price-cutting going on at present, and we still quote as follows: No. 3 $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—Retailers are getting rid of good quantities, and repeat orders are coming in. Prices remain as follows: "Prism," $7; "Prism" globes, $1.20; Cold Blast, $4; No. 0 Safety, $3.50 to $3.75.

COW TIES—A large turn-over is being experienced in this line. We give discount on cow ties as 40 per cent. off list.

STALL FIXTURES—Large quantities are being shipped daily. Discount generally quoted is 35 per cent. off list.

SLEIGHBELLS—Shipments of booked orders are beginning. We give prices: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape, $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

RIVETS AND BURRS—Sales are large, and there is a continual demand for this line. We still quote: Best iron rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—Fall business is on, and heavy shipments are being made. We quote: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b. Montreal.

MACHINE SCREWS—No change has occurred in general trade conditions. We are still quoting: Flat head, iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—But little relief from the scarcity recently reported has been felt as yet. Jobbers are short in their stock of many sizes. We give discounts as follows: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS—The market is firm, and a good inquiry is reported. We still quote: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—We still quote $2.05 per keg base, f.o.b. Montreal.

CUT NAILS—A fair business is being transacted at $2.20 per keg base, f.o.b. Montreal.

HORSESHOES—With the approach of Winter and slippery roads, dealers are stocking up to meet the demand for horseshoes. We still quote as follows: P. B. new pattern, base price $3.50 per 100 lbs.; M. R. M. Co., latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs. extra.

BUILDING PAPER — Business has shown no change during the past week, though a more active demand will no doubt develop in the course of a few weeks, so as to prepare for shipments before the closing of navigation.

CEMENT AND FIREBRICK—A good turn-over in cement is the result, largely, of small orders. Firebrick is slow. We quote: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—Our prices are unchanged, and the recently advanced quotations are steadily maintained. We quote: 5-16 in., $4.30; 3-8 inch, $3.80; 7-16 inch, $3.60; 1-2 inch, $3.40; 9-16 inch, $3.35; 5-8 inch, $3.25; 3-4 inch, $3.10; 7-8 inch, $3.05; 1 inch, $3.

AMMUNITION—Although retailers all over the country now have their stock in, it has been found inadequate in very many cases, and sorting orders are already coming to hand. We quote: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto Sept. 6, 1906

A great many of the hardware travelers have been in during Exhibition and orders have necessarily been quieter, but were made up to a great extent by personal calls from customers who took advantage of the cheap rates and came to Toronto. There are no changes in price to record. Sorting orders constitute the principal business being done. Cutlery and table ware are being pushed just now, and business in these lines is reported good.

AXES AND HANDLES—Trade has picked up during the past few days.

CUTLERY AND SILVERWARE—An exceptionally good trade is reported.

SPORTING GOODS—Business continues good in most lines.

WASHING MACHINES—An ordinary business continues to be done.

CHAIN—We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; 3-8 inch, $3.95; 7-16 inch, $3.80; 1-2 inch, $3.65; 9-16

inch, $3.55; 5-8 inch, $3.45; 3-4 inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING — Our quotations are as follows: 2-inch mesh, 19 w.g., discount 50, 10 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE—We quote: $2.17 1-2 f.o.b. Cleveland.

BARB WIRE— We quote the following prices: On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65; f.o.b. Toronto.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The open market continues. We quote: $2.05 base.

CUT NAILS—We quote: $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7 1-2 off list. "M.R.M." brand, 55 per cent. off. "Monarch" brand, 50 and 7 1-2 off. "Peerless," 50 per cent. off.

HORSESHOES—Our quotations continue as follows: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

HORSE BLANKETS—Trade continues normal. General lines are selling well.

SLEIGHBELLS—Business is light.

FARM TOOLS—Forks are selling well and a good season has been experienced in all farm tools.

RIVETS AND BURRS—Tinned rivets are now quoted net extra 4c. per lb.

SCREWS—We quote: On gimlet point 70 and 5 per cent. off; on cone point, 70 and 10 per cent. off list.

BOLTS AND NUTS—Stocks are bare and supplies very hard to get. Demand is keen with prices very stiff. We quote 55 and 10 per cent. off list.

CEMENT—We quote: For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch fire brick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27 1-2c. to 35c.

WOOL AND HIDES—Quotations are practically unchanged.

Hides, inspected, steers, No. 1		0 12½

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Sept. 7, 1906.

So far as price changes are concerned, there is nothing whatever to report this week. On the whole, the market is firmer, and nearly all ingot metals are higher in tone than was the case a week ago, but none of them has actually advanced in price. The demand for all lines is exceptionally brisk, a condition which should continue until the close of navigation.

Spelter has advanced slightly in the Old Country markets, and importers state that it is quite scarce. It would not be surprising to see higher prices here, for the tone of the market has greatly improved within the past week.

Coffee is much firmer, and is commanding better prices for future delivery. There has been no change, however, in stock quotations. Almost the same remarks would apply to antimony, tin and lead.

Pig iron is firm, and high figures are being obtained. Booking for Fall delivery has been very lively, and a scarcity of many grades has developed. Some kinds of iron cannot now be purchased for delivery before the close of navigation. Throughout the season, a scarcity of the cheaper grades has been felt and it is accentuated now. Some furnaces have sold their output for months ahead.

Higher prices on galvanized iron are momentarily expected. Already the American manufacturers have raised their quotations, and find a large demand at the new figures. Large quantities have been booked for forward delivery.

COPPER—The market is firmer and higher prices are looked for. Meanwhile, we quote: Ingot copper, 21c. to 21½c.; sheet copper, base sizes, 25c.

INGOT TIN—As is the case with copper, the market price is unchanged, but conditions are firmer. We still quote: 44c. to 44½c. per pound.

ZINC SPELTER—Prices in London have once more advanced, but Montreal prices remain. $6.75 to $7 per hundred pounds.

ANTIMONY—This metal is also firmer, but is quoted at unchanged prices. We still quote 27c. per pound.

PIG LEAD—Last week's advance has held firm, and our quotations remain: $4.50 to $4.60 per hundred pounds.

PIG IRON—Cheaper grades of iron are very scarce, and some of them cannot now be ordered for delivery before the close of navigation. Our prices are:

"Dom.," No. 1, $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	delivered	Montrea
Carron No. 1	23.00	"	
" (special)	22.00	"	"
Summerlee No. 1	22.75	"	"
" No. 3 (soft)	21.75	"	"
Clarence No. 1	20.00	"	"
" No. 3	19.65	"	"
Cleveland No. 1	20.00	"	"

BOILER TUBES—We still quote: British and American tubes, 1¼ inch, 8½c.; 2 inch, 8½c.; 2½ inch, 10c.; 3 inch, 12c.; 3½ inch, 15¾c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Business is brisk at the following quotations: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror High Speed Steel, 60c.; Jowitt's Diamond J., 6¼c. to 7c.; Jowitt's Best, 11c. to 11½c.

MERCHANT STEEL—The usual trade is being done. Our quotations are as follows: Sleigh shoe, $2.17½; tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.15 base and upwards; square harrow teeth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—We still quote: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—Ameriean manufacturers have advanced and a general rise in quotation is confidentially expected. Until such takes place, we continue to quote: Queen's Head, 28 gauge, $4.35 to $4.60; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge, $3.35; Gorbal's "Best Best," 28 gauge, $4.25 to $4.50; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—We are quoting: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

CANADA PLATES—A large business is being done. Quotations remain: 52's, $2.60; 60's $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

TIN PLATES—The market remains steady at the following prices: Cokes, base size, 1C 14 x 20, $4; charcoal, base size, 1C, 14 x 20, $4.25.

TERNE PLATES—We still quote $6.85

SHEET ZINC—This line has followed zinc spelter, in the Old Country, but no advances have yet occurred here. We still quote: $7.75 in casks; $8 in less than casks.

SHEET LEAD—Last week's advance still holds. We quote: 2½ lbs., 5¾c. by the roll; 3 lbs. and heavier, 5½c. by the roll; small quantities, 25c. per hundred pounds extra.

BAR IRON—We are still quoting $2.05 base, f.o.b. Montreal.

OLD MATERIAL—Dealers' prices are: Light copper, 14½c.; heavy red brass, 14½c.; yellow brass, 11½c.; light brass, 8c.; lead, 3¼c.; zinc, 4c.; machinery cast scrap, $15; wrought scrap, $13 to $14; stove plate scrap, $12; mixed rags, $1 to $1.20 per 100 lbs.: old rubbers, 7¾c. to 8c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Sept. 7, 1906

With practically all the travelers off the road during the past week business from the country has been slack, the shortage being made up, however, by an increase in orders placed by Exhibition visitors. Prices have remained stationary during the week although talk continues of advances in galvanized sheets being probable. Both ingots and sheets remain very firm in prices.

With the continued advances in the iron and steel market some consumers who have not yet covered for far off deliveries appear content to wait developments. The pressure for early deliveries is supporting fancy prices.

PIG IRON—The market is strong and Hamilton No. 1 has been advanced 50c. Supplies are short and buying fur future shipments brisk. We quote: Radnor at furnace, $33; Hamilton at furnaces, No. 1, $21.50; Londonderry, f.o.b. Toronto, No. 1, $22.50; Middleborough, $22.50 to $23.

BAR IRON—Stocks are light and demand lively. We quote: $2.15 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

INGOT TIN—Fluctuations in outside markets have left prices about as they were. Locally the dealers are asking from 42c. to 43c. per lb.

TIN PLATES—Trade is active with prices unchanged. We quote: Cokes, base size, 14x20, $4; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS—Buying is active owing to the shortage reported in primary markets. We quote: 16 to 20 gauge, $3.65 up.

BRASS—The market continues firm with no price changes. We quote: 23c. to 24c. per lb.

COPPER—Prices are firm and the tendency is upward. Our prices are: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

LEAD—In response to the advances in foreign markets, $4.65 is now quoted for imported pig and $5 per 100 for bar lead.

ZINC SPELTER—Locally buying is active, but generally the markets are quiet. Prices remain unchanged. We quote: 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

BOILER PLATES AND TUBES — We quote: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60; tank plates, 3-16 inch, $2.45; tubes, per 100 feet, 1½ inch, $8.50; 2, $8.80; 2½, $10.75; 3, $12; 3½, $15.80; 4, $20. Terms, 2 per cent. off.

ANTIMONY—Good business is being done in small lots. Prices are unchanged at 27c.

OLD MATERIAL — Dealers' buying prices are as follows: Heavy copper and wire, 15c. to 15½c. per lb.; light copper, 13½c. to 14c. per lb.; heavy red brass, 13c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8¼c. per lb.; tea lead, $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs.; scrap zinc, 4½c. per lb.; iron, No. 1 wrought, $11; No. 2 wrought, $3 to $5; machinery cast scrap, $15; stove plate, $10; malleable and steel, $5; old rubbers, 7¾c. per pound; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—We quote the following prices: Anthracite in cars at bridge, egg, stove and nut, $5.50; grate, $5.25; pea $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. P. and S., $1; slack, 75c.; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1¼ inch, $2.55; ¾ inch, $2.45; mine run, $2.35; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

From the Iron Trade Review, Cleveland, Sept. 6, 1906.

While in most buying centres the shortage of pig iron for prompt shipment is not much relieved and extremely high prices are being paid by consumers caught short, conditions are gradually growing less tense and for forward delivery orders are being placed with greater deliberation. Even at that, however, the market is one of remarkable activity and in a number of quarters prices are noticeably higher. The pig iron production is slowly increasing, the new furnace of the Illinois Steel Co. at Joliet and one large southern producer have been blown in during the week. For the first quarter of 1907 southern iron has been selling at $14.75 to $15, though the latter figure is now the minimum. For northern No. 2 valley for first half delivery $15.50 is being secured and both Bessemer and basic are selling at near that figure, the former already being especially scarce.

The iron ore shipments during August were slightly in excess of 5,560,000 tons, thus falling below the record of July and making it certain that the season's movement will be considerably less than early estimates. Sellers continue to withhold prices for next year, though it is understood that practically the entire Bessemer supply as well as large tonnages of non-Bessemer ores are already under reservation. The car shortage, inevitable at this time of the year, is being felt to a greater extent than usual, interfering not only with ore and coke shipments, but with the delivery of finished products as well.

In finished lines new business was extremely heavy during August, and the usual midsummer lull was not felt. The American Bridge Co. alone booked about 50,000 tons during the month with prospects of heavier business during September. Plate mills are running behind on deliveries, particularly in the west, as the result of extremely heavy specifications. Sheet and tin plate orders are being booked for first quarter delivery with the shortage of steel curtailing operations of mills. There is heavy inquiry for bar iron, coming largely from car building interests.

Scrap continues to improve and is being used to a considerable extent by foundries which are unable to secure pig iron for quick delivery. Prices are generally advanced.

U.S. IRON AND METAL TRADES.

From the Iron Age, Sept. , 1906.

The excitement in the pig iron markets has quieted down somewhat, although the danger of a runaway market has not disappeared and is regarded in some quarters as imminent this fall, particularly in foundry iron. The action of one leading producer in the South in selling freely, for forward delivery at close to $15, Birmingham, for No. 2, has had a quieting effect. In a number of the principal distributing markets both the volume and the urgency of the inquiries for forward delivery are less pronounced, but there is some eagerness to cover immediate requirements. Gaps in deliveries on contracts at old prices have become somewhat frequent, and cause some high prices, which, however, are hardly a criterion of the market. At such spot prices foreign pig iron could be imported into such ports as Boston at a profit, but at the present range of values for forward delivery at home and abroad business is not practicable even at exposed points.

Steel makers view the rise in pig iron more complacently. Some of the largest interests have reached their full converting capacity anyhow, and with them it is a question of supplying the finishing mills with steel rather than of feeding the steel plants with pig iron.

There is some doubt as to whether we shall get down enough ore during the season for the requirements of the winter and early spring, and the coke supply, too, is causing uneasiness. In both cases the root of the evil lies in the shortage of labor, which is marked in nearly all the sections and in nearly all branches of the industries. Thus far the railroads have handled the transportation admirably, but here, too, the pressure of the enormous volume of business being done is beginning to find its reflection in hitches.

The price policy of the leading interests in finished iron and steel is again being put to the test. Premiums over official prices are beginning to crop up in bars, wire and sheets, and reports that advances are imminent are in circulation. While no assurances are given by the leaders, it is regarded as certain that a very conservative course will be pursued.

A good selling line in hot weather is bathroom fixtures. A window display of a shower over a bath ought to look catchy on a hot day.

LONDON METAL MARKETS.

PIG IRON— Cleveland warrants are quoted at 54s. 4 1-2d, and Glasgow standard warrants at 53s. 10d, making prices as compared with last week 9d higher for Cleveland warrants and 9d higher for standard warrants.

TIN—Spot tin opened firm at £184 7s. 6d, futures at £183 15s., and after sales of 280 tons of spot and 400 tons of futures closed strong at £185 for spot and £184 7s. 6d for futures, making price as compared with last week £2 15s. higher on spot and £1 12s. 6d higher on futures.

COPPER—Spot copper opened strong at £86 5s., futures £86 5s., and after sales of 400 tons of spot and 500 tons of futures, closed firm at £86 7s. 6d for spot, and £86 7s. 6d for futures, making price as compared with last week £1 12s. 6d higher on spot and £1 12s. 6d higher futures.

LEAD—The market closed at £17 17s. 6d making price as compared with last week 7s. 6d.

SPELTER—The market closed at £27 10s., making price as compared with last week 5s. higher.

New Brunswick Trade News

St. John, N.B., Sept. 3.

Business fairly good, with conditions generally satisfactory and free from striking features—that seems to be the verdict of most of the hardware people in this part of the world. Of course now, as at all times, it is possible to find merchants who will disagree with the opinion of the majority, but usually the view most generally supported is that which is nearest to being correct. The Fall trade has set in and though there is plenty of room for improvement the business done is reckoned as comparing very favorably with that of previous years.

Up at the Enterprise Foundry in Sackville the difficulty between men and employers still awaits adjustment. This trouble, which has already been spoken of in Hardware and Metal, has had the effect of causing some of the men to leave Sackville to take up work in foundries elsewhere. At last reports there seemed little prospect of an agreement being reached, but neither side has given much publicity to the affair. One story, which has not been denied, is to the effect that an attempt is to be made to make the Enterprise an "open" foundry.

The St. John exhibition is "the" attraction just now. Although it has not been long open it gives excellent promise of being an eminently successful fair. It may not be amiss to refer to some of the hardware exhibits in this column.

Emerson & Fisher have a splendid display of stoves and ranges. Those shown are the product of the Enterprise Foundry and all are good samples of the stove makers' art. The booth in which the stoves are shown is one decorated with red and is brightly lighted, the effect obtained being very pleasing. The most prominent of the ranges is the well known Monarch. Emerson & Fisher also show tiles, etc.

Philip Grannan, a north end dealer, heads his display with the Richmond range. The Richmond is shown off in Mr. Grannan's booth by a background of red, white and blue. Already the booth has been highly praised.

Then P. Campbell & Company, plumbers, etc., give prominence to the Scientific Acetylene Gas Generator. Samples of the generator are effectively displayed and the booth lighted by gas produced by one of the generators.

The McClary people, too, make a strong showing of their Pandora ranges. In some respects at least their booth is not excelled by any of the hardware and stove firms exhibiting.

London, Ontario, Trade News

The Ideal Concrete Co. has asked for an injunction against the London Concrete Co., both of this city, to prevent the latter concern making hollow concrete building block machines.

The Manufacturers' Committee of the City Council are considering an enquiry from the Ferresteel Co., of Cleveland, which wants to erect a branch factory here to manufacture warm air furnaces and furnace registers. They want to know London's railway facilities, and an approximate idea of property values, taxes, water rates and wages paid to machinists and molders.

Next week will see the Western Fair commanding the attention of many of London's hardware men and the exhibits of this and kindred trades are all in readiness for the big exhibition of Western Ontario.

A fire-proof building is being erected in this city, which, it is said, the owners will be safe in leaving uninsured. This is a 75x20 three story and basement building being erected by Green, Swift & Co., and which will be of cement and steel throughout. Of the latter there will be 160 tons and cement floors and stairs as well as walls will be put up. The Provincial Construction Co., of Toronto, have the contract and are to complete the work in eight weeks.

Nova Scotia Trade News.

Halifax, N.S., Sept. 5.

Trade continues good and in some lines business is quite brisk. Many of the firms are kept busy filling orders from outside points. There is great activity in mining all over the province and in consequence trade benefits. Some good sales of glass and roofing materials are reported. Axes, picks and shovels are selling freely, and there is a good demand for guns, powder, shot, and filled shells. There is no material change in the price list and collections continue good.

* * *

McLellan Bros., of Springhill, have been awarded the contract for the erection of a new building for the town. Their tender was $10,990. The tender includes plumbing and heating arrangements.

* * *

Rhodes, Curry & Co., of Amherst, have been awarded the contract for the erection of the new Royal Bank building at Amherst. The building will cost $60,-

Paroid Roofing Will Make Money for You

READ THIS:

Thousands of dealers all over Canada and the United States are making with Paroid one of their most profitable lines. If you are not selling Paroid it will pay you to get our proposition.

Why Paroid is the Best Ready Roofing Made

Paroid is the best quality of ready roofing made. Railroads, manufacturers and farmers all over Canada and the United States are using it in place of shingles, tin, iron and other kinds of roofings, because it lasts longer and costs less.

We make Paroid from start to finish —we make our felt—the most important part of the roofing, while other manufacturers buy their felt where they can get it cheapest. That's the principle reason why Paroid lasts longest. We could not stand back of Paroid if we did not make the felt.

Paroid is **soaked** and coated with a thicker, smoother, more pliable and durable coating than is on other ready roofings. Send for samples of Paroid and compare it with other kinds. You can see and feel the difference.

Paroid is applied with the **only** anti rust-proof cap made. It insures a tight roof. Other roofs often fail because the cap rusts out. Paroid will not crack and break in cold weather. It is adapted for all kinds of buildings and will outlast other ready roofings.

How We Help You

Our advertising plan has doubled the sales of our dealers this year. It helps to sell their other lines, too.

Send for our proposition and we will mail advertising matter and samples to every likely user of roofing in your town. It will not cost you a cent and can't help bringing you orders. We'll send you all the electrotypes and special things you can use. We'll write letters to prospective customers and send our salesman to help you land orders. Write, telegraph or telephone at our expense at any time.

The Fall is the best season of the year to sell roofing. Can you afford not to sell Paroid?

It won't cost you a cent to try out our proposition and we stand back of every roll of Paroid you sell.

Sign your name to a postal to-day and we'll send you full particulars and samples.

F. W. BIRD & SON

Makers

Factory and Office:

Hamilton, - Ontario

Established U.S.A., 1817.

000 and it will take a year to complete it.

* * *

The Nova Scotia Steel & Coal Company have opened up their quarry of limestone or dolomite on the McMillan property, at Red Islands.

* * *

It is reported that the King mine, at Brookfield, N.S., has been bonded to Boston capitalists and that work will be started soon. At the Mic Mac gold mine, the work of installing the machinery is still going on. It is stated that the improvements will cost $75,000. This mine when completed will have the greatest crushing capacity west of Halifax.

* * *

Arthur Austin, a young hardware merchant of this city, and Miss Ethel May Austin were married last week. They will spend their honeymoon in Boston and New York.

* * *

Two prominent English manufacturers are paying a brief visit to Halifax. They are Mr. Harold H. D. Anderson and Mr. Alfred Brooks, managing directors of the Associated Portland Cement Manufacturers (1900) Limited, of Dixon House, 72 Fenchurch street, London. They crossed the Atlantic on the Empress of Britain to Quebec and after visiting Montreal came on to Halifax. This is their first visit to Canada, and while it is largely for pleasure, they do not propose to lose sight of business opportunities. Concrete is now entering so largely into all kinds of construction work that the cement industry promises to assume large proportions, and Messrs Brooks and Anderson naturally look for large development along that line in this country. They are wide-awake business men and apparently much interested in Canada's progress. They will proceed as far west as San Francisco, where they hope to see the concrete building which withstood the earthquake and the fire.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

HIS 25TH ANNIVERSARY.

J. P. Conklin on Tuesday last celebrated the 25th anniversary of the date of his connection with Sanderson, Pearcy & Co. The occasion was taken advantage of by Mr. Pearcy to present Mr. Conklin with a handsome pipe with an inscription engraved upon a gold band circling the stem. Twenty-five years unbroken connection speaks well for both Mr. Conklin and the firm.

SEASONABLE SUGGESTIONS.

The hardware merchant who conducts a tinshop has a big advantage over the dealer who merely sells shelf goods. Every side line helps.

Push fruit goods, apple parers, preserving kettles, etc. Make window displays and write advertisements with these lines as leaders.

Always keep copies of mail order catalogues ready to hand for reference when anyone quotes catalogue house prices to you.

Low priced alarm clocks sell well in hardware stores in the west. Eastern dealers might try this line if they haven't already done so.

The Fall hunting season will soon be here. Wouldn't it pay to get out a business card on the back of which is printed the game laws of your province.

Go through the stock on the top shelves and see if there is not some good material for a bargain sale. The chances are that you have some old mouse traps or some small pieces of tinware that will not sell in a hundred years in the ordinary course of business.

SASKATOON WATERWORKS.

Mr. Fry, of Moose Jaw, has the contract for installing the waterworks system at Saskatoon for $73,000.

The ratepayers of Preston, Ont., have carried by large majorities two by-laws for the installation of waterworks and a sewerage system, entailing an expenditure of fifty-seven thousand dollars and sixteen thousand dollars, respectively.

EXPORT BOUNTIES ON STEEL.

A recent article in the Birmingham (England) Daily Post, indicates how Germany has increased her export trade, by payment of export bounties by steel syndicates. Abstracts from the article follow :

The system of granting private bounties on steel for export, introduced into Germany nine years ago by the syndicates controlling the coal, iron and steel trades of that country, was suspended on July 1. They have exercised a powerful influence on the foreign trade of our Teutonic rivals, and have been largely instrumental in stimulating German competition with ourselves in the markets of the world. Industrial syndication is more complete and more effective in the coal, iron and steel trades of Germany than in any class of industries in any other country, not even excepting America. The production and distribution of practically every important article in Germany, from coal and pig iron to sewing machines and wire nails, is controlled by a syndicate, which directly governs more than nine-tenths of the steel now produced in Germany, and materially influences British trade also.

These syndicates are efficiently conducted. Experts visit all the works associated, reporting upon the situation, the productive capacity, and the proportionate capabilities of each works in relation to the total syndicated capacity of production. The country is divided into districts, and each district and each works is given its due share of orders, all orders being received and allocated by the central offices. Especial care is, of course, taken to allot to each firm such orders as it is best adapted to execute. Payments, as well as orders, are received and remitted through the central offices, and each firm is credited only with that portion assigned in the order allotments. Prices also are usually fixed by the central offices.

In 1897 the system of export bounties on steel was inaugurated by the syndicate in control in order to facilitate German trade in foreign markets; in short, to promote "dumping" abroad and increased production at home. The measure of success is shown in the increase of pig-iron production from less than 7,000,000 tons a year to nearly 11,000,000 tons, and German exports of iron and steel have in the same time (1897-1905) gone up from 1,060,000 tons a year to 3,350,600 tons, while imports have declined from over 500,000 tons a year to less than 400,000 tons. While Germany has thus increased exportation by more than 200 per cent., Great Britain has stood still. To-day, while these German rivals are working up to the extreme limits of the capacity of their furnaces and works, and are being compelled to reject many orders for export, we have in Great Britain 150 blast furnaces standing idle. The lines upon which these bounties have been manipulated are that the coal syndicate, the pig-iron syndicate, the steel syndicate, the half-finished goods union, and others controlling raw or partly manufactured materials have supplied their customers with coal, coke, iron and steel at cheaper rates when used in manufacturing for export, and, with the home market protected by import tariffs, this bounty policy could not react, to any great extent, to the detriment of home trade, while assisting export trade. While bounties assisted our German rivals in getting into our markets, and into other markets outside their own country, the tariffs were instrumental in reserving their home markets—the bounty system and the tariff system being complementary corollaries, since the establishment of which German trade, at home and abroad has advanced by leaps and bounds.

Rise and Fall of Bounties.

From time to time the export bounties have been increased or reduced in response to the fall or rise in home demands, the object being to maintain continuous running of the mills. Even as recently as last year the bounties have been represented by 36 cents per ton of coal and coke, by $1.10 per ton of pig iron, by $3.65 per ton of ingots, blooms, and billets of steel, and by $4.87 per ton of plates, bars and shapes, these amounts being the difference in price between materials used for goods for export and those needed for home markets. By these means chiefly sales abroad have been effected at prices below those charged at home, even below cost of production sometime. For instance, during the last six months of 1900 German wire manufacturers sold in Germany 22,000 tons at a profit of $286,350, while outside of Germany they sold 19,000 at a loss of $209,000. Under this bounty system, aided by tariffs in Germany and by free imports into Britain, German steel plates have been obtainable at $24.57 per ton when British makers could not accept less than $37.07, with results well known to our manufacturers and workmen.

The Peterborough Steel Rolling Co. have asked the Peterborough citizens to vote them a free site and tax exemption.

Brighten Up

The "Brighten Up" Campaign we are giving our agents this Fall is the best and most successful paint campaign ever planned for the dealer. It has built up profitable trade everywhere and brought new business that could not have been secured by the dealer alone. It has materially increased the paint trade of every agent who has taken advantage of it.

This is just an example of what we are constantly doing for our agents to help them secure bigger business. We co-operate with them and work with them to attain the fullest measure of success.

The Sherwin-Williams Products back up this advertising and make satisfaction assured. They are the best paints and varnishes that can be made, the standard of quality throughout the world.

Are you a *Sherwin-Williams Agent?*

Are you getting the benefits of our "Brighten Up" Campaign?

If not, write for our proposition.

PAINT, OIL AND BRUSH TRADES

THE CARE OF BRUSHES.

Bad painting is often a matter of bad brushes—brushes that have not been taken care of properly, says an exchange. Twisted bristles and misshapen ends will make the best paint cover poorly and always deface the surface with brush marks. Most practical painters recognize this and are careful to see that their tools are right and kept in good condition. The following pointers from the Paint, Oil and Drug Review, will prove instructive:

Temperature of brushes: The bristles of every brush are held in place by the handle. It passes through the shank of the brush and is kilndried to fit properly. If it shrinks, however, its outward tension is lost and the bristles loosened. For this reason the first principle in brush care is to kep the tool, when it is new or not soaking, in a cool place, out of hot rooms, and any temperature that would tend to shrink the wood of the handle. It is a point to be kept well in mind by the dealer, as well as the consumer.

Cleaning paint brushes: No new brushes should be dipped in the paint and put to work without first being cleaned. By working it with a brisk movement back and forth through the hand most of the dust and loose hairs will be taken out. A paint brush, when thus thoroughly "dry cleaned," should be placed in water for a few minutes, but not long enough to soak or swell it, but only until wet through, and then swung and shaken dry. It is then ready to dip in the paint, and although some of the hairs may still be loose, most of them will come out in the first few minutes' working and can be easily picked from the surface.

For the first two or three days new brushes require special care while at rest. They should be dipped in raw oil or the paint itself and smoothed out carefully, then laid on their sides over night. The chisel pointed bristles should be set at an incline, the handle supported just enough to allow the brush to lie along the point. This is done to prevent twisting of the bristles, and to keep the shape of the brush perfect. It is necessary to do this only two or three times before the shape becomes set.

The second most important principle in brush care is never to leave the brush on end while at rest. At night it should always be placed in a "brush keeper"—a water-tight box or a paint keg, with nails driven through the sides, on which the brushes can be suspended in water. Holes are bored in the handles so the brush will hang free of the bottom, but with the bristles entirely under water Before placing them in water the brushes should be wiped so as not to be too full of paint, but not cleaned. Even for temporary rest during a job the brush should never stand on end.

Varnish brushes, and brushes used in varnish stain, buggy paint and all color in varnish, require different handling than paint brushes. They should be more thoroughly "dry cleaned" for one thing in order that all loose hairs may be worked out. After working them through the hand it is a good thing to pass the brush back and forth over a sheet of sandpaper. This rough surface will pull out the loose bristles and smooth down the rough ends of the chisel point. The brush should then be washed by working it for a few minutes in clean turpentine and swinging it dry. It should never be put in water. For carriage work and fine varnishing the brush should be "broken in" on the rubbing coat in order to work out all the dust particles before it is used on the finishing coats.

Varnish brushes should be kept at rest in turpentine and varnish, or better still, in some of the varnish that the brush is used in. They should not be kept in turpentine only, as that makes the brush "lousy"—roughens the bristles. All brushes should be washed in benzine or turpentine and shaken dry—not whipped—when it is desired to change from one color to another or from one varnish to another.

If these simple rules are followed brushes will be found to last longer and the painting will turn out much better than it would otherwise. As a general thing the brushes are an index to the worth of the painter—the better the brush, the better the painter.

ZINC PAINT.

Livache and Potain have been experimenting on this subject, and they find that in order to prepare a satisfactory paint zinc white requires about 20 per cent. more oil than white lead, but that zinc paint also covers 20 per cent. more surface. In order to secure proper drying they recommend the addition of a sufficiency of turpentine and one per cent. of resinate of manganese.

In a letter received from a British Columbia Customer he says:

"That Hollywood Paint of yours has exceedingly good covering qualities, much better than white lead and goes farther."

This is a general verdict from the Atlantic to the Pacific.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 7, 1906.

No changes have been made in market quotations this week, so far as the jobbers are concerned, but all prices as quoted in our last issue are very firmly held.

Importers are again advancing their price on white lead, and are experiencing considerable difficulty in securing deliveries. Red lead is also exceptionally firm, and it is expected that this line, too, will advance, in sympathy with all lead products.

Both linseed oil and turpentine are unchanged in value, on a steady market. All staple lines are selling actively.

LINSEED OIL — Prices have been steadily held since our last report, and we are still quoting: Raw, 1 to 4 barrels, 52c.; 5 to 9 barrels, 51c.; boiled, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.

TURPENTINE — Our quotations are as follows: Single bbl. 87c. per gal.; two barrels or over, 86c. per gal; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC— The market remains unchanged at following prices: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c., smaller quantities, 8½c.

RED LEAD—The market is stiffening, though prices locally remain the same. We still quote: Genuine red lead in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

GUM SHELLAC—Prices remain unchanged as follows: Fine orange, 60c. per lb.; med. orange, 55c. per lb.; bleached shellac (white) 65c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

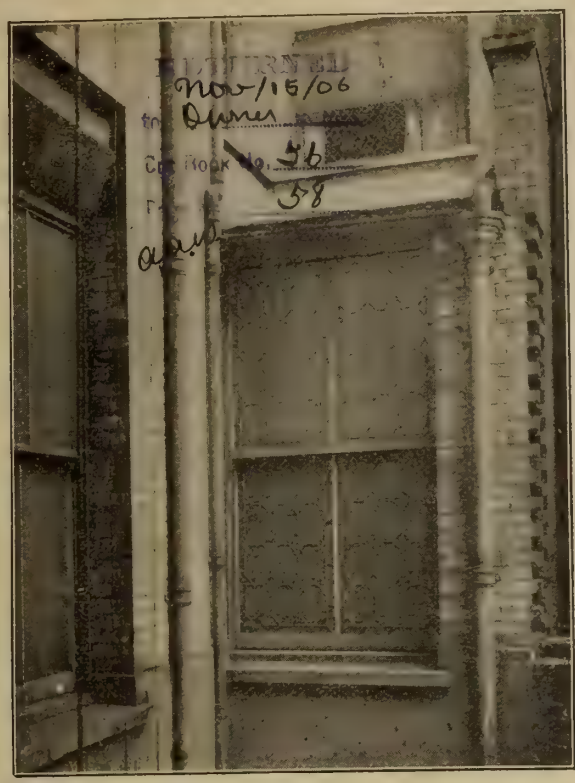
MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—Importers have advanced prices on seconds, and jobbers' prices are firmer. We still quote, however: Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

GASOLINE—The ruling quotation at present is 24c. in bbls.

BENZINE—There is nothing new this week and we are still quoting 20 1-4c in barrels.



WINDOW GLASS—Good business is being done. The large number of new houses which are just ready for finishing touches is responsible for a very large demand. We quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.70; third break, 100 feet, $4.25; fourth break, 100 feet, $4.45; fifth break, 100 feet, $4.70; sixth break, 100 feet, $5.25. Diamond Star: First break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second break, $4.80; third break, 100 feet, $5.75; fourth break, 100 feet, $6.50; fifth break, 100 feet, $7.50; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8; eighth break 100 feet, $9. Double Diamond: First break, 50 feet, $3.45; second break, 50 feet, $3.75; first break, 100 feet, $6.75; second break, 100 feet, $7.25; third break, 100 feet, $8.75; fourth break, 100 feet, $10; fifth break, 100 feet, $11.50; sixth break, 100 feet, $12.50; seventh break, 100 feet, $14; eighth break, 100 feet, $16.50; ninth break, 100 feet, $18; tenth break, 100 feet, $20; eleventh break, 100 feet, $24; twelfth break, 100 feet, $28.50.

TORONTO.

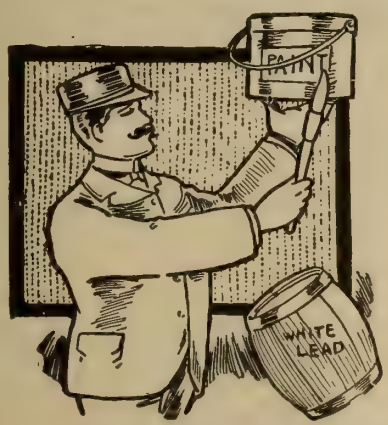
Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, September 7, 1906.

Both turpentine and linseed oil hold at the same prices as quoted last week. Turpentine is firm at the present price, but linseed oil is hardly as strong. The cutting that has been going on in white lead in some quarters has about stopped, it no doubt having been found that there was no reason for cutting the price while such a condition of scarcity prevailed. Business is slacking off a little, but the Fall trade shows quite as good prospects as were ever shown before.

WHITE LEAD — Ex Toronto, pure white, $6.30; No. 1, $5.92 1-2; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; 1-2c. per pound extra will be charged for

This Illustration

shows the ornamental glazing of



MAXIMUM LIGHT GLASS

There's nothing unattractive about that window, is there? You see the glass can be cut, glazed and mounted in lead, copper or iron intersecting bars, from architects' special designs. The fact that you can get samples of this glass should lead you to get them.

BRANTFORD, CANADA

THOMAS BLACK, 76-82 Lombard St., WINNIPEG, Man.

THE FALL

is presumably the best time to paint. After the first appearance of cold weather the flies, like the proverbial angels' visits, become "few and far between." The clouds of dust cease, and the absence of muggy, steamy weather facilitates paint drying, and one is in a jolly mood (or should be if your liver is working right !) to wield the brush.

Take an hour in the paint and varnish department and note in your "want book" defficient lines of dry colors, colors in oil, coach colors, white lead, wagon paint, wood stains, house and carriage varnishes, buggy and sleigh paints, ready-mixed paints, especially the floor paints. Now turn to barn paint, stove pipe varnish, aluminum and gold paint. Look into asbestos stove lining and don't forget the putty. The latter is of little intrinsic value, but of immense commercial importance.

One or two lines should be singled out and pushed every day by what is called in England "the introduction method." This means: after a customer has made an ordinary purchase, you tactfully and "with winning grace" show him a small tin, say, of aluminum paint, and remark, "Have you seen our silvery aluminum paint ?" Show it off by painting a few strips of stove pipe iron. Don't be too obtrusive, but enlarge upon its merits. Now hand out a liquid paint folder and sweetly invite the customer, him or her (especially her), to "come again!" Change your specialties each day, or at least every other day. Keep a bright look out for casual telephone orders, and make a list of your largest regular buyers, and call them up, at least once a week, for **"anything on the list, please ?"**

Having done this, mail a nicely assorted order to

THE CANADA PAINT COMPANY
LIMITED

12 1-2 pound packages; genuine dry white lead in casks, $5.40.

RED LEAD—Genuine in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.60; No. 1 in casks of 500 lbs., $5.50; ditto, in kegs of 100 lbs., $5.75.

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM— We quote: Canadian, $1.32; Pennsylvania, $1.58; Ohio, 96c.

WHEN VARNISH TURNS WHITE.

It is commonly supposed by house painters that when a varnish turns white it is indicative of faulty varnish. This, however, is far from always being the case, says the Decorator.

Let us consider interior varnishes first. Turning white in this case, is usually accompanied by a distinct tendency towards brittleness and powdering; indeed in not a few cases the so-called whitening is merely the result of the surface turning into powder. We put out of sight at present spirit or turpentine varnishes and consider only true oil varnishes, and with this limitation it may be said emphatically that no good oil varnish ought to show this defect. If it does, and if no other possible cause of whitening can be discovered, then the varnish is unsuitable. In all probability it contains rosin. In any case whether it contains rosin or not, it is too brittle for the purpose in view, and brittleness, powdering and turning white, as stated above, go hand in hand. But let the careful decorator ponder over the words "if no other cause of whitening can be discovered"—for here lies the root of the matter.

There are several causes of whitening and brittleness which are quite outside the varnish itself, and these must be sought for and investigated before a bona fide complaint can be made regarding the varnish. Moisture is a frequent and serious cause of varnish turning white. It is often found that varnish over stain or size shows this defect, while the same varnish applied on a dry surface is perfect. Here we have a clue at once. Another fruitful cause of the same trouble is the presence of rosin under the varnish. It is well known that new woodwork that is to be varnished is often primed with a spirit varnish in order to stop the suction of the wood. Such spirit varnish nearly always contains rosin, and is also very brittle, and experience has proved that a floor varnish applied under such conditions is somewhat liable to turn white. No complaint is here made of the practice of using spirit varnish as a filler or priming on new wood. The points to be observed are to see that the spirit varnish does not merely consist of rosin dissolved in methylated spirit, and that the coating of spirit varnish is just thick enough to sink into the surface of the woodwork without leaving a layer of brittle material on the surface.

VALVE MAKERS FOR MONTREAL.

A few weeks ago we announced that it was the intention of Jenkins Bros., Bridegport, Conn., to establish a plant in Montreal from which to supply the Canadian trade.

Arrangements have now been completed for the erection of a fine modern factory at St. Paul, a suburb of Montreal, and a plot of land 350 feet by 450 feet, situated between the G.T.R. tracks and the Lachine Canal, has been purchased for the purpose.

The contracts will be let in a few days and it is expected that the machinery, which has already been ordered, will be installed by April next. The factory building will be constructed of brick, will have a frontage of 200 feet, a depth of 50 feet, and will be three storeys high. The foundry building will be of fireproof construction, measuring 150 feet by 64 feet, and the engine and boiler house will be 45 by 60 feet.

The plant will be considerably extended after operations have begun, if present expectations materialize.

TO THE VARNISH BUYER

the most serious considerations are quality, reliability and uniformity, and these qualifications are of special importance to the dealer who is trying to build up a permanent varnish trade.

Berry Brothers' label or brand may be safely relied upon as ensuring the above conditions.

Our varnishes are the safest goods to handle and the surest and most reliable goods to use.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

A new Presbyterian church will be erected at Cobalt.

The Galt Malleable Iron Works have started operations.

A new library building will be erected in Bracebridge, Ont.

Barber & Co., Vancouver, are erecting a new mattress factory.

R. A. Ruttan will erct a three-storey brick block in Port Arthur.

A new opera house will be built in Berlin to cost about $40,000.

The C.P.R. are about to erect a new saw mill at Holsmer near Fernie, B.C.

The planing mill of Alderman Gerry, London, Ont., has been destroyed by fire.

A new bank building will probably be erected by the Toronto Bank in Calgary.

The Dowswell Mfg. Co. will build a warehouse to cost $3,000 in Leamington, Ont.

Gowans, Kent & Co., Toronto, are erecting a large factory on King street, west.

Shurley & Dietrich, Galt, have under way the construction of a large new factory.

A large new commercial block will be built by J. W. Horn in Vancouver, to cost $25,000.

The erection of a six-storey business block in Vancouver is contemplated by A. G. Hamersley.

R. C. Fuller & Co., chemists, Amherst, N.S., are making improvements to their works to cost $2,000.

It is expected that an oil refinery will be established at Chatham, Ont., within a very short time.

A new convent building will be built at Lachine, Que., by the Sisters of Ste. Annes to cost $500,000.

The Massey-Harris Co. are making an extension to their storage building in Brantford, to cost about $20,000.

Fire destroyed a factory building at Bowmanville this week just after the Durham Rubber Co. had vacated it.

The French firm of St. Frere are considering the establishment of a plant in Canada for the manufacture of bags.

John Pillans Carluke, Scotland, says that he intends locating a factory in Canada for the manufacture of bolts and screws.

Mr. Frederick Mossop will shortly erect a new six-storey hotel on Yonge street, Toronto, to cost in the vicinity of $100,000.

The Canadian Oil Co. are considering the establishment of a branch warehouse and office at either Port Arthur or Fort William.

The steel plant of the Northern Iron & Steel Co., Collingwood, Ont., has been started up after a period of idleness of about two years.

Work on the construction of the new building for the Canadian Bank of Commerce in Montreal will be commenced early next Summer.

The contract for the construction of the new Y.M.C.A. building in Calgary, Alberta, to cost $55,000, has been let. Work on the building has commenced.

The output of steel rails from the rail mill of the Lake Superior Corporation during the past fiscal year has been 62,000 tons in excess of that of last year.

Negotiations are in progress for the establishment of a manufacturing plant at Goderich, Ont., by an American firm for the manufacture of baby carriages, go-carts, etc.

The Boundry Iron Works Foundry, Grand Forks, has been completely destroyed by fire together with the machinery installed. The loss will be at least $35,000.

The Town of Qu'Appelle is considering the question of granting a franchise to the Moore Milling Co. for the installation of an electric lighting plant for that town.

The value of building permits issued by Winnipeg during the month of August of this year showed a decrease of over $150,000 over that of last year for the same month.

It is announced that the Ames Holden Co., Limited, will devote a portion of their recently increased capital to the building of a new factory at Montreal, to cost about $200,000.

The contract for the erection of shops and stores buildings for the Intercolonial Railway at Moncton, N.B., has been awarded to E. A. Walberg, Montreal, the contract price being about, $160,000.

Jenkins Bros., Bridgeport, Conn., are establishing a branch plant for the manufacture of valves in the district of Montreal. The factory building will be of brick, three storeys in height with a frontage of 200 feet and depth of 50 feet.

The Canadian Ethinite Co. are making arrangements for the building of a large factory at Niagara Falls, Ont., where they will make "ethinite," the product having similar properties to calcium carbide, which will be used in the making of acetylene gas.

The Amherst Foundry Co., Amherst, N.S., are making an addition to their foundry building, the size being 75 x 60 feet. This addition to their foundry will enable the company to largely increase their output of enamelware. The cost of the addition will be $4,500.

Two sets of capitalists are discuss-

¶ We recognize no competition, on the ground that the manufacturer who makes better goods than his competitors has no competitors.

¶ Also the unique labor-saving features of our systems for business belong solely to us, the originators of them. Others may imitate the principles of our protected methods, but they cannot duplicate these, or the thoroughness and quality of our work.

¶ Copeland-Chatterson labor-saving devices for accountancy for wholesale or retail are no experiment—they are being used daily by 12,000 merchants in Canada and Great Britain. It won't pay you to pass them by.

Write to us for our business literature.

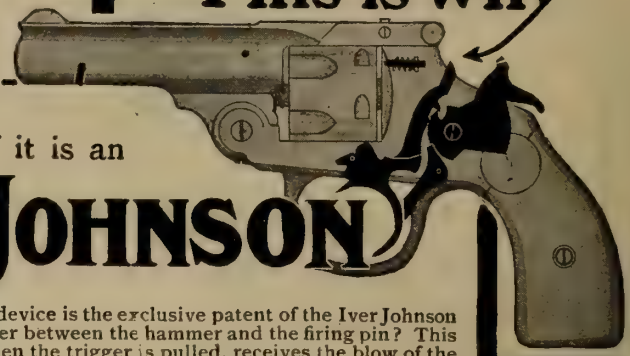
ing with the Dominion Government the proposition of establishing a smelting plant near Ottawa for the smelting of iron ore by the electric process. Electric power would be obtained from an electro-hydraulic development at Shaw Fall on the Ottawa River.

The National Spring & Wire Co., Albion, Mich., are considering the erection of a plant in Canada, and are visiting different towns and cities in order to find a suitable site. From these towns and cities they are asking a free site and buildings and also exemption from taxation for a number of years.

The C.P.R. has placed an order for 50 locomotives with the American Locomotive & Machine Works at Montreal, Que., to cost $19,000 each. Two weeks ago the same company completed an order for 35 of the same type. These orders are in addition to those built by the C.P.R. at the Angus shops, where one locomotive a week is turned out right along.

The town of Leamington, Ont., is considering the proposition of lending Wm. C. Campbell, Detroit, $30,000 for the establishment of an automobile factory in that town. A by-law will probably be passed by the council to that effect.



Permits for the erection of buildings valued at $8,660 525 have been issued this year up to the end of August by the city architect of Toronto. This is an increase of nearly $1,500,000 over last year.

The Canadian steel companies continue to do very well. A Sydney despatch says: "Last month was a record in the production of steel from the open hearth plant of the Dominion Iron & Steel Co., the output being 22,000 tons." The Soo Co. made a new record in August, turning out 17,865 tons of steel rails. The record output for 24 hours was 1,004 tons. At current prices this is equivalent to a value of about $600,000.

In connection with the proposed $450,000 German-Canadian Cobalt smelter to be established on the Temiskaming Northern Railway, it is stipulated that the German process to be used must be kept secret, and the experts to be Germans. The works will be started with the wet and dry process, first a concentrating plant to treat low-grade ores, then a cobalt oxide works, and lastly a roasting plant. In Germany 52 per cent. of the world's production of cobalt oxide is used, and the German superintendent guarantees a market for 100,000 pounds annually.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

MONTREAL BUILDERS CELEBRATED.

Taking advantage of Monday's holiday, the Montreal Builders' Exchange planned and carried out the most successful outing in their history and everybody was so pleased with the trip that talk of another one next year is already heard.

In former years the master builders have celebrated the holiday by a drive around the city and district of Montreal. A new departure, however, was made this season and a trip to Quebec was decided on. To avoid the unpleasant feature of the regular excursion a special steamer, the Three Rivers, was chartered and the builders with their wives and friends to the number of about 200 took full possession, a moderate charge being made to cover all the expenses of the trip. A popular feature of the trip was that the boat sailed, both going and coming, at four o'clock in the afternoon, thus allowing the passengers a fine view of the St. Lawrence in its upper and lower reaches by daylight.

On Sunday, the excursionists visited the shrine at St. Anne de Beaupre, and returning to Quebec, inspected, on invitation of the C.P.R. officials, the new Atlantic liner, "Empress of Ireland." All were greatly impressed by the magnificent equipment of the liner. "From a hardware standpoint," said Secretary J. H. Laner, to the representative of Hardware and Metal. "the equipment of the "Empress of Ireland" is an object lesson. The enameled baths in every section, and the wash basins of the same material in each stateroom, the kitchen hardware and the heating and ventilating arrangements, would be of the greatest interest to all your readers."

On Monday, the builders accepted the invitation of M. J. Walsh, M.L.A., to visit the Parliament Buildings, where they were also received by Hon. Mr. Kane and Mrs. Kane. The museum in the buildings, attracted great attention.

The excursionists next took a special car on the line of the Quebec Railway & Power Co. to Montmorency Falls. The Kent House was reached about noon, and after lunch the ladies preferred to remain here while the gentlemen of the party braved the inclement weather to inspect the power house and dam. The greatest admiration was aroused by this great dam, which is 84 feet wide, with a thickness of 74 feet at the base, tapering to 12 feet at the top. When completed it will give a reservoir of 52,000,000 gallons capacity and raise the level of the water for three miles back enabling the company to supply all necessary power for Quebec city at all seasons of the year.

Just as the party embarked for the return journey the clouds lifted and the sun came out so that a fine view of the St. Lawrence was had until dark.

The success of the outing was due in large measure to the efforts of J. H. Laner, secretary, and J. O. Deslaurier, first vice-president of the Master Builders' Association of Montreal.

Other officers of the Exchange, who took part in the excursion were: James Simpson, past president; Edward A. Roberts, past vice-president, and Alex. Bremner and W. E. Ramsay, directors.

If you haven't established a "bargain" department in your store spend a hundred dollars in getting a line of cheap novelties for the bargain tables. If well managed this department should be one of the best paying in the store.

BUSINESS CHANCES

$3,000 will buy a good hardware, plumbing and heating business in the prosperous city of Sherbrooke. Owner wishes to retire. Apply Box 107, Sherbrooke, Que. [tf]

HERE is what you want—a tinsmithing and plumbing business in sunny Alberta town, with 1,200 population; no opposition; $3,000 will handle business; lot and building 14 x 36; last year's business $8,000; act quick, good reason for selling. Address, S. Case, HARDWARE AND METAL, Winnipeg. [35]

WELL selected stock of hardware stoves, tinware, tinshop tools, etc. In first-class section of Ontario. Good reasons for selling. Stock about $4,000. App'y Box 549, HARDWARE AND METAL, Toronto. [39]

SITUATIONS VACANT

FURNACE MEN WANTED—Highest wages are offered to competent furnace men in the largest cities in the west; also splendid openings for mechanics with a general knowledge of steam fitting and furnace work. Apply to The Pease-Waldon Co., Limited, Winnipeg, Man.

HARDWARE salesman wanted, one who thoroughly understands hardware, must be good stock keeper and window dresser, state age, experience and salary required. Box 548, HARDWARE AND METAL Toronto. [34]

WANTED—Hardware salesman with about four years' experience. Write at once with references. Good position for the right man. Apply to The Bond Hardware Co., Limited, Guelph, Ont. [34]

WANTED—Capable young man with fair knowledge of mechanics and good appearance as city traveller in Winnipeg. Good position for right man. Box 57, HARDWARE AND METAL, Winnipeg. [35]

SITUATIONS WANTED

HARDWARE clerk, with nine years' experience, wants position with hardware firm. Can give best references. Box 554, HARDWARE AND METAL, Toronto.

WANTED—A position as traveling salesman by young man with thorough knowledge of hardware. Now employed on the road. Eastern territory preferred. Box 47, HARDWARE AND METAL, Winnipeg.

WANTED—Position as salesman or Traveller in hardware lines, carriage goods or paints (manufacturing or general wholesale). Age now 47; thirty years experience as traveller, retailing and jobbing, have travelled all over Canada; good references. Apply to HARDWARE AND METAL. [37]

WANTED—First-class tinsmith, must understand furnace work, steady job to right man. Apply stating age, experience and salary expected. Bandman preferred. Good town in Alberta. Box 553, HARDWARE AND METAL, Toronto.

WANTED position in west by retail hardwareman; eight years experience; general and builders' hardware, stoves, etc.; understands ad writing and window dressing; can give best reference. Address 544, HARDWARE AND METAL, Winnipeg. [36]

PLUMBING AND STEAMFITTING

THE PLUMBING OF A COTTAGE

By J. A. F. Cardiff in the National Builder, Chicago.
Article X. (Continued.)

Traps.

Before taking up the consideration of the one-pipe system of soil and waste stacks, it has seemed advisable to study the various forms of traps especially the non-siphonable trap, which is the fundamental principle of the one-pipe system.

The purpose of the trap is to hold a body of water to act as a barrier to the passage of foul air or gases without interfereing with the flow of the sewage. The main house trap prevents the entrance of foul air and gases from the sewer, while the fixture and other traps prevent the bad air and gases generated within the drainage system from escaping through the house.

The two most important requirements are a perfect water seal, that is, one that cannot be siphoned or otherwise broken, and the ability to be self-cleansing with each discharge from the fixture on which the trap occurs.

Traps are known as siphonage traps and non-siphonable traps. The former are the type more commonly used The

FIG. 42.

FIG. 43

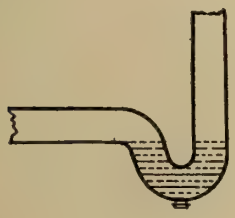

FIG. 44.

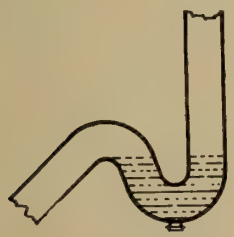

FIG. 45.

latter are of comparatively recent introduction.

Siphonable Traps.

This type of trap is made in the following forms: Fig. 42 is a running trap, Fig. 43 is an "S" trap, Fig. 44 is a half "S" trap, and Fig. 45 is a three-quarter "S" trap.

The pocket formed by the shape of the trap, fills with water and seals the passage through which the gases would naturally escape if unobstructed. This water barrier, indicated by the dotted lines in the cuts, is called the seal of the trap. Each trap should be fitted with a brass screw cap clean-out on the underside of the dip.

These traps, as will be readily seen, have the requisite self-cleaning quality, but are liable to lose their seal by any one of or a combination of the following actions: Siphonage, capillary action, evaporation and back pressure, all of which are hereinafter explained in detail.

Siphonage is best explained by the illustration Fig. 46, which represents a barrel of water (B), from which it is desired to draw the water by means of the bent pipe (C), into the pail (D). This may be accomplished by placing the lower end of the pipe in the mouth and removing the air in it by suction. The atmospheric pressure on the upper surface of the water then causes the water to flow into the vacuum caused by the suction, and it passes through the pipe into the pail. This flow continues until the water in the barrel lowers to the inlet end of the pipe, when the air entering destroys the vacuum and stops the flow.

The similarity between this example and the trap (A) is readily apparent; the vacuum being formed by the discharge of a fixture on a higher floor (see arrow) as it passes the branch soil or waste pipe. This vacuum draws enough water from the trap to break the seal. Capillary action is caused by hair, lint, pieces of thread, etc., discharged with the waste, lodging on the upper bend of the trap as shown in Fig. 47.

These substances accumulate at this point and dip down in the trap seal on one side and the outlet end on the other. They draw the water out of the trap in the same manner that the oil may be drawn out of a lamp if the wick is allowed to hang over the edge of the bowl. The greater the quantity of hair, etc., the quicker the seal will be broken, and the substance will remove the water in the trap down as far as it reaches in the seal. The effect of capillary action on trap seals is particularly dangerous because it is not likely to be detected and is as liable to occur in the most modern plumbing work as it is in inferior work. Where a reasonable amount of care is exercised by those using the plumbing fixtures this substance is not likely to gather, but, we regret to say, it is a very infrequent occurence to find a plumbing system that is not abused.

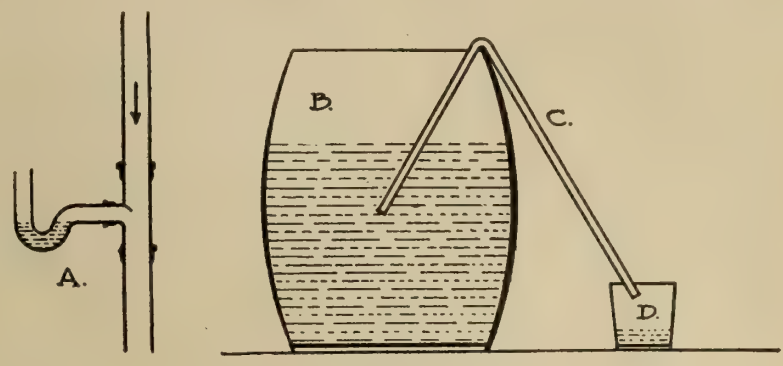

FIG. 46.

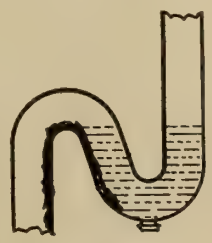

FIG. 47.

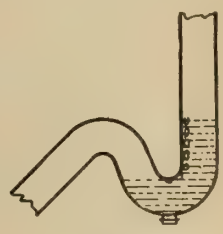

FIG. 49.

Evaporation is another action having a detrimental effect on the trap seal, and one that is more active in a modern system with vented traps than in the old style with unvented traps. This is because the current of air entering through the vent and passing over the water, greatly increases the rate of evaporation. The rapidity with which a vented trap will loose its seal by evaporation ranges from two to two and one-half weeks, de-

pending on the atmospheric conditions. An unvented trap will maintain its seal twice as long. For this reason it is advisable to connect the vent pipe to the trap a little away from the crown of the trap as at (A), Fig. 48, rather than directly over the water seal as at (B). Another advantage of such a connection is that there is less chance of the current of air chilling any grease that may be on the surface of the water in the trap, and thereby causing an obstruction.

Where any fixture is not used with sufficient frequency to protect the seal from evaporation, care should be taken to discharge a sufficient amount of water into the trap at least twice a month. When a house is going to be left vacant for any length of time, evaporation may be prevented by pouring a little oil in each trap. Fixtures which it is known will be seldom used, should be provided with special traps having deep water seals.

Back pressure is the force exerted by the pressure of the air within the plumbing system and tends to force the water in the trap upward sufficiently to allow the air in the system to blow through the seal as indicated by the bubbles in Fig. 49. This back pressure is generally caused by the wind or a sudden discharge of a large body of waste. When the seal is broken by the wind, it is usually because the pressure exerted against the water, by the high wind blowing through the system, is much greater than the pressure opposing it on the room side of the seal owing to the air within the room being much warmer. When caused by a large discharge of water, it is because the discharge completely fills the bore of the pipe, thereby compressing the air within the system to such an extent that it forces its way up through the seal of the trap where it meets with the least resistance.

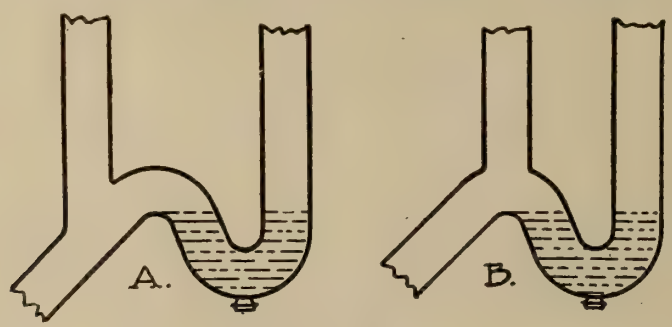

FIG. 48.

The action of siphonage and back pressure on siphonable traps may be overcome by back-venting the traps; thereby providing for a continuous current of air throughout the entire system, which will prevent the formation of the vacuum that causes siphonage, and will relieve the back pressure on the water seal.

Non-siphonable traps will be made the subject of the next article.

Get rid of all hot weather goods you can this month. The warm weather will soon be over and you need the space for Fall goods.

PLUMBING INSPECTION AT OTTAWA.

Editor Hardware and Metal.

"Subscriber," in your issue of Aug. 25, exhibited a force which would be entirely commendable were it accompanied by the virtue of courage or just a fraction of reason, in all points save one; it was a re-echo of the echo of the convention. Were it a truth that association was the invention only of one mind the local probabilities were, that no convention would be held, the national association thereby would have been repudiated, its value as an educational factor discounted, and the restrictive lines upon which the goods travel from the manufacturer and supply house to the master plumber withdrawn. The merchant and the consumer would then conflict, credits would depreciate, business would be wholly demoralized, shops would be vacated, and depression rampant. But because association is responsible for the inception and extension of commercialism it becomes a vitality which every human being knowingly, or unknowingly gives support to. This knowledge animated the founders of the National Association of Master Plumbers; the remembrance of this animated the delegates to the recent convention in Ottawa; they humbly regarded it their right and duty in the eye of the public to praise and defend the objects, which we stand for. To that action alone and to no one particular element are thanks due for the deepening and extension of those restrictive lines which, when properly respected, bring a security which could not legitimately otherwise be brought.

Under cover of anonymity, which, "Subscriber" uses, I am not able to get "a drop" on him. Recriminating letters are best answered, when written anonymously, by not replying to them. I take comfort from the fable which instructs us how the ass brayed at the lion, who swelled with indignation at the affront. He remembered himself saying, jeer away and be an ass still. But, sir, I will not act as rudely as the zoological king, my object in referring to his behavior was to show "Subscriber" that in hiding under the editorial mantle his letter forfeits that significance and value which he would have it deserve. Anonymity is the editorial form of charity; it covers much. One man will use it in doing a friendly act, another man will only use it in an unfriendly way. Of the two intentions, I give "Subscriber" credit for the former because he has given me an opening to pulverize the impression that he would have your readers keep.

As the purpose of the impression is to cast discredit on myself for a particular course of action, and as it was subsequently amply justified, it is now with no small degree of pleasure, more particularly as the work of the National Association will be reviewed, that I describe the events which led up to the division, referred to by "Subscriber." Up to the year 1900 the prospect of having the board of health insist on good plumbing, was beyond the vision of men who had been years in business, men whose character, position and ability had been used with persistent energy to improve the standard of quality and of effort in the installation of ducts, tubes and fittings, used for the reception, conveyance and disposition of nature's waste, which is now known by the term sanitary engineering. Credit is due these men who entirely free from ostentation or bluster, kept continually before the Ottawa public the immense advantage the city would have, if it established a rule for the guidance of plumbers, this movement met with considerable hostile prejudice from those who earned handsome dividends by ownership of ill-equipped houses. They claimed with much zeal that it was entirely a selfish measure. They discerned the increased cost but not the improved conditions to themselves and society. The probability of increasing returns with increased investment was to them a myth, a phantom, and a delusion. Between purchasing power and selling power they saw no degree of relation. To-day if a landlord wants to sell or rent his property well he must spend money to make it suitable.

s hostile element, beyond showing that the movement was a real live one, little progress was made until an event occurred which at once stimulated public concern. In 1899 the Ottawa delegates to the Quebec convention received instructions to nominate Ottawa as a place to hold the fifth annual convention in 1900. The nomination was accepted and preparations were promptly made to celebrate it, it being foreseen by the local men that the prestige of the National Association meeting here would so command public attention that its work would be surveyed fairly and sympathetically by a progressive sentiment. This forecast proved correct. Forces at once gathered to destroy the opposition to the advancement of the board of health. What was impossible before the convention was quite easy after it. The widespread influence of the National Association had been reckoned with. It had shown on reasonable grounds that it had work second to none in importance, that it had to do it, because no other force was equal to it. It alone embraced and typified all the individual merits of the trade throughout the country. A composition of such a mixed character stamps the certainty that if it is not en-

tirely successful it will at least be a very formidable element to contend against.

This estimate is not one whit extravagant in view of the speed with which the proper functionaries got together, made specifications for plumbing and had them adopted by law in the city of Ottawa. Immediately trouble began. Either by the grace or apathy of the master plumbers the office of inspection was secured by the present incumbent. Aggressiveness, and no doubt persistent lobbying, won the day. He was not and is not regarded as a representative man. In all human endeavor it is admitted that an officer or public servant should have a proper respect for the factors he serves, and that the esteem and good will of all elements of society are necessary to make an officer popular. Can this officer boast of this pride?

Is he not, by providing plans and specifications for the plumbing, heating and ventilation of private dwellings and schools and supervising them, recreant to public trust? Is he not an unfair competitor to the architect with a bronzed face? One or two have endeavored to justify this by saying his time is his own after business. This is not disputed. The point is, should he be allowed to allow his private interests to interfere with his public duty? What say you to him enjoying membership in an industrial class, up to the time of the strike, a class whose interests are in direct touch with the master plumbers? He may enjoy the membership now. A sane officer would have freed himself from all entanglements, disarmed all prejudice and simply appealed for the sympathetic co-operation of the dominant factor. Instead of this he initiates a policy of bluff. Bluster and bunkum official threats are followed by abortive police court proceedings. In the light of this, does "Subscriber" suppose, unless the inspector alters his ways, that he should be favorably considered in any representations that may be made to the medical health officer or the board of health by the master plumbers of this city? Certainly no direct negotiation would be carried on with him unless he was duly accredited by the medical health officer in Toronto or elsewhere, the executive axe would have fallen, once it was found that an officer took private business that would interfere with his office.

To terminate this condition which was aptly described as intolerable, the association resolved to petition the board of health for the purpose of amending the by-law. This avenue presented the only chance of getting at the inspector. All concerned had paid dearly at one time or another for the drastic interpretation put by the inspector on the by-law, and all concerned were agreed that preparations should be made for his succession. The manner laid down was received with earnest opposition by a particular element. The proposition was not withdrawn, nor the opposition. Division developed and the petitioners went to pieces before the board of health. Looking back after mature reflection it will be admitted that the petition could not have been presented by abler hands. It was conceded with confidence that the petitioners would emerge triumphantly. Why, then, did they fail? Simply because they took the wrong means. Had they attacked the spirit in which the by-law is administered, the personator would have been down and out. There is a growing idea that all municipalities should have a master plumber on the board of health owing to the position he holds in the public eye. His expression would be cautious and his judgment would add value to the assembly.

I've got "Subscriber" going. Before he is gone, though, let me put this down. The officers or members of the National Association do not need the testimony of an anonymous writer as to their cause, character and ability. All progressive communities praise the first by adopting its teachings. The latter are soon proved by a little experience in business.

Yours truly,

H. A. KNOX, Ottawa.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 7, 1906.

A lively demand for every class of finishing goods is shown this week, and prices continue very steady.

The scarcity in iron pipe, noted in our last issue, is still keenly felt. The local pipe mills find it extremely difficult to deliver certain sizes, and it is reported that western producers are in the same box. Meantime, quotations are firmer than ever, on the strength of a short supply, but no actual advance has been made.

RANGE BOILERS — Market conditions are unchanged since our last report. We are still quoting: Iron clad 30 gallon, $5; 40 gallon, $6.50 net list. Copper 30 gallon, $25; 35 gallon, $29.50; 40 gallon, $32 net.

LEAD PIPE—No changes in price have occurred, though our quotations are firmer. Discount remains as follows: 15 per cent., f. o. b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b., London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—Business is keeping up to the normal volume. We are still quoting: Discounts on all sizes of nipples up to 6 inch, 67½ to 70 per cent.

IRON PIPE—It is said that both the Canadian producers of pipe are short in their deliveries, especially in certain sizes. We are still quoting: Standard pipe in lots of 100 ft., regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27; 2 inches, $36.50; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS — The market shows no change, either in general conditions or price. We still quote: Standard soil pipe, 50 p.c. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—We are quoting: Bar solder, half-and-half, guaranteed, 24c.; No. 2, wiping solder, 21c.

ENAMELWARE — Business continues good, large orders being constantly received. We are still quoting as follows: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.50, special $17.15; plate E35, 5 feet, 1st quantity, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.: special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, September 7, 1906.

Soil pipe has taken a drop this week, the discounts being increased from 60 per cent. to 65 and 10 per cent. for medium and heavy, and 60 per cent. on light pipe and fittings. There is no apparent warrant for such a change except the ordinary reason of competition. Solder remains the same as last week, and lead and iron pipe without any change. The demand for all lines of finishing goods is still good, and for steam and hot water heating is heavy.

LEAD PIPE—Prices keep firm, but without change. Pig lead still holds high. Lead pipe, 8c., discount 15 per cent.

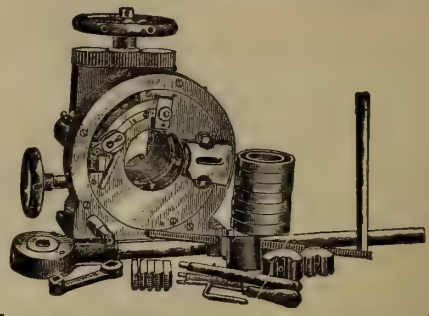
SOIL PIPE AND FITTINGS—An increased discount has been given on soil pipe and fittings. We quote: Medium and extra heavy pipe and fittings, 65 and 10 per cent. off; light pipe and fittings, 60 per cent. off: 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—Prices continue without change. We quote: Black, 1-in. pipe, $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS — We quote as follows: Cast iron elbows, tees, crosses, etc., 67 1-2 per cent.: cast iron plugs and bushings, 67 1-2 per cent.;

flange unions, 65 per cent.; nipples, 75 and 5 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 and 10 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 65 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 1-2 per cent.; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallon, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.



RADIATORS—Business is particularly good. Prices remain the same. Our quotations are as follows: Hot water, 50 and 2½ per cent.; steam, 50 and 5 per cent.; wall radiators, 50 per cent.

SOLDER—Prices are without change, and firm at last quotations. We quote: Bar solder, half-and-half, guaranteed, 26c.; wiping, 24c.

ENAMELWARE— The demand is heavy, with no price changes whatever. We quote: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $14.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.90. Fittings extra.

Four of the Winnipeg striking plumbers were fined on Tuesday for besetting. Magistrate Daly imposed fines of five dollars and costs, and told the prisoners that, while they had a right to go on strike, they had no right to try to prevent other men working.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

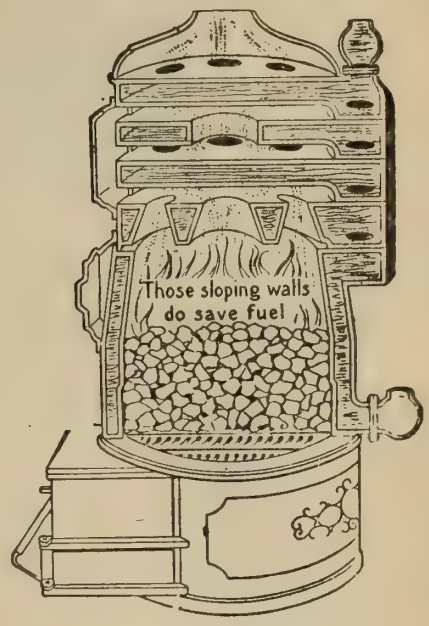
"I got four lower bids, —but I've put in an Oxford"—

Friend of ours was looking over a new house on Spadina Road, in Toronto, the other day.



The owner spoke of the heating system he'd put in as one of the big inducements to buy the house,—Oxford Boiler, he said. Man wanted to know what difference that made. Owner told him he'd used the Oxford in his own house three winters; said that when he invited tenders on this new house that he got four lower bids than the Oxford dealer made, but the Oxford man got the job because it made the owner surer he'd get his price for the house.

That's a fact. It's a fact worth your thinking over. Think over this, too,—we paved the way for that dealer to land that business,—our selling-help for live dealers is for that special purpose.

When a boiler has that kind of a reputation, doesn't it seem worth while learning what there is in it for YOU?

We have time to answer your letter asking questions about

The Heating System with Twelve Betterments

UNITED BRASS GOODS HAVE FEATURES ALL THEIR OWN.

UNITED

Patented Fuller work has a unique eccentric which gives only positive back and forth motion with no side swing. **UNITED** Fuller work has full-sized waterway and special composition balls that will stand hot water without swelling. **UNITED** Fuller work is the only Fuller work that has no trap beneath the stem to catch and hold water after the piece is turned off.

THE UNITED

Fuller Bibb shown in the cut is the Patent Fuller Plain Bibb with Screw-on Tail, fitted with an Adjustable Set Screw Flange. The gentle taper of the tail is a **UNITED** feature. It permits the adjustment of the flange at any desired distance from the shoulder of the bibb, thus making a neat job no matter what the thickness of the sink back may be. **UNITED** compression work is also furnished with the Set Screw Flange.

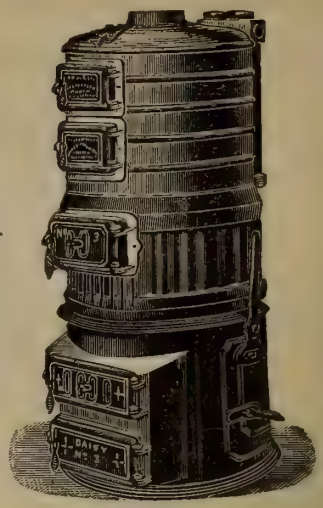
CLEVELAND, OHIO, U.S.A.

Do you want

— to sell your business ?
—to buy a business ?
—to employ a new clerk ?
—to secure a position ?
—to sell some store fixtures ?
—to buy some tinners' tools ?



the easiest way to satisfy your wants is to place a "want ad." in Hardware and Metal.

The cost is small, only 2c. per word for first insertion and one cent per word for subsequent insertions.

Some man in some part of Canada will be interested in your proposition.

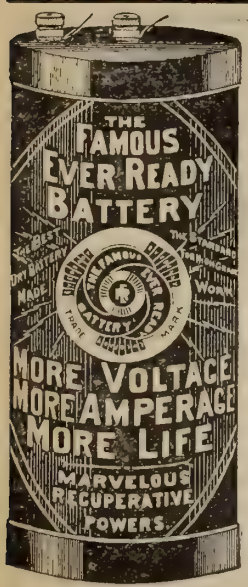
Hardware and Metal is the only medium that reaches the trade thoroughly from the Atlantic to the Pacific.

THE ORIGINAL

The Improved Daisy Hot-Water Boiler is the Adam of the industry. The others came in on the eve of the Daisy's success.

Imitations, etc., are never as good as originals, because they represent "follow-the-lead" methods, have no self-reliance.

Other boiler-makers have attempted to get the "Daisy" ECONOMY trait, but so far they haven't been able to get within a mile of it, though they have done lots of trying and shown lots of things—ON PAPER.



Let Dealers be Wise and Order the "Daisy"

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

Hardware and Plumber—

We have pumps suitable to any demand made upon you by most exacting customers.

Our pumps will do anything that a pump can do, and we will be pleased to give the benefit of many years' experience to any one having pump troubles.

McDougall Pumps are Standard Pumps, and with us it is quality first, last and always, while we ask just as little money as we can get along with.

We have a few catalogues for distribution

The R. McDougall Co., Limited

GALT, - CANADA

STAY-ON
Horse Blankets

"Imperial Crown" Brand

The difficulty with most Horse Blankets is that no matter how you attach them to the horse, they will work off. In the special make of our **STAY-ON BLANKETS** this difficulty is overcome. We have spent labor and money to perfect all kinds of horse clothing, and we are pleased to demonstrate to all the advantages derived from the use of our specialties. You pay no more for our goods than you do for inferior qualities.

TO THE MAN

building up a hardware business on quality factors an article so indicative of quality as

HUDSON PATTERN APPLE PARER

appeals in a peculiarly striking way.

This man finds in this parer what his customers come to his store to get—value for the price paid.

To say that the "HUDSON" PARER has no equal is to tell the truth.

The **"Stay-on"** blankets have other advantages. They are shaped to fit the horse, are provided with straps and snaps, and do not require surcingles.

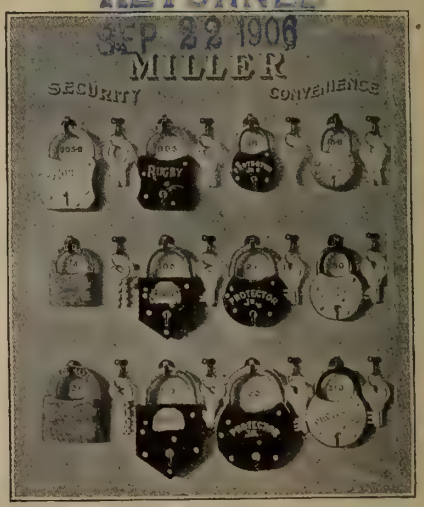
They are made in all the usual materials—Duck, Dutch Kersey and Jute.

Our full line is described in our **"Sporting and Fall Goods"** catalog.

F.&W.

Padlocks are good sellers in the Fall of the year.

At that season people who have things to lock up are getting them under cover for the winter.



Variety and quality in your stock of padlocks will enable you to do a large trade in that line.

Padlock assortments on cards allow you to keep a variety of padlocks without buying a large quantity.

Buy padlock assortments, and buy the **"Miller"** for quality and saleability.

Ask our travellers for prices or write direct.

The most Scientific Burner on the market today. Nothing to equal it in efficiency or appearance.

AN ORNAMENT IN THE MOST ARTISTIC HOME

Leather Packing or Gasket makes it absolutely impossible for any leakage of gas from the needle valve adjustment. Cannot light back into the bunsen or puff out when lit. The accompanying detailed sketch cannot fail to convince the most skeptical of its many advantages over every other burner on the market.

Manufactured expressly for and controlled in Canada, Great Britain and United States by

A Building Necessity

These are the names that have been made synonymous with the

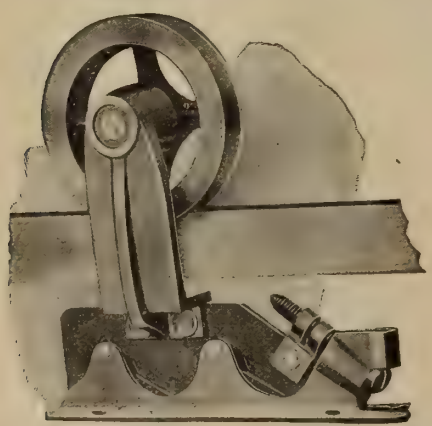
AEOLIAN VENTILATOR

We are the manufacturers of it and control the patents.

We have placed it on some of the finest buildings in the Dominion.

It is a scientific fact that no modern buildings can afford to neglect sanitation.

We are contractors and sanitary experts. Our ventilator is guaranteed and is placed in position to suit the building as to quality and size.



ONE TESTIMONY:

MONTREAL, June 12th, 1903.
Canadian Pacific Railway Company.
Messrs. J. W. HARRIS CO., LIMITED,
7 St. Elizabeth St., Montreal, Que.

Gentlemen—Answering yours of June 1st, I am not personally familiar with the merits of the "AEOLIAN" Ventilators, but our Assistant Engineer, Mr. F. Crossley, reports that the Ventilators of this type, manufactured by you and used by this Company at the Place Viger Hotel, Chateau Frontenac, Windsor Street Station, and elsewhere, have proved satisfactory. Yours truly,

E. H. MCHENRY, Chief Engineer.

Would You Save A Cent?

BUSINESS SYSTEMS LIMITED — SYSTEM THE SECRET OF SUCCESS — TORONTO.

It seems hardly worth the effort to save a single cent—but where do the pennies go?

Business is a serious matter.

Have you a system in your office department that shows you exactly what a certain nut or bolt has been costing you for the past five years, with all the details of every order.

■ ■ ■ ■ ■ ■

When Brown & Co.'s representative comes in, you are not in a position to buy right unless you know what you bought at last time.

And you are not in a position to sell to advantage unless your stock records will show you in a second what you have to offer.

Detailed, mechanical information is an aid to both buying and selling.

Business Systems give the maximum of information with the minimum of labor.

Business Systems keep you in close touch with every active detail of your business.

Business Systems are more economical in the first place and as the entries are made, your books show you what you want to know.

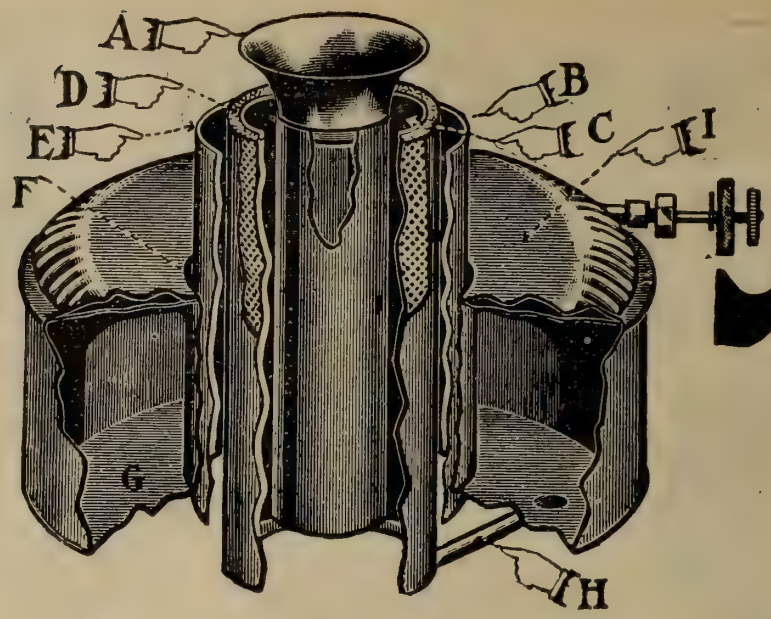
MIGHT and RIGHT



Want ads appearing between the covers of

Hardware and Metal

are read by the RIGHT people and ACTED on.

Want to sell. Want to buy. It makes no difference which. An expenditure of 25 or 50 cents in **Hardware and Metal** want columns will produce the desired result.

Rates 2c. per word, first insertion.
" 1c. " each subsequent insertion.

Our Safety Burner

Look at It

A—Flame spreader. B—Air space outside of Wick Tube. C—Air space inside of Wick Tube. D—Wick. E—Outside Casing to Burner. F—Air space between Fount and Outer Casing. G—Fount for Oil, entirely separate from Burner. H—Feed Pipe conducting Oil from Fount to Burner. I—Shield resting on top of Fount with air space underneath.

The Soul of the Heater

This **Grand Safety Burner** is what makes the Aluminum Oil Heater the **only best** and absolutely safe Oil Heater in the world. Look at it. Note the generous air passages which insure complete combustion, and therefore thorough radiation.

Look at it. Notice the solid flame spreader. There are no perforations to clog up with sticky substances. It cannot smell; it cannot smoke; it cannot explode. Remember that no other oil heater has this Grand Safety Burner. Dare you sell your Trade any other?

Aluminum Oil Heaters

Sell on sight, stay sold, and bring new customers.

Aluminum Oil Heaters work satisfactorily from the beginning—they are made perfect before we ship them from the factory. If you buy any other kind you will be sorry--and your competitor will get trade.

Our Smokeless Device on Aluminum Oil Heaters is exclusively our own. It is a perfect device, easy, simple, absolute in operation.

Anyone can take out the Wick and re-wick an Aluminum Oil Heater in a minute—you won't have to send a man out every few days to keep the Aluminum Oil Heater in order as you do with other kinds of Oil Heaters.

The Aluminum is the handsomest Oil Heater on the market. It is a finished product—but send for descriptive book. Better yet send an order to-day for Aluminum Oil Heaters. Put them in before the other fellow has a chance. The price is right.

Lewis Bros., Ltd.,

Montreal Toronto Ottawa Winnipeg Vancouver Calgary

Emerson & Fisher, Ltd., St. John, N.B.

It is a fact

that the majority of opinions we receive concerning

THE EMPIRE QUEEN RANGE

coincide with our own opinion. "A good baker," "a perfect cooking and heating stove," "an excellent cooking stove," "just the range to bake with," "I like it, for it is a satisfactory cooker"—this is the tone of the testimonials. Could a dealer ponder over these extracts without feeling that there must be something meritorious about **THE EMPIRE QUEEN RANGE,** something about it that makes a buyer say, "I'll take this range?

We Will Send a Booklet to any Dealer

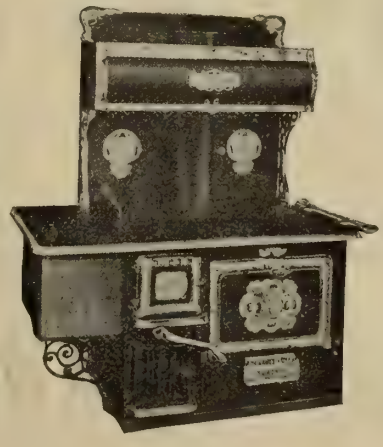
ARK-EL-ITE
TRADE MARK

IT COMPELS BUSINESS!

ARK-EL-ITE ASBESTOS STOVE LINING is a "can't-be-done-without" article.

One of its uses is as a fire-mortar for laying firebrick in boiler furnaces.

Another use is for lining and repairing stoves and ranges.



6-lb. packages and bulk.
Your Order handled with Rapidity.

THE FRANCIS-FROST Co. LIMITED
223 QUEEN ST. EAST
TORONTO, - - - CANADA

Our idea of a square deal is just this:

Design a range that will do its work better than any range of its kind.
Build that range half as good again as any other range that fetches the same price.
Work harder to sell that range **FOR** the dealer as we work to sell it to him.

Here's how it works in your case:

With an Oxford Chancellor Steel Plate Range on your floor you are fixed for any trade that comes your way.

Once it's there, we will take all the trouble and spend all the money that's needed to send the trade your way.

And we'll keep the Oxford Chancellor, year in and year out, enough better in value, looks and quality to hold the trade we get for you.

If you think that's only talk, write and tell us so.

114

Series No. 518

"FAMOUS" AIR-TIGHT HEATERS

Made in three series, Nos. 185, 518 and 510

"Famous" Air-tight Heaters are made from only the best grades of planished iron, and are carefully put together.

Have anti-rust coated, polished sheet-iron body, heavy sheet steel linings, and cast-iron pipe collar

The screw-damper for opening or checking the draft is perfectly air-tight when closed, and will shut the stove up so tight that fire can be retained for hours without going out.

These stoves are made in very small and very large sizes, so that a size can be had to suit any sized place.

As shown by the accompanying cut, series 518, have highly polished nickel rails and cast-iron tops, while all lines have ornamental urns.

"Famous" Air-tight Heaters are handsome enough for any house

"EVERYTHING FOR THE TINSHOP"

Jottings From a Hardware Dealer's Diary*

MARCH 3—If there is one thing that impresses me it is that I can sell anything that has selling strength in it

MARCH 11—This day I became the agent for **Maximum Light Glass**.

MARCH 12—Read with delight Prof. Schmidt's article on "The Danger of Store Darkness."

MARCH 18 — Profits on **Maximum Light Glass** $50.

MARCH 26 — Convinced that while Rome wasn't built in a day, possible to make dwellings light in a day.

MARCH 30 — Recived three compliments for my M. L. window display and booked five orders.

You Can't Lose by "Trying"

Do you think there is profit selling wire fencing? Just figure for a moment how expensive timber is getting then you will see why so many gardeners, farmers, etc., use wire fencing and why the number will always be increasing.

If a townsman wishes to put

DILLON HINGE STAY FENCE

around his lawn the order would be just right for you. The profit is there without trouble—ideal conditions for the man selling "DILLON" Wire Fencing in conjunction with general hardware.

Let us send you prices.

An Exhibition Bargain

All the cases which we built for our exhibit at Toronto Exhibition have been sold with the exception of the one illustrated herewith.

This case is 11 feet long, 8 feet 6 inches high and 12 inches from front to back, fitted with 243 Bennet Steel Shelf Boxes. Size as follows: 20 boxes 3x3, 70 boxes, 6x3, 72 boxes 5x3, 12 boxes 10x3, 12 boxes 15x3, 4 boxes 15x6, 6 boxes 10x6, 35 boxes 6x6, 12 boxes 5x6.

This assortment of boxes has been found very practical and convenient for the Hardware trade.

All the wood in this case is oak, green oak finish. The pulls are nickel. All the boxes are interchangeable thus four boxes 3x3 could be put in place of one 6x6.

There is a very handsome cornice on this case about 8 inches high.

The net price for this case is $140.00, F.O.B., Toronto.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers' Association of Western Canada:

President—A. J. Falconer, Deloraine.
First Vice-President—J. B Curran, Brandon.
Second Vice-President—W. M. Gordon, Winnipeg.
Secretary-Treasurer—J. E. McRobie, Winnipeg.
Executive—Alberta, A. E. Clements, Olds; C. F. Comer, Calgary; A. R. Auger, Okotoks.
Manitoba—H. S. Price, Boissevain; A. P. Macdonald, Winnipeg; O. Gilmer. Winnipeg.
Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.
Officers Western Board (elected by general merchants and hardwaremen in joint session): President, W. G. McLaren, Souris, Man; vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; secretary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor J. A. Lindsay, Winnipeg. Man
Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association:

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G. Scott, Mount Forest.
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto.
Secretary—Weston Wrigley, 10 Front St. East, Toronto.
Executive Committee—The officers and J. W. Peart, St. Mary's; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.
Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

A VOTE ON CREDIT.

In order to ascertain the views of the western hardware trade on the proposal to close all books on November 1 and refuse credit absolutely until April 1, Secretary J. E McRobie sent out, a short time ago, a circular letter to all the members of the Western Retail Hardware Association The letter was as follows:

Curtailment of Credit.

Dear Sir,—The curtailment of the present system is a question that you no doubt are anxious to see accomplished. It has been discussed at association meetings on several occasions, but owing to the fact that many of the members were absent, it was thought inadvisable to adopt any measure without an expression from the entire membership.

To allow of the association arriving at a solution, I would ask you to answer the following questions and return same to me at once.

J. E. McROBIE, Sec.

(First.) Are yu in favor of the curtailment of the credit system?

(Second.) If so, will you promise to close your books and keep them closed from November 15 to April 1, when advised to do so by the secretary of the association?

Should Act as a Unit.

Replies have been received from a good proportion of the association members, but it was surely not too much to expect that every hardwareman receiving this ballot would take the trouble to answer the questions asked and forward it to the secretary. It is to be hoped that every hardwareman who has neglected the matter will attend to it at once.

A large number of replies have been received and it is possible to gauge pretty accurately the sentiment of the western hardware dealers. To the first question there is only one reply possible from most dealers. All are anxious to curtail the credit system if they can discover a feasible plan. A few expressed themselves in favor of a strictly cash system but the majority seem to recognize that this is not practicable in the west and want to consider some plan for the regulation of an evil which cannot be entirely abolished.

The answer to question No 2 was practically the same in all cases "I am in favor of this plan if my opposition is willing to agree to it I can't do it alone."

One Dealers' Experience.

One Manitoba dealer made some interesting comments on the back of his ballot.

"I started five years ago," said he, "to curtail the credit system and closed my books as soon as a customer was threshed out, and I kept them closed until March 1. Two years later I closed all accounts on November 1 and kept my books closed until April 1. I find that the plan has worked well and the only thing required was a stiff upper lip during the first winter—the next season customers expected it."

"So far as I could see at our meeting a year ago, the merchants present seemed to be afraid of starting to curtail the credit. Although in a town within two hours' drive from Brandon (where dealers were giving credit) I experienced very little trouble in putting my system in operation. The customers who did the most kicking were those to whom I would have lost money if I had kept on giving them unlimited credit."

From the replies received it is evident that the hardware dealers in many western towns are anxious to give the no credit scheme a trial this Winter—that is each hardwareman is willing "if his opposition will do the same." Now Mr. McRobie cannot possibly undertake to visit all these towns in order to perfect a no-credit organization; the dealers must do this for themselves. What town will be the first.

AN ORGANIZER WANTED.

There is a splendid opportunity open for some one in connection with the position of organizer of the Ontario association. With the association getting down to definite work and with something tangible to offer to members, it should require very little effort to enroll each one in the trade.

For a retail hardware dealer who has disposed of his business or a traveler who desires an opportunity of getting in touch with the trade throughout the province the opening is an exceptionally good one.

Applications should be sent at once to the secretary, 10 Front street east, Toronto, from whom additional information can be obtained.

MUTUAL INSURANCE,

The announcement that the Canadian Manufacturers' Association is to launch two mutual insurance companies, having already secured applications for policies amounting to about two and one-half millions, is interesting in connection with the work now being done by the mutual insurance committee of the Ontario association. If the manufacturers succeed in inducing the Dominion Government to pull down some of the legal bars erected by the agents of the old line stock companies, it will also have an important bearing on the action proposed to be taken by the Ontario association.

Every member of the Ontario association will receive during the coming week a letter from J. Walton Peart, of the St. Marys Hardware Company, St. Marys, Ont., chairman of the mutual insurance committee, asking for replies on the following questions:

What insurance do you carry on (a) buildings, $..... (b) stock, $.....?

What are stock company rates (a) buildings, ... p.c. (b) stock, ...p.c.

In the event of our organizing for mutual insurance, would you insure to the limit of policy ($3,000)? If not, state what amount you would carry with the association.

In the event of an arrangement being made on a preferential basis with an existing company, upon the lines outlined at convention, would you be inclined to place your insurance up to the limit of $10,000 with one company?

Have you any general suggestions to make regarding fire insurance?

While only members of the association will be entitled to enjoy the rebates on insurance secured through mutual co-operation on the plan proposed by the association, there are undoubtedly many firms which will enroll later on. Non-members, therefore, who desire to make a saving on their insurance and keep in touch with the work of the mutual insurance committee are invited to forward to Mr. Peart their replies to the above questions at the earliest possible date. By so doing they will aid materially in the important investigations now being made by the committee.

IMPROVEMENTS ADVOCATED IN RANGES

A Collection of Suggestions Recently Made by Hardware Dealers in the United States is Given in the Following Paragraphs

"I believe that steel ranges ought to have larger bodies and fire boxes. Steel ranges, as they are constructed at the present time, rust out too easily."

"The parts of the steel range most easily damaged are around the bottom. These should be made of heavy steel."

"I would suggest a greater difference in price between a four hole and a six hole grade range."

"The ovens warp considerably, and the tops likewise. If they are in a damp place they will rust very easily. The cheap imitation steel ranges should be eliminated, and ranges should be constructed out of the best possible material."

"More care in the construction of steel ranges should be used. The castings should fit better, and the inspection by the so-called inspectors should be more rigid. I never put out a range unless I go over it and see that all defective parts, if there are any, are made right."

"The fire box will need attention first in the matter of repairs, and then perhaps the grate. Repairs, however, depend altogether upon the user. Sometimes the top plates will warp and sometimes the oven door. The back flues very often give out at the bottom, but this fault has been overcome by reliable manufacturers, who have substituted cast flues."

"I suggest that all bottom flue strips and back flues be constructed of cast iron in addition to the parts usually so. The common fault of the steel range is its inability to stand the use of soft coal more than eight or ten years. In fact, steel ranges wear badly in all their parts with the use of soft coal. The bottom and back flues are not durable. They stand better with hard coal."

"Reduce the extreme ornamentation, improve the fire doors and make the duplex grates fit the forms better."

"The commonest fault in ordinary range construction is the fire box linings and griddles. The ordinary grates, especially for wood, are too open, and the grates do not fit the forms. Too much allowance is made in the tops for expansion and contraction. We have very little trouble with griddles cracking from heat, except where water is spilled on them when they are at a red heat."

"The balancing apparatus for oven doors and the dampers get out of order oftener than any of the parts in my experience."

"The most common fault is the buckling of oven bottoms and the body wearing away. The parts to be improved are the outside of the grate and the covers over the fire. The body on the majority of ranges is too light and the rust, steam or condensation on the concealed side of the body, plays them out very rapidly. The old style iron (sheet) is much preferred to the steel."

"Make all reservoirs interchangeable, detachable, and either right or left end. Do away with the cipher numbers upon steel ranges and mark their size, name and date of make plainly upon them. This would expediate the getting of repairs. Perfect the feed door to the fire box, and the door to the ash pit, so that they could be opened without spilling ashes upon the floor. There is not a stove on earth that will not spill ashes under these circumstances, made at the present time. Use the very best of Russia iron in their construction, in place of the common one pass steel japanned as at present in so many cases used."

"The fire box is the commonest fault. Too small for size of range. Not shaped rightly. They are frequently "V" shaped, and the narrowest part of the fire box is the lowest. Build a fire in it. Put small pieces on the bottom. Then put the larger wood on top in the regular order. When you have enough, start your fire. Go to it in ten minutes, and the lower, smaller fire is gone, and the larger pieces of wood are lodged half way from the bottom, and will not burn because they are suspended in the middle of the "V" shaped fire box. If you were to turn the fire box upside down the condition would be ideal."

"The commonest fault of steel ranges is the rolling top warming closets. After they have been in use three or four years, there is a matter which collects on the top, inside of the closet, which can not be removed without taking the closet apart. When the roll is down, you can not get into it, and when it is up, the roll covers up the deposit so that it can not be reached. Everything put in the warming closets to be kept warm is soon covered by small pieces of this matter, which fall from the top, loosened by the jar of the rolling cover when the latter is let down."

"In shipping, the reservoir bracket, and the bottom rim of the body, the castings lying loose in the oven in case the range is turned partially, get damaged. The reservoir brackets are frequently broken because they are exposed in shipping, and they are very thin. The reservoir bracket could easily be protected if manufacturers would put a crate on that would-be square. That is, put the bottom strip of the crate so as to be long enough to extend out flush with the end of the reservoir bracket, and then have the upright pieces come up on the back and side of the rest bracket. This would protect it, and then when a truck is shoved underneath it and it is stood on end, the crate would be there to stand the strain, and not the reservoir bracket."

When of a capacity exceeding five gallons and not exceeding ten gallons, a fee of 30 cents each.

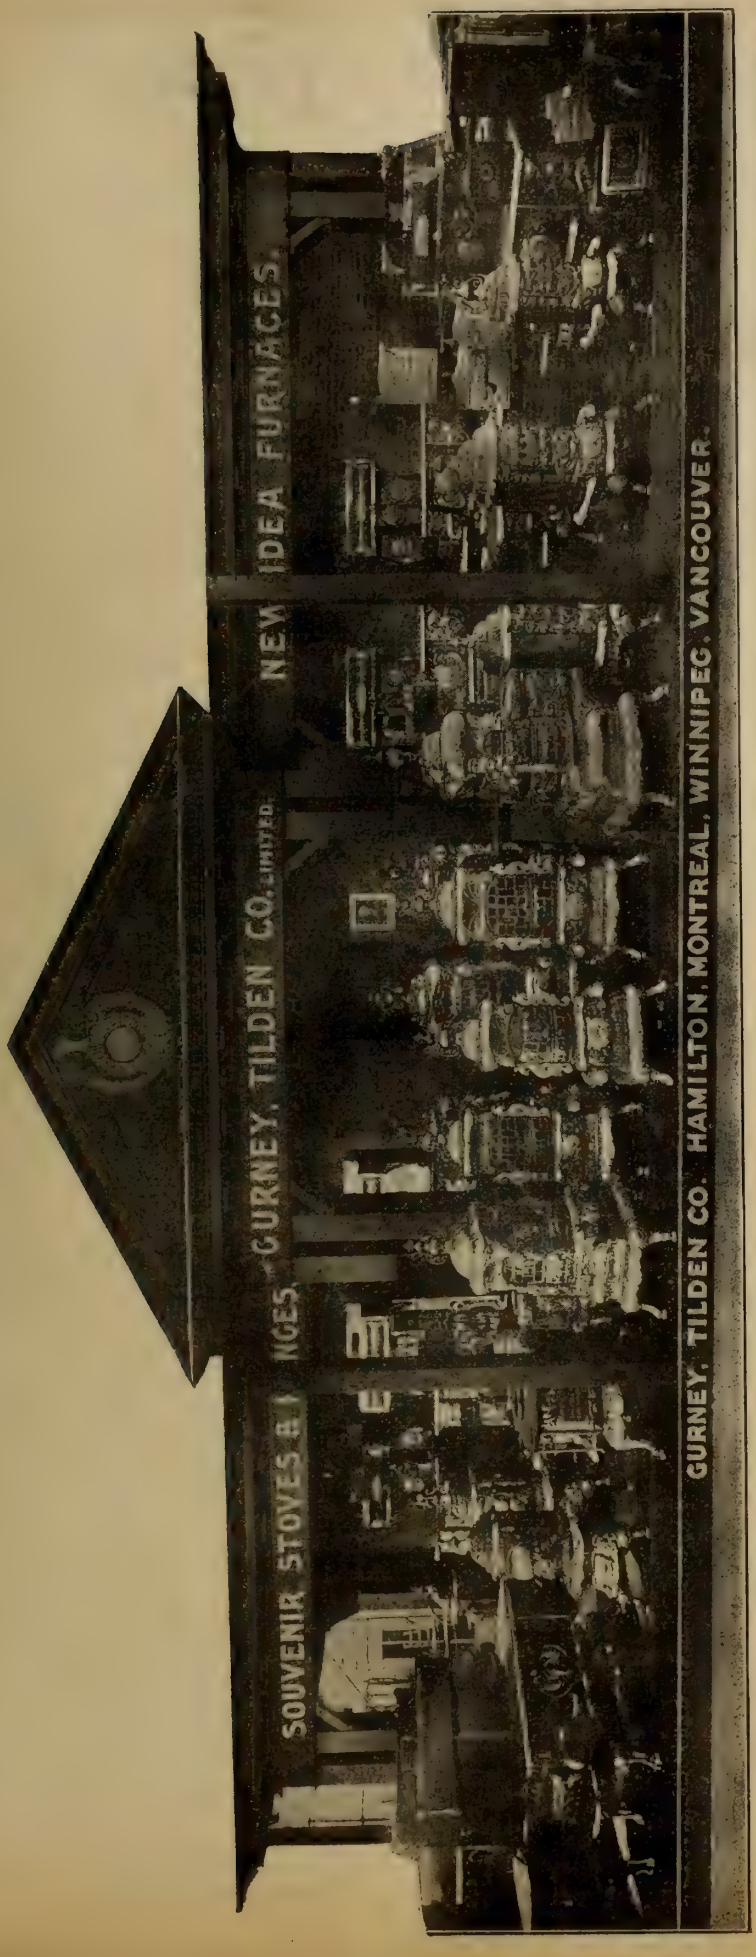
When of a capacity exceeding 10 gallons, a fee of 50 cents each.

But in order to meet the conditions imposed by the new act, and for the purpose of bringing about an inspection of the old cans in use during the three months' grace extended to their owners under the amended law, the fees until October 13 next will be one-half those above given. After the 13th day of October the fees as above will be exacted for the inspection of old cans as well as of new cans, and will be the fees there after charged on inspection of any can old or new. Manufacturers of cans will be wise to take advantage of the reduced rates of inspection. The Inland Revenue Department will afford facility for verification of milk cans, and will, if necessary to insure prompt inspection, strengthen the staff of officials, especially in Toronto and Montreal.

STOVE SELLING SUGGESTIONS.

Are you ready for an aggressive stove and furnace selling campaign during the Fall? If so, start now by preparing to let your customers know it by a series of "talking points" advertisements in your local paper backed up by one or two original and well thought out window displays. If you are not ready it's time to get ready—send in your stocking up order now.

When a customer comes several miles to buy a stove he wants to do business with a salesman who knows all about the stove he is selling, and one who can speedily make the necessary repairs if it doesn't work properly.



Some hardwaremen have an idea that the furnace business is beyond them — something that no one but an expert can touch. It may have been so in the past but it is not so now. There are manufacturers who will gladly tell anything you want to know about any possible job on which you may want to figure if you will send them the plans and specifications of the house, and also send the plant all ready to install, with pipes cut just the right length, so that any man with a knowledge of tools can install the plant properly.

The best time to sell furnaces is when buildings are being planned and erected. Study the catalogues of the different manufacturers and get after everyone who is building in your town. And when the building is completed get after the new occupant for an order for a new stove or range.

Remind your townspeople that if they haven't had their furnace repairs made they had better look after it before the middle of September. When they want a fire they don't want to wait a few days to get their rusty pipes renewed.

Every dealer should have a large supply of catalogues on hand, and read them carefully. Send for copies of the catalogues of manufacturers from whom you have not bought goods as yet. It will be of advantage to you to know all you can about competitive goods, and perhaps you may find some good points not possessed by the lines you carry.

Make certain that every customer who buys an oil or gasoline stove from you thoroughly understands how to handle it. No stove is proof against ignorance, so protect yourself by giving ample directions when you make the sale.

Canadian National Exhibition—Exhibit of Gurney-Tilden Company

GURNEY-TILDEN'S EXHIBIT.

For architectural effect no exhibit at the Toronto Exhibition excelled the display made in the Stove Section of the Process Building by the Gurney-Tilden Co., Hamilton. The beautiful permanent structure erected opposite the north entrance to the building was admirably suited to the purpose of displaying the well-known Souvenir line of ranges and New Idea furnaces. The blending of the woods and general effect of the dark background to the brightness of the stoves and ranges on display was excellent, and could hardly be improved upon. Solid and substantial, the structure reflected the widely recognized strength and solidity of the Gurney-Tilden Co., and its line of heating goods.

The Gurney-Tilden Co.'s popular staff of traveling salesmen were on hand to explain the old and new features which make the Souvenir line so popular with housekeepers who know the goods. As explained by one of the salesmen, the "Souvenir is the only Canadian range having a thoroughly aerated oven. The air being constantly changed in the oven produces wholesome cooked food with less fuel than with the old style air-tight or supposed ventilated oven. This feature is carried through the entire Souvenir line, which comprises a full line of cast iron ranges known to the trade as the Domestic and Champion Souvenir ranges, and in the steel line as the Royal Souvenir Steel Range, all being fitted with grates which are drawn out without removing the bolt, interlocked lined centres and patent rolling dampers."

The Souvenir base burner is an extremely handsome heater in appearance and has many practical points which puts it far in advance of anything in its class, such as draw-out fire pots, feed cylinders and grates, all being removable without the aid of a mechanic or having to chisel out bolts.

A few of the points which place the "New Idea" line of furnaces in the front rank are fire pots being cast in one piece with heavy wings or flanges cast along the sides, giving the fire pot the radiating power of two ordinary ones and making it almost indestructable. They are also fitted with the celebrated New Idea draw-out grates. The heating surfaces are large and the furnace being low down can be used in almost any cellar. It also has the only grate on a warm air furnace in Canada that will take the ashes away from the fire pot without disturbing the centre.

As can be seen from the photo reproduction here, the Gurney-Tilden Co. manufacture a complete line of heating and cooking stoves and ranges. In addition to this the registers manufactured by them are now known among builders and householders in a very favorable way not only from the fact that the heat can be so easily regulated from the minimum to the maximum quantity, but also from the appearance of the registers, which are really an ornament. They are made in the coppered, nickel, and black styles, in a variety of designs so that a selection can be made to suit any person. The ease with which they are regulated is also a feature in these registers. No pounding or straining is necessary, the simple mechanism being responsive to a very light touch.

EFFECTIVE ADVERTISING

A department devoted to the improvement of Retail Advertising. The editor of this department will be pleased to answer questions on advertising and review any advertisements submitted to him.

CATCHING FARMERS' TRADE.

"We are in search of some good schemes to catch more of the farmer trade. Have you any good schemes that would work well? If not, can you direct me to some one that has? * *"

We take it that our friend wants something like a "guessing contest" or prize affair of some sort, but these things do not seem to be altogether so well adapted to country trade as to city trade — where people are reminded of them more frequently, and where they can get to the store oftener than once in a week or a fortnight. And then such things are likely to be followed by a greater or less reaction or slump — something like the dull days that follow holidays.

More lasting benefit, it seems, would probably follow something in the nature of a standing, continuous inducement; something that would keep customers coming to the store every time they came to town. Why not arrange with a restaurant keeper to honor coupons issued by the store, in payment for meals? And with a feed stable for the feed and care of teams in the same way? A coupon good for a 25-cent meal or feed could be given with a purchase of say $2.50. The restaurant man would bring them to the store once a week and collect the price agreed upon, which should not be more than 16 2-3 cents or perhaps 15 cents.

"Rigs" which are hitched to public hitching rails are at the mercy of any predatory individual who cares to investigate their possible yield in the way of blankets, robes, whips, or more valuable articles — even the rig in its entirety sometimes—and it is certain that farmers would appreciate the offer of proper care and feed for their teams at no cost to themselves. So much for the horse feed idea. And for the man feed—a good many country folks do patronize city restaurants, but a good many more do not. These latter, though, would not be likely to "pass up" a meal if it were offered them free. And the restaurant man might possibly lose a few quarters through the merchant's offer, but he would inevitably gain more than enough of the 15 or 16 2-3 cent coupons to compensate him.

Perhaps it seems a little strong to suggest it, but the editor believes that the merchant could afford to issue two horse feed coupons and two restaurant coupons to every family party that came to his store from the country districts, irrespective of the amount of their purchases. Tell them you are doing it to show your appreciation of their good will. Don't require them to buy something every time they come in. When they do buy you'll get it all back, and they'll talk about your store, too, in a way that will do you good.—Advertising World.

* * *

Western hardware merchants prepare some very catchy ads.

The ad reproduced on this page is certainly catchy. On examination it proves to be good "all the way through."

The columnar style is always attractive in advertising. In Sandford's case it is made doubly so by a forceful heading and an appealing illustration.

The chief display line is in harmony with the arrangement scheme and "F. H. Sandford" fits in nicely at the close. The black face sub-headings are easily noticed and there is a sufficiency of detail.

This ad of Sandford's is a fit model for any other hardwareman.

CASH SALE REBATE PLAN.

A novel advertising plan has been adopted by Bard & Cheney, hardware merchants, Port Allegheny, Pa., they reporting that many new customers are being brought to their store as a result of the plan. One day in each month is "Cash Rebate Sale Day." The day chosen is that one the cash sales of which figure the nearest to the daily average cash sales for the month, and cannot of course be selected until the month is out and the returns of the business computed.

A sales slip is handed to each customer on which the date of sale, customer's name and address and particulars of the goods sold and their prices are given. A duplicate of each sales slip is kept by the firm.

The determination of the amount of rebate to customers is a matter which each merchant may decide for himself. He may choose to return half the money or a little more or less. Bard & Cheney make it 50 per cent., which, according to their experience with the plan, figures out about 2 per cent. on the total cash sales of the month. When the firm has determined on the premium date the fact is announced on large cards in the window and store and also in the store's advertisements in the local papers. One of these ads is reproduced herewith.

Make up fishing outfits to sell at a lump sum— not the cheap furnished lines, but good ones. Place a reel on a good rod, run in a good line and attach a sinker and troller. Then make up a small assortment of various sized hooks, trollers, sinkers, etc., and sell the whole outfit at a low price, allowing yourself a fair profit.

HARDWARE TRADE GOSSIP

Ontario.

Joseph Haggas advertises his foundry at Uxbridge for sale.

J. D. Naismith, Lotus, Ont., was a buyer in Toronto on Thursday.

A. Barber, blacksmith, St. Thomas, has sold out to Andre Monteith.

John Middlechurch, Ridgetown, manufacturer of rakes, suffered a loss by fire.

The Hensall Foundry & Manufacturing Company, Hensall, have obtained a charter.

The Globe Paint & Varnish Company, Toronto, have assigned to H. Barber & Company.

Cully & Breary, electrical supplymen, Hamilton, have taken J. M. Miller into partnership.

Geo. Clapperton, of Bennett & Wright, Toronto, spent a few days this week at Copper Cliff.

A. W. Humphries, Parkhill, is one of the delegates to the Methodist conference in Montreal this week.

Robt. Munro, general manager of the Canada Paint Company, was in Toronto on business on Thursday last.

W. Miller, of the Miller-Morse Hardware Company, Winnipeg, was in Toronto on business early in the week.

J. R. Hambly, Barrie, was a visitor in Toronto on Tuesday on his return from a few days rest across the line.

Geo. T. Pepall, of M. & L. Samuel, Benjamin & Co., Toronto, is on a holiday trip to the Maritime Provinces.

Samuels, Levine & Company, hardware and stove merchants, Toronto, have dissolved partnership, Mr. Samuels continuing.

J. Howard Sandham, of Sandham & Roberts, electrical and sporting goods dealers, St. Thomas, was a visitor in Toronto a few days ago. His firm has just completed installing an electric lighting system in the G.T.R. depot at Aylmer.

The Taylor-Forbes Co. have just completed an 180-foot extension to their big radiator building, this making their plant the largest under one roof in Canada. Another extension of 150 feet to their hardware molding shop has also been made, both extensions being necessary in order to keep pace with the rapidly increasing demand for the high grade goods made by the Taylor-Forbes Co., of Guelph.

Additional exhibition visitors to Toronto last week included : F. E. Hanna, Rosemount ; A. Hill, Everett ; C. C. Speight, Acton ; Henry Moss, Renfrew ; J. Pullan, Allandale ; A. B. Dowswell, Claremont ; J. E. Trelford, Markdale ; J. Wighton, Balsam ; J. A. St. John, Port Law ; J. A. McLean, Cannington ; J. M. Robertson, Tweed ; S. Bonathon, Newcastle ; A. A. Anderson, Sundridge ; Climo Bros., Cobourg ; Chantler Bros., Stroud ; W. W. Chown, Belleville ; J. A. Henderson, Brampton ; C. Shaw, Newburg; S. W. Moore, Churchill; L. P. Foucar, Tottenham ; E. W. Hay, Falkenburg.

Quebec.

The assets of Horace Talbut, tinsmith, of St. Joseph, have been sold.

Mr. McCrae, representing the American Lead Pencil Co., called on the Montreal trade this week.

The assets of Charles Gauthier, Montreal, steel range manufacturer, are advertised for sale by tender.

T. Gagnon, general merchant, of St. Stanislas, was among the hardwaremen noticed in Montreal this week.

J. R. Terrill, of Caverhill, Learmont & Co., is renewing old acquaintances at the Ottawa Exhibition this week.

Versailles & Freres, hardware dealers, Montreal, have dissolved partnership, Joseph Versailles continuing.

Robert Munro, managing director of the Canada Paint Company, Montreal, has returned from a brief tour of the west.

J. W. Leger, general merchant, of Vaudreuil, was a visitor at some of the Montreal hardware warehouses this week.

The Foreign Trading Company have opened offices at 17 St. John street, Montreal, under the management of W. M. Engel.

Albert Gauthier, plumber, Montreal, had a narrow escape from death this week as the result of an explosion of a gasoline stove.

"Tom" Wallace, representing the Toronto Pottery Company, called at the Montreal office of Hardware and Metal on Monday of this week.

H. W. Aird, secretary of the Canada Paint Co., has returned to his desk after a pleasant vacation spent at Prout's Neck, on the coast of Maine.

Mr. Lewthwaite, of Frothingham & Workman's staff, Montreal, is receiving congratulations on his marriage to the daughter of Rev. G. G. Huxtable, of Montreal.

W. Graham, hardware merchant, of Ottawa, was in Montreal last Saturday, and in company with G. N. Gray, of Lewis Bros., witnessed the lacrosse game between Capitals and Montreals.

E. F. Walter, of E. F. Walter & Co., manufacturers' agents, Montreal, sailed on the steamer Empress of Britain on a business trip, during which he will visit Germany, France, England, and other European markets.

Western Canada.

Milne Bros., of Mundare, Alta., are building a hardware store.

Morrison & Johnston, hardware and implements, Lacombe, Alta., have been burned out.

Fire destroyed the hardware store of N. Wilmer, Trail, B.C. The loss was $7,000, insurance $3,000.

Walter Jackson and brother, of Regina, have purchased a hardware business in Pincher Creek, Alta.

McCombs & Somersall will open a hardware store in Strathcona. Mr. Somersall has been a number of years in W. E. Ross' store in Strathcona, and Mr. McCombs comes from Rothwell, Man.

Frank R. Newman, who recently resigned the management of the Winnipeg branch of the Canadian Fairbanks Company to become head of Caverhill, Learmont & Company's western business, was presented by the staff of the Canadian Fairbanks Company with an address and a diamond ring. John E. Botterell, who has had charge of Caverhill, Learmont & Company's Vancouver house, will succeed Mr. Newman.

OUR EXHIBITION ISSUE.

J. Walton Peart, of the St. Marys Hardware, Limited, St. Marys, Ont., writes :

"I must compliment the MacLean Publishing Co. on the appearance of their last issue, not because of the large number of photos of handsome men (?) it contained, but because of the clearness of the cuts of exhibits at the Industrial. I think I never saw anything better or in fact quite so good as that plate of the Moffat Co.'s exhibit. Keep the change."

The publishers always appreciate words of commendation, although we like honest criticism even more, as it helps the editorial staff to improve or strengthen any part of the paper where subscribers can see opportunities for betterment which are not noticed by ourselves at short range.

In reference to the exhibition engravings, we would remind our readers that it was particularly difficult to procure satisfactory photos of many exhibits on account of the many windows and high lights in the buildings. This year we were more fortunate than on previous occasions, and we are pleased to know that our readers (many of whom cannot visit the exhibition) take such a keen interest in watching our efforts to reproduce in Hardware and Metal the many features of the exhibition of interest to the hardware and heating trades.

FURNACE BATTERY AND BLOWER SYSTEM.

The Pease-Waldon Co., of Winnipeg, have been awarded the contract for the installation of a blower system in the Methodist church in Regina. This contract calls for the installation of four of this company's largest "Economy" furnaces connected in a battery. In accordance with the specifications of Darling & Pearson, the architects, the vestry and church parlors will be heated with hot water, while the blower system will be used for heating the auditorium and basement. The Smith & Ferguson Co. will install the blower system, while Cook & Potts have the contract for the installation of the hot water heating system.

THE METAL SITUATION.

Import prices on metals of all kinds have been going up so rapidly during the past week, as to be almost bewildering, and it is almost a surety that jobbers will have to advance their quotations almost immediately.

Pig lead scored the biggest advance of the whole week, and, in fact, it has now reached the highest price recorded for some years past. Not only is this the case, but existing conditions point strongly to a continuance of the boom in this metal and leading dealers are looking for higher prices yet. At present, prospects seem very favorable for $5 lead.

Antimony, copper and spelter have all shown advances in first hands so that a much firmer tone has been created in jobbing ircles. Higher prices are momentarily expected.

Pig iron retains its firmness mentioned in preceding issues, and, if anything, the situation points even more to further upward moves in the near future. Many well-known grades are exceedingly scarce, while delivery before the close of navigation is in all cases difficult, and in some impossible.

Sheet metals are also scarce, and consequently firm. An advance covering all the leading makes of galvanized sheets has been confidently expected for some time back, but it has not yet been decided upon. Canada plates are in very active demand, at present, but dealers find an acute scarcity, when attempting to fill orders. Sheet lead, as might be expected from the condition of the primary market has advanced, a quarter cent having been added to quotations.

After a season in which metals have been remarkably strong, it will be of interest to compare prices now being quoted, with those of the corresponding date last year. It will be seen that, in nearly every case quotations are now very much higher. Under the circumstances it is not surprising that manufacturers have been regularly advancing the prices on their products. A comparative statement of prices follows:

	Sept. 15, 1905.	Sept. 15, 1906.
Copper	$ .17 1-2	$ .21
Ingot tin	.36	.44
Zinc spelter	.06 1-2	.06 3-4
Antimony	.16	.27
Pig lead	3.70	4.70
Pig Iron:—		
Londonderry	18.50	20.50
Carron, No. 1 ...	19.50	23.00
Carron, special ..	18.50	22.00
Summerlee, No. 1	18.50	22.75
Clarence, No. 1..	17.75	20.00
Clarence, No. 3 ..	17.25	19.65
Cleveland, No. 1..	17.50	20.00
Ferrona, No. 1 ..	18.00	19.50

These prices represent quotations on the Montreal metal market, at the dates mentioned.

INCREASED MANUFACTURING COSTS.

Recent advances in different products of hardware manufacturers have been accepted without much complaint by the trade, but in some quarters the reasons for the advances are not clearly understood. The past year has seen a steady rise in the costs of manufacture, the higher prices ruling for most metals being but an incident in the general movement towards higher prices.

"Both raw materials and labor are costing us considerably more than a year ago," said a manufacturer the other day in discussing the recent advances with Hardware and Metal. "We are paying $2 more for pig iron and 30c. for bars, and finding it very difficult to get the metal even at this advance. Malleable is costing over 2c. more than a year ago, steel 1c., coal 15c., coke from 75c. to $1, and lumber $2 per thousand, while labor is about twenty per cent. higher."

In view of this situation it is not surprising that quotations are being withdrawn or prices advanced. The manufacturer must cover himself from the effects of increased cost of manufacturing or excessive competition either by lessening the quality or increasing the price of the products of his factory.

Advanced prices chiefly affect the retail dealer as the last handler of the goods before being put into the hands of the consumer. Buyers often complain of having to pay more for goods than they paid for similar articles in previous years, although most customers do not have memories lasting longer than a few weeks. It is advisable, however, for every retailer to be able at all times to compare present costs therefore, for every retailer to be able to refer to previous quotations without too much loss of time.

TIN PLATE DIFFICULTY.

A difficulty which has been pretty largely overlooked in considering the possible manufacture of tin plate in this country, is that of securing tin plate bars, from which to roll the sheets that are to be tinned. The Canadian steel mills have been, and will be for some years, so busy producing rails, that all their billets will be consumed in this way, and among the United States plants there has been an extreme scarcity throughout the present year. Even the powerful American Sheet & Tin Plate Co., have been unable to procure a sufficient quantity of tin plate bars to get out orders with any degree of promptness.

If the Morrisburg tin plate mill ever commences operations, and the Canadian and United States steel plants cannot supply them with tin plate bars, these will have to come, in all probability from Germany, and the added expense of freight will very materially affect the cost of production.

An idea of the present situation may be gained from a letter written by the American Sheet & Tin Plate Co. to the U. S. Steel Products Export Co., concerning a Canadian order for tin plates. As will be seen, this letter is dated May 16th of this year, but since that time conditions have become even more acute than before. The letter referred to follows:

May 16th, 1906.

U. S. Steel Products Export Co.,
Order Dept., New York City:

Gentlemen,—We are in receipt of your letter of the 15th instant, relative to order XTP 435, and in reply have just telegraphed you that we expect to ship on Monday next a carload assorted sizes, open hearth, but that we will be unable to complete the order before June 2nd.

We are very sory that we have been obliged to consume so long a time completing this order, but it has been due to our utter inability to obtain earlier the open hearth steel necessary for its completion. On account of the difficulty of obtaining steel of this grade, it has been almost impossible for us, for some months past to make any intelligent promise, and we were never sure

we could fulfill a promise until the bars had actually been rolled.

While it has taken an unusually long time to get this order out, the cause was entirely beyond our control, and we assure you that every effort has been made, and will be made, to put the material in transit at the very earliest practicable date.

Yours very truly,

AMERICAN SHEET & TIN PLATE Co.

(Signed), E. K. Kennedy,
Ass't. Mngr. Order Dept.

If the great corporation who wrote this letter find it difficult and almost impossible to obtain the tin plate bars necessary for the manufacture of plates, how will this problem be solved by the Canada Tin Plate & Sheet Steel Co.?

RETAIL ASSOCIATIONS AT WORK.

It's easy to straddle a fence and watch some one else sawing wood—just as easy as to kick one's heels together and say that nothing can be done through re tailassociations, that the retailers won't hang together, etc. Honest criticism is always in order. The critic has often an honored place in society but the "knocker" is neither respected by himself nor those who know him.

The two articles on the Retail Hardware Association page in this week's issue show that some real constructive work is being done by the progressive spirits in the Western Canada and Ontario Retail Hardware Associations. The hardwaremen of the west will act wisely in taking united action on the question of the curtailment of credit. Only through united action can this evil, which eats away insidiously at the very vitals of the trade, be overcome. And success in Western Canada will inspire the trade in all parts of the Dominion to cut out the credit nuisance.

The questions asked by the Mutual Insurance Committee of the Ontario association are also timely. The success of the Manufacturers' Association in securing applications for two and one-half millions of mutual fire insurance can be duplicated on a smaller scale by the retail hardwaremen. And any mutual insurance project meeting with approval by the Ontario association will probably be made effective in Western Canada by the Western Association or taken up to cover the whole country by the proposed Dominion association.

The convention of the Canadian Manufacturers Association in Winnipeg next week will be asked to endorse the executive's proposal that two mutual companies be formed to carry the risks of the members of the association. At present no mutual fire company has a Dominion charter, owing probably to the fact that a Dominion charter means a deposit of $50,000, and, so far, no exception is made, whether the liability assumed is $2,000,000 or $80,000,000. An Ontario charter costs a farmers' mutual nothing in the way of a deposit, while a cash mutual, one that accepts mercantile or manufacturing risks, deposits $10,000.

Should there be opposition to the application for a Dominion charter the association will submit the following argument, among others: "We are not a profit-making company. On the contrary, we are an association of individuals, who are uniting for the purpose of insuring one another at the lowest possible cost and under the greatest possible efficiency. The principle of mutual insurance, being shorn of the profit-sharing feature, has not the temptation to the insurance either of inferior risks or the accumulation of risks subject to one fire. As a result, the security demanded from the stock company is not necessary from the mutual."

The Manufacturers' Association recognizes that the Dominion Government should enforce adequate protection for the policyholders of mutual companies. What this should be is a proper subject for conference and consideration. "The cash on hand," says one suggestion, "should be ample, and the members' premium obligations should be sufficient. There would then be no need of a cash deposit, certainly not one of $50,000, on the part of mutual companies."

According to a well-known insurance man, the Dominion Government is already considering the advisability of providing for the incorporation of Canadian mutual companies, and for the proper registration of such class of companies organized elsewhere. It is pointed out that many States of the American Union register mutual companies without requiring a deposit, though at the same time conserving the interests and safety of the public affected.

A great Australian exhibition in London is announced by the Pall Mall Gazette as being in process of organization by the agents general of the six states of the Commonwealth. When it has run its London career it is proposed to take the exhibition on tour through the principal provincial centres. All the leading Anglo-Australian firms have promised their cordial co-operation.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 29.

Old timers in the heating line will recognize an old friend in the picture we present this week, that of Mr. George Allen, who several years ago was one of the best known and most popular salesmen in radiation and heating goods calling upon steamfitters and heating contractors in Western Ontario. After many years of successful work on the road Mr. Allen retired to practice the profession of an architect at Brockville, and in this sphere he won an enviable reputation for himself.

Finding, however, that inside work was not congenial to him, he has taken down his shingle, and packed his grip with a change of clothes, some good cigars and a couple of copies of the beautiful catalogues describing the well-known Sovereign line of heating goods, and he is now calling on the trade in his old ground in Western Ontario, which has been, until recently, covered by Thomas Worthington, who is retiring from traveling owing to ill health.

GEORGE ALLEN, Brockville,

Selling Sovereign Boilers and Radiators in Western Ontario for the Taylor-Forbes Company.

Owing to his marked ability as a thorough and competent heating engineer Mr. Allen has been very popular with the architects in the trade, and his return to the road will be welcomed by all his old friends, while all users of Sovereign heating goods will appreciate the good fortune of the Talyor-Forbes Co. in securing the services of so capable an engineer and salesman to look after their interests in this important territory.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 62.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Pig Lead—Market very firm at $4.70 to $4.80.
Sheet Lead—Advance of ¼ cent.
Stanley Planes—A general advance of about 10 per cent.

TORONTO.

Pig Lead—A 20c. jump upward has been made.
Pig Iron—Londonderry is 50 cents higher.
Boiler Plate—Advances have been made.
Black Sheets and Canada Plates—A 10c. advance has been made.
Galvanized Sheets—We quote 5 cents higher.
Stanley Planes—Advanced 10 per cent.
Waste—Advanced ¼ cent a pound.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 14, 1906.

All the Montreal jobbers have been extremely busy this week, and the staffs of the various shipping departments have been worked to their capacity. The chief difficulty is still to secure goods from the manufacturers, who are so heavily booked with orders that their shipments are necessarily very slow. This seems to be felt by all the wholesale houses here.

The scarcity of bolts is as keenly felt as ever, and in some sizes supplies seem to be absolutely bare. Each of the large Montreal jobbing houses was this week in receipt of a telegram from a well known manufacturing firm in the province, asking if they could ship immediately a good order of machine bolts of certain size. This requisition could not however, be filled in its entirety. The incident shows how widespread is the scarcity of bolts.

Another line which is particularly scarce is coil chain. Manufacturers are away behind in their shipments, so that jobbers who were not heavily stocked are finding it difficult to make deliveries.

The only price change of importance to be noted this week is in Stanley planes, in which a general advance of approximately 10 per cent. has been declared. Detailed prices may be seen in our Current Market Quotations.

AXES—Business is rather more active this week. We are still quoting: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—No change in trade conditions is observed. Our prices remain as follows: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—A good turn-over is being experienced here. The following prices still prevail: "Prism," $7; "Prism" globes, $1.20; Cold Blast, $4; No. 0 Safety, $3.50 to $3.75.

COW TIES—Orders for these goods are large and frequent. The discount is still 40 per cent. off list.

STALL FIXTURES—Large shipments are being made. We are still quoting a discount of 35 per cent. off list.

SLEIGH BELLS—Many orders going out of the local warehouses at present contain sleigh bells. Quotations follow: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape, $1.15 to $2, shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

RIVETS AND BURRS—Shipments of good size are being sent out right along. Discounts are still as follows: Best iron rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—The past week has seen a good demand for this line. We still quote: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b. Montreal.

MACHINE SCREWS—Retailers are calling for good quantities. Our discounts are still as follows: Flat head, iron, 35 per cent.; flat head, brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—The scarcity of bolts is even more pronounced than before, especially as regards a few of the more staple sizes. We continue to quote: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS—The demand is brisk and jobbers and manufacturers are very busy shipping orders. We quote discounts as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—Nominal price remains $2.05 per keg base, f.o.b. Montreal.

CUT NAILS—Demand is only fair, with the price still quoted at $2.20 per keg f.o.b. Montreal.

HORSESHOES—The season is now well on, and a fine inquiry is reported. Prices are still quoted as follows: P. B. new pattern, base price $3.50 per 100 lbs.; M. R. M. Co., latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs. extra.

BUILDING PAPER — Conditions in this branch of the trade remain about the same. The busiest season of the year is at hand, and a brisker movement is then to be expected.

CEMENT AND FIREBRICK—We are still quoting: "Lehigh" Portland in wood $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—This line is one of the most difficult on which to obtain deliveries at present. We still quote as follows: 5-16 in., $4.30; 3-8 inch, $3.80; 7-16 inch, $3.60; 1-2 inch, $3.40; 9-16 inch, $3.35; 5-8 inch, $3.25; 3-4 inch, $3.10; 7-8 inch, $3.05; 1 inch, $3.

AMMUNITION—Good sized orders are still being sent out. Our quotations remain as follows: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto Sept. 14, 1906.

Skates, skate straps, horse blankets, bells, etc., are going out in good shipments on orders previously booked, but as yet there is little call for any other goods for sorting orders. Most orders being placed now are for cutlery and silverware. Guns and ammunition, rifles for deer shooting, loaded shells and in fact all lines of sporting goods are selling well. Axes are also selling well considering the quantity that is supposed to have been held over from last Winter.

Bolts, nuts, rivets and burrs are still scarce and there appears to be no relief in sight until well into the new year.

There are some indications of nails going back to their former position. Although they are selling openly for $1.95, the wire is costing more than it did when they sold for $2.15.

Stanley planes have advanced another

10 per cent. There are also indications of an advance in general lines of tools, as spoken of in these columns a short time ago.

Cleaned and manufactured waste has been advanced one-quarter of a cent, a duty of 20 per cent. having been imposed on the 1st of September, which is about equivalent to this advance.

AXES AND HANDLES—Trade has picked up during the past few days.

CUTLERY AND SILVERWARE—A particularly good business is reported this Fall.

SPORTING GOODS—Deer rifles, guns, loaded shells and ammunition of all kinds are in large demand.

WASHING MACHINES—An ordinary business continues to be done.

CHAIN—Coil chain is very firm and an advance is not improbable. We continue to quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; 3-8 inch, $3.95; 7-16 inch, $3.80; 1-2 inch, $3.65; 9-16 inch, $3.55; 5-8 inch, $3.45; 3-4 inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING — Our quotations are as follows: 2-inch mesh, 19 w.g., discount 50, 10 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE—We quote: $2.17 1-2 f.o.b. Cleveland.

BARB WIRE— We quote the following prices: On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65; f.o.b. Toronto.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—We quote nominally $2.25 base, but the market is open at $1.95. There are rumors of a return to former prices.

CUT NAILS—We quote: $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7 1-2 off list. "M.R.M." brand, 55 per cent. off. "Monarch" brand, 50 and 7 1-2 off. "Peerless," 50 per cent. off.

HORSESHOES—Our quotations continue as follows: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

HORSE BLANKETS — Some good shipments are being made.

SLEIGHBELLS—A fairly good business is being done in bells, although stocks from last Winter are said to be heavy.

FARM TOOLS—Forks are selling well and a good season has been experienced in all farm tools.

RIVETS AND BURRS—Tinned rivets are now quoted net extra 4c. per lb.

SCREWS—We quote: On gimlet point 70 and 5 per cent. off; on cone point, 70 and 10 per cent. off list.

BOLTS AND NUTS—The market is very bare and it is not likely that there will be anything like enough produced until well on in the new year. We quote 55 and 10 per cent. off list.

CEMENT—We quote: For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch fire brick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27 1-2c. to 35c.

WOOL AND HIDES—A ¼c. more is being paid for country hides, cured, and for rendered tallow, and the top prices are removed from wool. The market is quiet.

Hides, inspected, steers, No. 1	0 12½
" " " No. 2	0 11½
" " cows, No. 1	0 12½
" " " No. 2	0 11½
Country hides, flat, per lb., cured	0 11½
Calf skins, No. 1, city	0 13
" " No. 1, country	0 12
Lamb skins and pelts	0 75
Horse hides, No. 1	3 15 3 50
Rendered tallow, per lb.	0 05½ 0 05¾
Pulled wools, super, per lb.	0 25
" " extra "	0 27
Wool, unwashed fleece	0 16
" washed fleece	0 26

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Sept. 14, 1906.

Easily the feature of the present week has been the advance of pig lead. Prices are now fully twenty cents higher than at the corresponding day last week, and a good dollar in advance of the same period last year. An abnormally large demand has taxed the world's supply and materially assisted the bulls to force prices up to these remarkable figures. It may be mentioned that this price is the highest that has been reached by pig lead on the Canadian market for at least three years. Consumers of Canadian pig will be interested to know that the Trail smelter will shortly resume shipments.

Copper is practically the same as at our last report, and unchanged quotations prevail. Tin has been fluctuating as usual, almost daily, but the prices quoted last week have not been greatly disturbed, and we have made no change in our quotations. Spelter continues to advance in Old Country markets and a scarcity has developed there. Canadian prices are the same as last week, but are considered pretty low, in existing conditions.

Pig iron values are still going up. Inquiries are very heavy, and as nearly all furnaces, both on this continent and in Great Britain, are booked for several months ahead, there does not seem to be any prospect of a decline for some time to come. Pig iron, too, has easily surpassed last year's figures, the leading grades being quoted at from $2 to $4 higher than during September, 1905.

Among the sheet metals, sheet lead is the only one to score an advance, this, of course, being a result of the big jump in pig lead.

Canada plates are very scarce at the present time, and, in fact, the demand for all classes of sheet metals is so strong that many of the leading producers are crowded with orders which cannot be filled for several months.

COPPER—No change has yet occurred in the condition of this market. We quote: Ingot copper, 21c. to 21 1-2c.; sheet copper, base sizes, 25c.

INGOT TIN—The price goes up from day to day. We are still quoting: 44c. to 44½c. per pound.

ZINC SPELTER—In spite of further advances in the Old Country, we are still quoting: $6.75 to $7 per hundred pounds.

ANTIMONY—There is nothing new to report. We still quote 27c. per lb.

PIG LEAD—A record price has been reached and we are now quoting $4.70 to $4.75 per hundred pounds.

PIG IRON — The upward tendency continues. Although we do not change quotations, they may be considered as stronger than last week. Our prices are:

"Dom.," No. 1.	$19.50 to $20.00	delivered	Montreal
Usual difference in price for lower grades.			
Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	delivered	Montreal
Carron No. 1	23.00	"	"
" (special)	22.00	"	"
Summerlee No. 1	22.75	"	"
" No. 3 (soft)	21.75	"	"
Clarence No. 1	20.00	"	"
" No. 3	19 65	"	"
Cleveland No. 1	20.00	"	"

BOILER TUBES—We still quote: British and American tubes, 1½ inch, 8½c.; 2 inch, 8½c.; 2½ inch, 10c.; 3 inch, 12c.; 3½ inch, 15½c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Business is brisk at the following quotations: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror High Speed Steel, 60c.; Jowitt's Diamond J., 6¼c. to 7c.; Jowitt's Best, 11c. to 11½c.

MERCHANT STEEL—The usual trade is being done. Our quotations are as follows: Sleigh shoe, $2.17½; tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.15 base and upwards; square harrow teeth, $2.27 1-2.

Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—We still quote: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON— Firmer conditions prevail this week and advances are almost sure to be made, very shortly. We still quote: Queen's Head, 28 gauge, $4.35 to $4.60; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge, $3.35; Gorbal's "Best Best," 28 gauge, $4.25 to $4.50; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—We are quoting: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

CANADA PLATES—The demand is apparently ahead of the supply, as a scarcity is reported. Quotations remain: 52's, $2.60; 60's $2.65l; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

TIN PLATES—The market remains steady at the following prices: Cokes, base size, 1C 14 x 20, $4; charcoal, base size, 1C, 14 x 20, $4.25.

TERNE PLATES—We still quote $6.85

SHEET ZINC— Although firmer in tone, the price remains unchanged. We still quote: $7.75 in casks; $8 in less than casks.

SHEET LEAD—Another advance has been scored, owing to the jump in pig lead. We quote prices: 2 1-2 lbs., 6c. by the roll; 3 lbs. and heavier, 5 3-4c. by the roll; small quantities, 25c. per hundred pounds extra.

BAR IRON—We are still quoting $2.05 base, f.o.b. Montreal.

OLD MATERIAL—Dealers' prices are: Light copper, 14½c.; heavy red brass, 14½c.; yellow brass, 11½c.; light brass, 8c.; lead, 3½c.; zinc, 4c.; machinery cast scrap, $15; wrought scrap, $13 to $14; stove plate scrap, $12; mixed rags, $1 to $1.20 per 100 lbs.; old rubbers, 7¾c. to 8c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, September 14, 1906.

Advances have been made during the past week in several lines, that in pig and bar lead being the greatest. Imported pig is now quoted from $4.85 to $5 and bar at about $5.50. The increase has been in response to the big jump in foreign markets, owing to an exceptionally brisk demand which has had a visible effect on available supplies. Lead is now quoted at a higher price than has prevailed on the Canadian market for over three years and if prices are maintained for any length of time, and indications seem to point that way, quotations on solder, lead pipe, white lead and kindred lines are bound to make further advances.

The iron market continues very strong and while bars can be procured more readily than some time ago, there is still a marked scarcity in bolts and nuts and stocks in the wholesale houses need sorting up badly. Londonderry pig iron has been advanced to $23 f.o.b. Toronto and from all quarters the report comes that pig iron conditions are very stiff.

A scarcity has also developed in galvanized sheets and deliveries cannot be procured in less than eight weeks. We quote five cents higher this week and on black sheets and Canada plates an advance of 10c. is recorded.

Tin and copper remain practically the same as a week ago, the same being true of zinc spelter, in spite of the increased firmness of the last mentioned line in foreign markets.

Boiler plates and tubes show several advances owing to the increased prices of raw material which developed some weeks ago.

PIG IRON—Londonderry No. 1 has been advanced 50c. Little improvement is noted in shipments, all orders being held for delivery for several months ahead. In every quarter firmness is evident. We quote: Radnor at furnace, $33; Hamilton at furnaces, No. 1, $21.50; Londonderry, f.o.b. Toronto, No. 1, $23; Middleborough, $22.50 to $23.

BAR IRON—While deliveries are still slow an improvement is noted. Demand keeps lively and prices stiff. We quote: $2.15 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

INGOT TIN—Fluctuations in outside markets continue, but prices remain as before. Locally the dealers are asking from 42c. to 43c. per lb.

TIN PLATES—Trade is active with prices unchanged. We quote: Cokes, base size, 14x20, $4; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS—Stocks are short and deliveries hard to get under a couple of months. Advances have been made on black sheets and Canada plates, each being marked up ten cents, while galvanized sheets are marked up five cents.

BRASS—The market continues firm with no price changes. We quote: 23c. to 24c. per lb.

COPPER—Prices are firm and the tendency is upward. Our prices are: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

LEAD—A marked jump has been made and prices have reached the highest mark since 1903. We quote $4.85 for imported pig and $5.50 per 100 for bar lead.

ZINC SPELTER—Locally buying is active, but generally the markets are quiet. Prices remain unchanged. We quote: 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

BOILER PLATES AND TUBES — We quote: Plates, per 100 lbs., ¼ in. and up, $2.45; heads, per 100 lbs., $2.60; tank plates, 3-16 inch, $2.50; tubes, per 100 feet, 1½ inch, $8.50; 2, $8.80; 2½, $10.75; 3, $12; 3½, $15.80; 4, $21. Terms, 2 per cent. off.

ANTIMONY—Good business is being done in small lots. Prices are unchanged at 27c.

OLD MATERIAL — Dealers' buying prices are as follows: Heavy copper and wire, 15c. to 15½c. per lb.; light copper, 13½c. to 14c. per lb.; heavy red brass, 13c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8¼c. per lb.; tea lead, $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs.; scrap zinc, 4½c. per lb.; iron, No. 1 wrought, $11; No. 2 wrought, $3 to $5; machinery cast scrap, $15; stove plate, $10; malleable and steel, $5; old rubbers, 7¾c. per pound; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—We quote the following prices: Anthracite in cars at bridge, egg, stove and nut, $5.50; grate, $5.25; pea $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. P. and S., $1; slack, 75c.; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1¼ inch, $2.55; ¾ inch, $2.45; mine run, $2.35; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

U. S. METAL MARKET.

From the Iron Trade Review, Cleveland, Sept. 13, 1906.

While the buying of pig iron, especially of foundry grades, continues heavy, the market of the past week has been quiet in comparison with that of the previous month. Furnaces are well sold through the first quarter, and as a rule are not actively soliciting new orders. An occasional lot of spot iron is discovered to meet the wants of a favored consumer, but prices for early delivery continue high. Some southern furnaces are offering to contract for the first half at $15 for No. 2 foundry, and heavy bookings are reported in this district. A sale of 10,000 tons of basic for delivery during the first five months of 1907 at $18.25 valley is reported. No large Bessemer sales have come to light during the week.

In a number of lines of finished materials a marked easing up is noted and better deliveries are procurable. There are reports in the Chicago district of concessions of jobbers on structural shapes and the principal producer is now able to make prompt shipment. In this locality a larger supply of semi-finished material will soon be available. In the east the scarcity of crude steel is unabated.

Ore shipments during the first week in September were extremely heavy, but a decline is inevitable from now on owing to a combination of circumstances, chief of which is the growing scarcity of cars. Certain ore producers who are finding their output heavier than their season's sales are securing an advance of from 25 to 75 cents a ton over contract rates.

Consumers of wire products are coming into the market earlier than usual, and the demand is extremely strong. Agricultural specifications in merchant steel are remarkably heavy. Steel bars are selling actively and merchant pipe and boiler tubes are in good demand. Scrap prices vary in different sections of the country, the average being about stationary.

LONDON METAL MARKETS.

From Metal Market Report, Sept. 12, 19 6

PIG IRON—Cleveland warrants are quoted at 54s. 9d., and Glasgow standard warrants at 54s. 2d., making prices as compared with last week 4½d. higher for Cleveland warrants and 4d. higher for standard warrants.

TIN—Spot tin opened easy at £184 17s. 6d., futures at £183 7s. 6d., and after sales of 100 tons of spot and 180 tons of futures, closed quiet at £185 for spot, £183 10s. for futures, making price compared with last week unchanged on spot, 17s. 6d. lower on futures.

COPPER—Spot copper opened quiet at £86 12s. 6d., futures £86 10s., and after sales of 300 tons of spot and 200 tons of futures, closed steady at £86 12s. 6d. for spot, and £86 10s. for futures, making price as compared with last week 5s. higher on spot and 3s. 6d. higher on futures.

LEAD—The market closed at £18 3s. 9d., making price as compared with last week 6s. 3d. higher.

SPELTER—The market closed at £27 10s., making price as compared with last week unchanged.

Nova Scotia Trade News.

Halifax, N.S., Sept. 12.

Just at the present time the hardware business is a little quiet, which fact is probably attributed to the approaching Dominion Exhibition at Halifax. Business, however, up to the present has been most satisfactory, and the jobbers have no complaint to offer with regard to the temporary dullness. The jobbers are now filling orders for axes and lanterns which were booked months ago for delivery early in September. Axes, single bit, are quoted at $5.50 per dozen, and double bit at $9.50 per dozen. White lead is showing tendency to advance. The difficulty over the price of nails has been amicably settled, and the prices agreed upon. Wire nails are quoted at $2.25 base and cut at $2.40 base. Turpentine is steady at 95 cents. Stocks of glass here are very light and prices are firm. Rope has been advanced one-half a cent per pound, the best manilla now being quoted at 16½ cents. Boiled oil is quoted at 63 cents and raw at 60 cents. Jobbers say that the season for builders' supplies has been the best for years.

* * *

The city Board of Works Department has just opened tenders for eighty thousand pounds of cement as follows:

Stairs, Son & Morrow—58 6-10 cents per 100 lbs. net.

E. F. Stevens—56¾ cents.

A. M. Bell & Co.—58 cents.

Mr. Stevens' tender, being the lowest, was recommended for acceptance. The tenders were all for White's brand of cement.

Tenders for iron water pipe were opened as follows:

R. L. Wood, Philadelphia, $40 per ton (2,000 lbs.)

Stairs, Son & Morrow, $39.60 per ton (2,000 lbs.)

D. Murphy, $37.90 per ton (2,000 lbs.)

Mr. Murphy's was recommended for acceptance.

* * *

Results from the last clean-up at Beaver Hat mine showed 71 ounces of gold to 190 tons of quartz crushed.

Two blocks of gold weighing 43 ounces were brought to the city last week. The gold crushed from two and one-half tons of ore from a mine at Gold River, Lunenburg County. The mine is owned by R. E. Verge and others, of this city. The gold is valued at $800. The returns from A. J. Crease's mine at Mount Uniacke last month were 34 oz. 5 dwt. of gold, taken from a crushing of 12½ tons of quartz.

The contract for the heating and plumbing of Senator McDonald's new block at Sydney has been awarded to Thompson & Matheson, of Sydney.

The Dominion Tar & Chemical Co., of Sydney, is now building two tar stills and enlarging the pitch bed in order to meet the requirements of expanding business.

The Sydney Cement Company is just commencing the construction of a large warehouse to house their stock. This will be built of concrete. Messrs. Dixon & Falconer have the contract for both the above additions.

SUBSTITUTES FOR TIN.

In discussing the recent high prices of tin in England, L. Parry, in the London Mining Journal says that it is difficult to speak with any degree of certainty in regard to securing a substitute for ornamental bronzes, but the use of tin is, however, not an absolute necessity and its consumption for the purpose has been diminishing for some time. On the other hand, an increased amount of tin is probably now used in the manufacture of white metal ornaments—e.g. in the case of white bronzes.

Many white metal combinations are employed in making ornaments, and it is probable that the demand with regard to quality readily accommodates itself to the supply. The quality of such goods probably varies far more than the price; if tin keeps up in price for a year or two, it will probably be found that the percentage of tin in white metal ornaments will diminish considerably. With regard to white metals used as bases for electroplating with gold and silver, it has already been found possible to use aluminum; the processes are still in their infancy, but no doubt the use of aluminum for this purpose will become more and more common, the price of the two metals being now about the same. Aluminum was quoted at London on May 19 at 1s 9d per lb., or £196 per ton, while on the same date tin was £194, or 1s 8 6-7d per lb. According to Dr. Minet, the annual production of aluminum in 1889 was about 70 tons, and the price about 30 frs, per kilo. With the introduction of the electrolytic processes, the price had fallen to 3 frs, per kilo (1s 2 1-2d per lb.) in 1900, while the output had risen to 5,000 tons. Dr. Minet gives the cost of production of 1 kilo of aluminum (— 2,204 lbs.) at 2.79 frs.; of this, 1.10 frs. is put down for the cost of 2.2 kilos of alumina at 0.50 frs. per kilo. That is to say, the cost of production apart from the ore, the aluminum is 1.69 frs. per kilo of aluminum, or about 8d per lb.—about £75 a ton. In 1900 the cost of aluminum was .50 frs. per kilo, or about £23 per ton, and the total cost of production, including cost of alumina used, £124 per ton. There seems to be a very considerable margin between these figures and the present price of aluminum. Raw material in the form of clay, and costing next to nothing, exists in practically unlimited quantities, and it should certainly be possible to produce alumina of a sufficient degree of purity at very considerably less than £23 a ton. With an increased demand the output of the metal is certain to increase thus lowering the cost of production; and if the price declines to a more reasonable figure, as it may easily do, the consumption is bound to increase.

BRITISH IRON AND STEEL TRADE.

The imports of iron and steel into Great Britain for the six months ending June 30 were 721,199 tons, as against 632,854 tons in the corresponding period last year. If this rate were continued to the end of the year it would give the largest year's import record ever made. But even a greater increase over the first half of 1905 is shown in the total of iron and steel exports, which was 2,107,435 tons for 1906, against 1,739,166 tons for 1905. The value of exports of iron and steel and allied products, including machinery, was $220,000,000, an increase of about $50,000,000, or 30 per cent. over the figures for the first half of 1905. The principal item of increase in exports was in pig iron and puddled iron, from 449,760 tons to 706,867 tons, the principal part of which went to Germany. The decline in rail exports, which has been the occasion of complaint that the international rail agreement has been detrimental to British rail mills, was more than 25 per cent., or from 262,403 tons in the first half of 1905 to 191,909 tons in the first half of 1906. Tin plates fell off in exports from 186,109 tons to 177,288 tons.

Hardware and Metal Conditions in Manitoba

(Market quotations corrected by telegraph up to 12 a.m. Friday, Sept. 14 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

A further advance in pig lead is the feature of the market this week. Mixed paints are also advancing owing to the increases in lead and oil.

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Wholesale prices continue steady but in many districts dealers are cutting the retail price. We quote: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per dozen.

WIRE — We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ¼ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅜ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅜ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ⅜, $4.10; ½, $7.20; ⅝, $4.60; ¾, $4.30; ⅞, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—Discount on "Irwin" bits is 47 1-2 per cent., and on other lines 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES—As noted last week, the price is now 1 1-2c. per lb. A decline of 1-4c.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

CLEVISES—Price is now 6 1-2c. per pound.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discount is 50 per cent.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Quoted now at 4c per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC. — Prices are still quoted as follows: Cartridges, Dominion R. F., 50 and 5; Dominion, C. F., pistol, 30; military, 20; American R. F., 33⅓; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.25; chilled, $7.75; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—Prices are: Bar iron (basis), $2.50; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jesson, $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—Prices are very firm. $5.25 per cwt. with a reduction of 25c. per cwt. on ton orders.

AXLE GREASE—"Mica" axle grease is quoted at $2.75 per case, and "Diamond" at $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are quoted as follows: Silver Star, per gal., 21c.; Sunlight, 22c.; Eocene, 24c.; Pennoline, 25c.; Crystal Spray, 24c.; Silver Light, 22c.; gasoline, 70-72 (engine), 25½c., in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE —Mixed paints are being advanced owing to advances in lead and oil. We

quote: White lead, pure, $7; bladder putty, in bbls., 2½c.; in kegs, 3¾c.; than barrel lots, 92c.; linseed oil, raw 64c.; boiled, 67c.

WINDOW GLASS—We quote: 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40. turpentine, pure, in barrels, 97c.; less 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4.00; 26 to 40, $4.52; 41 to 50, $4.75; 50 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75; 91 to 95, $17.30.

THE STREET DUST NUISANCE.

A novel street-cleaning appliance is at present in use in the City of Washington. It consists of a hand sweeping machine, which is worked somewhat on the principle of the carpet sweeper. The city employs 115 men, who work with hand-brooms, while 75 men operate hand-sweeping machines.

Each man handling one of these sweepers is required to sweep 10,000 square yards of pavement, going continually over the area during the day and depositing the sweepings at stated distances along the curb. To every sweeper there is a bag carrier, equipped with a pick-up machine, gathering the sweepings in bags.

This device is a two-wheeled vehicle, holding a bag upright, and fitted with a scraper attached to the handle resting on the ground, and when filled inverted into the sack. The sacks, when filled, are collected by the 10 wagons owned by the department, and hauled to the public dumps, of which there are eight.

Each sweeper is also provided with a sprinkling pot holding five gallons, with which he is required to sprinkle the area before sweeping. The force is divided into six districts of about equal extent, with 35 men in each. Every district is in charge of an inspector, provided with a bicycle, whose duty it is to see the work properly done and make a daily report of men employed, area covered and number of loads of sweepings removed.

BRONZING SEASON

means bronze business, and the question you should ask yourself is: "Am I prepared to take care of this business?"

We have a large stock of Bronzing Materials—Gold, Aluminum and Colored Bronzes, Flitters, Metallics, Banana Oil, Gold Leaf Substitute, on which we would be pleased to quote you for immediate delivery.

OUR LETTER BOX

Correspondence on matters of interest to the hardware trade is solicited. Manufacturers, jobbers, retailers and clerks are urged to express their opinions on matters under discussion.

Any questions asked will be promptly answered. Do you want to buy anything, want some shelving, a silent salesman, any special line of goods, anything in connection with the hardware trade? Ask us. We'll supply the necessary information.

CASH BOXES AND DRAWERS.

W. H. Turnbull & Son, Brantford, ask: "Kindly inform us of any manufacturers or dealers in cash boxes or drawers—not cash registers?"

Try Taylor, Scott & Co., Toronto, and the Office Specialty Mfg. Co., Wellington street west, Toronto.—Editor.

WOODEN GOODS.

E. K. Spinney, Yarmouth, N.S., writes: "Will you be good enough to advise me, if you have the information, the names of some manufacturers of barrel covers and wood liquid measures. I have been endeavoring to ascertain, without success, this information."

The G. & G. Flewelling Mfg. Co., Hampton, N.B., and the United Factories, York street, Toronto, manufacture barrel covers, while A. Root, Greenbush, Ont., J. J. Magee, London, Ont., and the United Factories, Toronto, make the wooden liquid measures.—Editor.

TIN BROOM LOCKS.

The Crown Broom Works, Vancouver, B.C., ask for the address of a manufacturer of tin broom locks.

Fairgrieves, Limited, 117 Brock avenue, Toronto, make these goods.—Editor.

WINDOW LETTERS.

Taylor Bros., Carleton Place, Ont., ask to be supplied the addresses of manufacturers of aluminum of gold-plated letters, suitable for windows.

The Canadian Aluminum Co., Chambly Canton, Que., make aluminum letters, the James Morrison Brass Mfg. Co., Toronto, make brass letters, while Patterson & Heward, 319 King street west, Toronto, and A. Stevenson, Lombard and Church streets, Toronto, sell other lines of enamel and metal letters.—Editor.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

1062. Machinery.—A Yorkshire engineering firm manufacturing all descriptions of stone, marble, granite and slate machinery, circular saws, planers, polishing machinery, steam and electric cranes and pneumatic plants, invites correspondence with Canadian buyers.

1065. Iron.—A Hull firm manufacturing special composition for the protection of ships' holds and decks, also iron of every description, invite correspondence with Canadian buyers to whom samples will be sent on request.

1066. Antimony ores, etc.—A London firm are desirous of getting into touch with merchants or mine owners in Canada who may be wishing to dispose of their products, antimony, ores, etc., would be purchased if quantities available.

1067. Agency.—A Liverpool firm interested in heating apparatus, etc., are anxious to negotiate an agency in Canada for the suitable representation there of a system of ventilation.

1077. Patent inventions.—The owners of a patent invention for manufacturing bottles are desirous of interesting Canadian firms in the trade with a view to the adoption of the system. They are also desirous of disposing of their rights in patent burners for liquid fuel.

1098. Iron and manganese ore. — A firm of metal merchants in London make inquiry respecting deposits of iron and manganese ore available in Canada for work, the intention being to utilize them, if possible, for the manufacture of ferro-manganese.

1100. Fishing tackle.—A Birmingham firm dealing largely in fishing tackle wish to correspond with Canadian buyers.

1101. Sanitary tubes, etc.—Inquiry is made by a London firm manufacturing sanitary tubes and patent stoneware pipes of various kinds who desire to get into touch with Canadian importers of these goods.

1102. Fireclay goods, etc.—A Yorkshire firm manufacturing fireclay goods, white and colored glazed bricks, baths, terra cotta and faience, gullies, traps, sinks, etc., wish to correspond with Canadian users of such articles.

1103. Steel and iron.—A Belgian firm desire to form connection in Canada with importers of steel and iron in bars and plates, beams, building or structural rolled sections, ingots, billets, blooms, slabs, etc.

1106. Nails, etc.—A Yorkshire firm manufacturing all kinds of iron, steel, copper, zinc, lead and brass-cut nails, brass and iron shoe and boot rivets, cut tacks, joiners' brads and wire nails, invite correspondence with Canadian buyers.

FOUNDRY AND METAL INDUSTRIES

The Boundary Iron Works at Grand Forks, B.C., have been destroyed by fire. Loss $15,000.

The town of Carman, Man., asks tenders for an elevated steel tank to hold 60,000 gallons of water.

The Nelson Iron Works, Nelson, B.C., will build a large new works to keep up with their increasing orders.

The foundry of F. E. Middleton, Ridgetown, was badly damaged by fire. It was covered by insurance.

Net earnings of the Granby smelters during the fiscal year ending June 30, 1906, amounted to $1,800,000.

The corner stone of the Montreal Smelting & Refining Company's new plant was laid at Trout Mills, Ont., on the 10th inst.

McLean, Holt & Co., St. John, N.B., are about to put up a manufacturing plant on Courtenay Bay. The new property has a frontage of 700 feet.

The Town of Leamington, Ont., is considering a proposition to lend a Detroit company $30,000 to assist them in manufacturing automobile brass goods and trolley wheels.

It is understood in Montreal that the negotiations between the Canadian steel companies and the Dominion Government for an extension of the steel bounties will be closed in a few days, and that the Government has agreed to an extension.

It is announced that a combination of Scotch and English steel tube manufacturers to regulate the home and export business has been formed, with a view to abolishing the present keen competition. The industry has suffered incalculably since the previous agreement between the firms in this line was cancelled 18 months ago. The new agreement is wider in its scope than the old one, taking in all the firms in the United Kingdom except one Clydeside concern. It is expected that an advance in prices will soon be announced, as it is believed the agreement carries permanency with considerably increased by next season. it.

The Dominion Coal Co. have issued upwards of twenty writs in the Supreme Court of Nova Scotia against miners whom they brought out from the Old Country and who lately left their employ and went to work at Inverness. The writs are for various amounts, but include a charge for money advanced to the person and for an amount paid for the man's passage money out from England. These men are alleged to have been disappointed at the wages paid them on their being put to work, claiming it to be far below what was promised them before they left the Old Country. It is understood that those of them who will contest the suits will place their defence along these lines.

The Fall painting season is here. It's a *good* season to paint and a *good* season to use *good* paint.

For Dealer or Customer, *Sherwin-Williams Paint, Prepared*, is *good*.

Good for the Dealer because it brings him better trade, better profits, better reputation.

Good for the Customer because it brings him better quality, better results, better satisfaction.

There's the matter in a nut shell.

S. W. P. is the one *good* paint proposition for you.

Drop us a line about it.

SHERARDIZING.

Sherardizing is the name given a new process for the prevention of iron and steel corosion. While the results are the same as either hot or cold galvanizing, the method is said to be cheaper, more convenient, and gives a better coating. An interesting feature is that iron and steel can be coated with an even deposit of zinc at a temperature several hundred degrees below zinc's melting point. The first step is to free the iron from scale and oxide by any familiar method. It is then placed in a closed iron receptacle charged with zinc dust, which is heated to a temperature of from 500 to 600 degrees, turned for a few hours, and allowed to cool. On removing the iron it is found coated with a thin homogeneous covering of zinc, the thickness depending on the temperature and the length of time. The temperature required is about 200 degrees below the melting point of zinc, this low temperature rendering the process cheap as compared with the dipping process. It has the additional advantage of not deteriorating the iron or steel of small sections to the same extent as hot galvanizing; and there is no loss of zinc dust. The process is not limited to the coating of iron with zinc, since it has already been successfully applied to coating iron with copper, aluminum, and antimony. It has also been used to coat other metals, such as aluminium and copper with zinc. Copper and its alloys treated in this way, are case hardened on the surface, and can be made so hard as to turn the edge of tool steel.

PAINT, OIL AND BRUSH TRADES

THE OXIDATION OF LINSEED OIL.

It has long been known that linseed oil dries by combining with oxygen, and that in so doing it gains in weight. At least one competent authority says that in drying it gives off water and carbon dioxide; but, as this latter assertion seems incompatible with the gain in weight which all observers have recorded, the following experiment has been made to test the truth of the assertion:

Six weighed glass flasks, of about 600 c.c. capacity each, were fitted with rubber stoppers, through each of which passed two glass tubes, one reaching near the bottom of the flask and the other about one inch below the stopper. These tubes were bent, above the flasks, at right angles, so that they could be joined with bits of rubber tubing, so that a current of pure air could be drawn through the whole. To remove moisture and carbon dioxide, the air was first passed through jars filled with calcium chloride and lumps of caustic potash; and on leaving the apparatus it was again passed through a calcium chloride tube and caustic potash. One of the flasks was then filled with pure raw linseed oil, from which it was poured into a second flask, and so on until each flask had been wetted with the same oil, The flasks were drained, weighed, and then set up in series and connected as indicated; then a slow current of air was drawn through the apparatus by a filter-pump. It was anticipated that in about ten days the oil film would be dry, and then the flasks would be again weighed, also the drying tube, and the carbonic acid estimated. Considerable care was taken to make the joints tight, although, as the whole apparatus was open to the air at one end, leakage was not expected. The oil did not, howevr, uniformly wet the inside of the flasks, but the film at first formed broke up and gathered into drops, and a little pool of oil formed at the bottom of the flask. The flasks were new and clean. After a day or two the oil in the first flask began to bleach and in due course dried, as was shown by the formation of a film of linoxyn, and then dried still further, as indicated by the shrivelling and wrinkling of this film; and all this time, which was about ten days, the oil in the other flasks was not acted on. Then the oil in the second flask began to bleach, and dried; then the oil in the third flask; and, after more than two months, the oil in the sixth flask was finished. Evidently something was done to the air in passing through a flask containing a few hundred mgrms. of oil which prevented it from oxidizing any more oil. This seems remarkable, and worthy of record. Possibly it was the removal of ozone; if this should be shown to be true, it would account for the fact that oil dries more rapidly out of doors than within, and this is true whether it is in the sun or not. These flasks were not in direct sunlight, but were in a well-lighted room, and directly under a skylight. When the calcium chloride and the potash were examined, it was found that they had gained in weight far more than was possible to account for except by leakage; but this is not remarkable, as everyone knows who has tried to make joints tight for a long time; so the original purpose was defeated.

When the flasks were weighed, it was found that in no two of them was there uniform percentage increase of weight of oil; and the extremes, which were in adjacent flasks, differed so much that one had gained two and a half times as much as the other, the figures being 10-1 and 25-5 per cent. Yet it was the same oil that was put in all these flasks; and the amount which remained in the several flasks was about the same, being about 300 mgrms. After this, the stoppers were removed from the flasks, which were then hung up, mouth downwards, for several months, and occasionally weighed; no important changes developed. They were then cleaned and reweighed, and the original weights were thus verified, An attempt was made to repeat this experiment with greater care, but after a time leakage developed, and the experiment was abandoned; but as far as it went it agreed with the one described.

In connection with this, it may be well to refer to the work of G. Keppeler, in his studies on the Hargreaves sulphate process, as reported in "Chemische Industrie" for 1905, No. 5, page 173, where he says: "Oxygen, under the influence of certain treatment or of some substances, loses its property of readily effecting oxidation, and heating the oxygen reduces its oxidizing power." It will be remembered that ozone is destroyed by heat or by contact with rubber or other oxidisable matter. (Paper read before the New York section of the Society of Chemical Industry, by A. H. Sabin, and reprinted from the Society's Journal.

In a letter received from a British Columbia Customer he says:

"That Hollywood Paint of yours has exceedingly good covering qualities, much better than white lead and goes farther."

This is a general verdict from the Atlantic to the Pacific.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 14, 1906.

The feature of the past week was a stiffening tendency in all lead products, owing to firmer markets in England. However, on account of the advent of the Exhibition season, and many vacations on the part of buyers, sales have not been very heavy.

Travelers are now commencing to take up their usual territory, and it is thought that by the middle of the month a good Fall campaign will be opened.

The southern market saw a sharp and sudden decline in temperature, during the past week, but the recovery was so rapid that few dealers were able to take advantage of the low prices, and quotations are about the same as last week.

Linseed oil has been fluctuating slightly, but not to an extent sufficient to disturb existing quotations materially. At the present time they are at the same level as was reported in our last issue.

White lead is very firm and it is hard to get deliveries. All the principal manufacturers are said to be sold up for the balance of the year, and buying in any quantity is almost impossible.

LINSEED OIL— There have been some fluctuations, but the following prices are again generally quoted: Raw, 1 to 4 barrels, 52c.; 5 to 9 barrels, 51c.; boiled, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.

TURPENTINE—The southern market has recovered from a sharp decline and quotations are now back to the following figures: Single barrel, 86c. per gal.; two barrels or over, 85c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC— The market remains unchanged at following prices: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5½c. to 6½c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c., smaller quantities, 8½c.

RED LEAD—In common with all lead products this line continues very firm. We still quote: Genuine red lead in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

GUM SHELLAC—Prices remain unchanged as follows: Fine orange, 60c. per lb.; med. orange, 55c. per lb.; bleached shellac (white) 65c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—We still quote as follows: Firsts in cases, 8 1-2c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

GASOLINE—The ruling quotation at present is 24c. in bbls.

BENZINE—There is nothing new this week and we are still quoting 20 1-4c in barrels.

WINDOW GLASS—A brisk turnover is the experience of the jobbers, and importers are booking large orders for delivery before the close of navigation. We quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.70; third break, 100 feet, $4.25; fourth break, 100 feet, $4.45; fifth break, 100 feet, $4.70; sixth break, 100 feet, $5.25. Diamond Star: First break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second break, $4.80; third break, 100 feet, $5.75; fourth break, 100 feet, $6.50; fifth break, 100 feet, $7.50; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8; eighth break 100 feet, $9. Double Diamond: First break, 50 feet, $3.45; second break, 50 feet, $3.75; first break, 100 feet, $6.75; second break, 100 feet, $7.25; third break, 100 feet, $8.75; fourth break, 100 feet, $10; fifth break, 100 feet, $11.50; sixth break, 100 feet, $12.50; seventh break, 100 feet, $14; eighth break, 100 feet, $16.50; ninth break, 100 feet, $18; tenth break, 100 feet, $20; eleventh break, 100 feet, $24; twelfth break, 100 feet, $28.50.

THE AUTUMN

is presumably the BEST TIME to paint. After the first appearance of cold weather the flies, like the proverbial ANGELS' VISITS, become "FEW and FAR BETWEEN." The clouds of dust cease, and the absence of muggy, steamy weather facilitates paint drying, and one is in a jolly mood to wield the brush !

Take an hour in the PAINT and VARNISH department and note in your "WANT BOOK" deficient lines of DRY COLORS, COLORS IN OIL, COACH COLORS, WHITE LEAD, WAGGON PAINT, WOOD STAINS, HOUSE AND CARRIAGE VARNISHES, BUGGY and SLEIGH paints, READY-MIXED PAINTS, especially the FLOOR PAINTS. Now turn to BARN PAINT, STOVE PIPE VARNISH, ALUMINUM AND GOLD PAINT, Look into ASBESTOS STOVE LINING, KALSOMINE, and don't forget the PUTTY.

One or **two** lines should be singled out and pushed **every day** by what is called in England "the **introduction method.**" This means: after a customer has made an ordinary purchase, you tactfully and "with winning grace" show him a small tin, say, of the **Canada Paint Company's aluminum paint,** and remark, "Have you seen our **silvery aluminum paint ?**" Show it off by painting a few strips of stove pipe iron. **Don't** be too obtrusive, but enlarge upon its merits. Now hand out a **C. P. Co.'s liquid paint folder** and sweetly invite the customer, him or her, to "**come again !**" Change your specialties **each day,** or at least **every other day.** Keep a **bright look out** for **casual telephone orders,** and make a list of your **largest regular buyers,** and call them up, at least **once a week,** for **"anything on the list, please ?"**

Having done all this, **mail** a **nicely assorted** order to where it will be **appreciated,** that is to say to

THE CANADA PAINT COMPANY

LIMITED

largely nominal, and perhaps a trifle high. Turpentine is firm with no change. It is difficult to make any forecast of what turpentine will do, as reports from primary markets change daily.

White lead is firm and scarce, and indications point to even firmer conditions. Pig lead is away up and all lead products are as a result affected. Business in general lines of paint is quieter but an impetus is looked for in October and November.

WHITE LEAD — Ex Toronto, pure white, $6.30; No. 1, $5.92 1-2; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; 1-2c. per pound extra will be charged for 12 1-2 pound packages; genuine dry white lead in casks, $5.40.

RED LEAD—Genuine in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.60; No. 1 in casks of 500 lbs., $5.50; ditto, in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c.; in 100 lbs., 7 1-2c.;No. 1, in casks, 6c.; in 100 lbs., 6 1-2c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c.; in 12 1-2 lbs., 8 1-2c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 90c. per gallon.

PARIS WHITE—90c. to $1 per 100 lbs.

WHITING—60c. to $1 per 100 lbs. Gilders' whiting, 75c.

SHELLAC VARNISH—Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange) $2.25.

LINSEED OIL—Our quotations are: Raw, 1 to 4 barrels, 57c.; 5 to 9 barrels, 55c.; boiled, 1 to 4 barrels, 60c.; 5 to 9 barrels, 58c. Toronto, Hamilton, London and Guelph; net 30 days. Advance of 2c. for delivery to outside points.

TURPENTINE—Single barrels, 91c.; 2 to 4 barrels, 90c., f.o.b. point of shipment, net 30 days. Less than barrels, 96c. per gallon.

GLUES—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2c. to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c. per lb.; No. 1 American white, 15c. per lb.

PUTTY—Ordinary, bladders in barrels, $1.80; pure linseed oil, $2 to $2.10; bulk, in 800-lb. casks, $1.50; pure, $1.95 to $2; 100-lb. kegs, 25c. extra.

LIQUID PAINTS—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.

CASTOR OIL— English, in cases, 9 1-2c. to 10c. per lb., and 11c. for single tins.

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM— We quote: Canadian, $1.32; Pennsylvania, $1.58; Ohio, 96c.

WHITE LEAD PRICE CUTTING.

"We have been offered pure white lead at $5.60" is the cry that has met paint and oil travelers throughout the country during the past month or so.

Not many months ago it was almost impossible to buy a hundredweight of white lead in Toronto, even were one willing to pay the highest market price, and while this condition has been modified somewhat as the season has advanced, there is by no means any surplus of lead in Canada, and with the exception of the one quotation referred to, not the slightest sign of any weakening in price. In addition to this, pig lead has been advancing in price for some time past. In view of the fact that the corrosion of lead takes from eight to eleven weeks, besides being a costly process attendant with waste of material, one wonders upon what hypothesis a firm is working to make a cut of from fifty-five to seventy cents a hundredweight.

It is said that the quotations given at $5.60 are "subject to having the lead at the time the order is received," and that in most cases when it comes to "delivering the goods" this proviso is taken advantage of. The whole matter would seem like a joke were it not for the fact that there is a danger of breaking a legitimate price that is none too high to allow merchants to live and continue in business.

COVERING CAPACITY OF PAINT.

In estimating the price of a job it is necessary to have some idea as to the quantity of material required, but no definite and accurate amount can be laid down that will apply to any work, says an Australian exchange. Some very dry and hungry work would absorb a much larger quantity of paint than other new and smooth material might. On two different tests made by an expert it was found that for one, five and two-thirds ounces per yard was used for the priming, with two and two-thirds ounces for the second coats; while on another trial under different circumstances, the first coat took five ounces and the second coat fifteen ounces per yard. For general work, however, in estimating, it may be taken as a guide only that one pound of paint will cover one yard three coats.

EXTINGUISHING BENZINE FIRES.

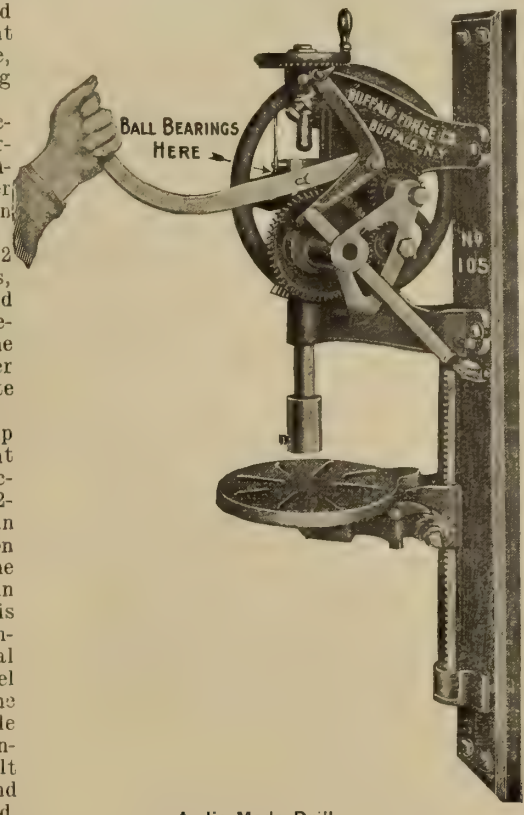
Although water is useless for extinguishing oil fires, yet wet rags applied to the burning parts (of motor cars, for instance) will excluse air and stop the fire. Where the parts are inaccessible to this treatment, sand or flour may be strewn over the burning oil, or a mixture of 15 parts of sal ammoniac, 5 of common salt, and 20 of bicarbonate of soda, all ground fine and sifted, may be used in the same way. Where the doors and windows of the room in which the fire occurs can be closed this should be done, and several bottles of ammonia smashed on the floor. The ammonia vapor will quickly put out the strongest flame, if air be excluded.

NOVELTIES FOR THE HARDWAREMEN

Readers desiring the addresses of the manufacturers or jobbers of the articles described, or any additional information, can secure the same from the Editor of HARDWARE & METAL.

NEW MARLIN GOODS.

The Marlin Firearms Company, New Haven, Conn., are now placing on the market the Marlin repeating shotgun, model 21, take down, straight grip, made in grades "A," "B," "C" and "D," also Marlin Baby Featherweight Repeater, model No. 18, .22 calibre, which is now made take-down by using a thumb screw for a tang screw.



Model 18 is an entirely new construction from muzzle to buttplate. The operating parts engage directly with one another, without intervening links or other connections to complicate and weaken the construction.

The rifle handles, single-shot, the .22 short, long and long-rifle cartridges, black and smokeless, with solid and with mushroom bullets; it regularly repeats with the short cartridges; the long-rifle carrier makes it a repeater with the long-rifle cartridges, accurate and effective up to 200 yards.

Shooters who prefer the straight grip stock and shooters to whom the straight grip and pistol grip are equally satisfactory, will welcome the Model 21, 12-gauge, take-down, repeating shotgun with straight grip stock. While made on the same system as the Model 19, the straight grip feature allows a saving in the cost of construction, therefore it is offered at a lower price, while maintaining exactly the same quality of material and workmanship throughout. The Model 21 has all the superior merits of the Model 19. The solid top frame and side ejector insure safety, comfort and convenience; the peculiar Marlin breech-bolt keeps out bad weather—rain, snow and sleet—also dirt, leaves, twigs and sand. The barrel is a clean, perfect tube with a uniform distribution of metal on all sides, allowing uniform expansion when fired and producing the full, round, evenly distributed pattern for which these guns are famous. The barrel is made extra heavy at the breech, resulting in increased range and penetration.

A JIG-MADE DRILL.

The Canadian Buffalo Forge Co., Montreal, has got out a new series of blacksmiths' drills, Nos. 101 to 105, which supplements its line of over 60 styles of drills. The general design of the drills is adapted to fastening to a post or wall with lag screws. The

A Jig-Made Drill.

largest one, No. 105, is shown in the accompanying cut. Each drill of the series is provided with ball bearings on the spindle, to take up the thrust and to avoid friction. It is remarked that in this feature the company has broken away from what seems to be the time-honored custom of placing the ball bearings on the slowly revolving feed mechanism, and has placed the thrust bearing on top of the high speed. No. 101, the smallest of the series, will drill a 1-in. hole in the centre of a 13-in. circle, and has a feed run of 3¼ in. The No. 105 has a capacity to drill a 1½-in. hole in the centre of an 18-in. circle, and a length of feed run of 4 in. The weights of the several drills range from 98 to 145 lbs. The manufacturer guarantees the drills for five years from date of purchase.

VALUE OF ASSOCIATED EFFORT.

Editor Hardware and Metal: "Associations as at present obtain amongst the plumbing trade are not an effective means of direct profit," are the concluding lines of your correspondent, Anon, in your issue of the 1st inst.

In thus writing he overlooks the credit of his discount account. Is it not palpable that owing to increased purchases the solvent buyer adds proportionately to his discount ability? This is an indirect gain the value of which cannot be minimized. And what is the cause of this improved condition? Is it general prosperity reflecting itself particularly? Partly so, but not wholly. In truth, if he delves a little deeper into the subject he will find that this improvement is nearly entirely due to the associated effort of the master plumbers. He has shown that influences hitherto have not successfully blended. It is neither convenient nor proper now to detail delinquencies. But has he shown that confidence cannot be restored and maintained?

Every compact pre-supposes its violation; constructive ability must have its co-relative destructive ability. To direct is useless, unless you have the means to insist. The conditions which soaked the enthusiasm of the master plumbers of Ottawa have passed into oblivion, and those who were urged to accentuate them have gone there too. Between the altruistic position of the master plumber and his material position a gulf exists. To fill it and make the reward fit the effort is a task calling for immediate action.

The individualistic mind with foresight is always optimistic. It revels in the worst throes of competition — never daunted, always sustained by the feeling that the fittest survive. To such a one it is a sacrifice, a costly blunder, to lose himself in the whirlpool of collectivism. After all, circumstances govern even such men.

Big fleas have little fleas on their backs to bite 'em,
And little fleas have lesser fleas, and so on, ad infinitum.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

The sawmills of the W. J. Hesson Company at the Soo were destroyed by fire. Loss $10,000.

Schram & Brown have commenced the manufacture of cement brick by a new process at Medicine Hat.

The ratepayers of Calgary will vote on a by-law to raise another $10,000 for the municipal power plant.

The Village of Hastings will vote to grant a bonus of $5,000 to the Peterborough Boiler & Radiator Co.

Lawson & O'Gara, architects, are asking tenders for a warehouse to be built in Calgary for the W. R. Brock Company.

The Ames-Holden Company have increased their capital to two and a half million, and will build a new factory to cost $200,000.

Three new banks are expected to open in Calgary. They are the Bank of Hamilton, Bank of Toronto and Eastern Townships Bank.

The Peterborough Steel Rolling Mills Company is asking the City of Peterborough for a bonus of $6,000 and a right-of-way for a siding.

The increase in duties on agricultural implements imported into Australia is likely to seriously affect the Massey-Harris Company, which concern has for years done an enormous trade with the sister colony.

The Dominion Construction Company, of Montreal, have the contract for the new transformer building for the Canadian General Electric Company at Peterborough. The building and equipment will cost about $250,000.

The largest generator ever made in this country has just been made ready for shipment to British Columbia from the works of the Canadian Westinghouse Company, of Hamilton. The purchaser is the British Columbia Electric Railway Company, of Vancouver.

Companies Incorporated.

The Winnipeg Paint & Glass Co. have applied for letters patent to increase their capital stock from $250,000 to $500,000.

The Benjamin Electric Manufacturing Co., incorporated under the laws of the State of Illinois, have been granted a license to manufacture in Ontario.

P. J. Powers Co. have been incorporated under Dominion charter with a capital stock of $45,000 for the purpose of carrying on a general foundry business and take over the business of Powers & Co. The provisional directors are P. J. Powers, M. Lannon, T. McBrearty, Maxime Vian and Lorenzo Dolpe, with head office at Ottawa.

The Iroquois Motor Car Company has been incorporated under Dominion charter with a capital stock of $96,000 for the purpose of manufacturing and dealing in automobiles, motor boats and vehicles. The provisional directors are J. F. Mills, D'Arcy Scott, Alex. Griffiths, G. W. Sutherland, J. H. Crow, W. H. Crother, R. Cooper, G. G. Brown and E. A. G. Pew, with head office at Welland.

BUILDING NOTES.

Strathcona, Alta., will have a $15,000 public school.

A. S. Corbett, Olds, Alta., will erect a $15,000 hotel.

Vegreville, Alta, will have a new school to cost $10,000

Didsbury, Alta., will build a public school to cost $18,000.

R Secord, of Edmonton, purposes building a $35,000 residence.

High River, Alta., Presbyterians purpose erecting a $10,000 church.

The American Tobacco Co., Montreal, will erect a six storey building.

The Merchants' Bank will put up a $10,000 building at Camrose, Sask.

Spout, Waldron & Co., Minneapolis, will build a flour mill at Lethbridge, Alta.

Thomas McCaffery, Calgary, has the contract for the Holy Cross Hospital at $30,000.

P. J. Hansen has the contract for building a school at Mather, Man., to cost $6,000.

Vancouver's building permits amounted to $2,333,665 during the first eight months of this year.

The Keystone Amusement Co., Pittsburg, Pa., will build a theatre on Richmond street, Toronto.

The Lethbridge Coal Mines Co., Lethbridge, Alta., will improve their plant to the extent of $75,000.

Building operations in Wolseley, Alta., include the following: Presbyterian church, town hall, Banbury's new hotel, the Perley block, Hall's block and a new Bank of Toronto building.

BRITISH CEMENT TRADE.

The British cement industry generally is just now in a very flourishing condition, the German competition from which English manufacturers have suffered so much having now terminated. The demand for cement has recently

grown enormously, and manufacturers have unfilled orders on hand sufficient to ensure employment for months ahead. This is to some extent attributable to the requirements in connection with the rebuilding of San Francisco In this respect it is interesting to note that, whereas in 1905 only 11,590 tons of cement were sent to the United States, already, in 1906, nearly 61,000 tons have been exported to that country. A more comprehensive combine is, it is said, likely to be formed among the Thames and Medway manufacturers with a view to maintaining prices.

CANADIAN MANUFACTURERS IN JAPAN.

Alex. MacLean, Canadian trade agent at Yokohama, Japan, writes :

"What impresses the observes and the inquirer at first sight is that Canadian manufactures are not here either on view or in prospectus. There is nothing to suggest the name of Canada—perhaps I should not say nothing, since being refreshed a day ar two ago by the sight of two dray loads of Enderby, B.C., flour so heavy that the attached horse-power was unable to take them up grade to a little Japanese bakery where, from personal knowledge I can say bread is made of a uniform excellence quite up to the Canadian standard.

"This flour would be evidence of the samples and sample orders mentioned in my review of 'Canadian flour in Japan' as showing ability to compete if supply could be assured. However, I have to repeat that there is nothing to suggest the name of Canada, either in the warehouses and shops, or in the advertising columns of the newspapers. The scenic beauties of hillside and plain along the routes of travel are blemished conspicuously by reminders of the brands and blends of Scotch whisky, various foods for infants, etc., and many other foreign and domestic necessaries; but of this blemishing there is none done, possibly because of aesthetic scruples, on Canadian account.

"These lines will apply to practically all lines of Canadian manufacture and production. I have stated often in these reports, in substance, that with a few exceptions everything that Canada grows and makes is represented here in the course of every-day trade, but not of Canadian production. The inference is that Canada does not yet feel the urgency of looking to the Far East for market, because her present markets, home and foreign, are absorbing her output. That there are exceptional examples, in the form of correspondence with this office, of a desire to learn the conditions in the Japanese market and to take the advantages offered, if any, shows that there is a somewhat lively interest felt and operating, which augurs well; but that interest has not yet taken much of a tangible trade form.

Activity of Japanese Markets.

"I notice in the current news that a large cargo, stated at 6,000 tons, of steel rails has been despatched from Sydney on the Atlantic Coast of Canada, via Cape Horn, to British Columbia on the Pacific Coast. That may be regarded as a notable event; but it is only an expression of the activity of the home market. I know the Canadian situation too well to infer from that event that Canadian steel manufacturers are prepared to export their product to Japan, although the transportation distance via the Suez route must be shorter. There will be early future railway extension in Japan, and in Corea and Manchuria under Japanese influence. This, in any event, and without reference to the talked-of change of gauge and the consequent re-equipment of the present 5,000 miles of railway in Japan. With this prospect in view, and prompted by the advertisement of a Canadian Locomotive Company in an East India engineering journal, I wrote to the company in question to the effect that I had assumed that manufacturers of railway plant in Canada would be too much occupied by the home requirements to be concerned with export, but that I had seen their advertisement and would infer from it that they were looking for business, and that I would be glad to place the facilities of this office at their service. In due time their answer was received, to the effect that I was correct in my assumption that locomotive builders in Canada were not in a position at present to take up the question of export work, because of the large volume of business at home. Their foreign advertising was simply for the purpose of keeping their name before the public in the event of their being able to handle export work at some future time.

Direct Representatives a Necessity.

"Directly representing Canadian manufacture, I have knowledge of two agents only sent out within the two years of my experience here, prepared to arrange for business in their respective lines. The first called at this office on his arrival and stated the determination to get business here if it could be done. He spent within a few days of a year, partly in China ports, but mostly in Japan; and upon leaving for home was evidently satisfied with the result. The second has been here three days at this time of writing. He has come after nearly two years of correspondence that will not be fruitless since it has resulted in his coming, with the probability already that he will succeed in establishing his specialty in this market. Let it be understood from this, and much that I have said in former reports, that it does not follow that because Japan is not a hungry fish ready to jump at the first or any fly, she will not take bait that is expertly and temptingly placed before her.

"Every large manufacturing concern in Canada, to whose management it may appear that there should be business available in this country, should regard the cost of sending a special and highly capable agent out here as too small a matter to be considered. The two I have mentioned represented each only one line of manufacture. But I do not see any reason why one capable agent should not represent several lines of manufacture, thus distributing the cost."

Saskatoon council have made a contract for cast iron water pipe for their new water system with the Canada Foundry Co. The tender was about $20,650.

Paroid Roofing Will Make Money for You

READ THIS:

Thousands of dealers all over Canada and the United States are making with Paroid one of their most profitable lines. If you are not selling Paroid it will pay you to get our proposition.

Why Paroid is the Best Ready Roofing Made

Paroid is the best quality of ready roofing made. Railroads, manufacturers and farmers all over Canada and the United States are using it in place of shingles, tin, iron and other kinds of roofings, because it lasts longer and costs less.

We make Paroid from start to finish—we make our felt—the most important part of the roofing, while other manufacturers buy their felt where they can get it cheapest. That's the principle reason why Paroid lasts longest. We could not stand back of Paroid if we did not make the felt.

Paroid is **soaked** and coated with a thicker, smoother, more pliable and durable coating than is on other ready roofings. Send for samples of Paroid and compare it with other kinds. You can see and feel the difference.

Paroid is applied with the **only** anti rust-proof cap made. It insures a tight roof. Other roofs often fail because the cap rusts out. Paroid will not crack and break in cold weather. It is adapted for all kinds of buildings and will outlast other ready roofings.

How We Help You

Our advertising plan has doubled the sales of our dealers this year. It helps to sell their other lines, too.

Send for our proposition and we will mail advertising matter and samples to every likely user of roofing in your town. It will not cost you a cent and can't help bringing you orders. We'll send you all the electrotypes and special things you can use. We'll write letters to prospective customers and send our salesman to help you land orders. Write, telegraph or telephone at our expense at any time.

The Fall is the best season of the year to sell roofing. Can you afford not to sell Paroid?

It won't cost you a cent to try out our proposition and we stand back of every roll of Paroid you sell.

Sign your name to a postal to-day and we'll send you full particulars and samples.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

DEMAND FOR DEAD FLIES.

A ton of dead flies was the strange cargo a vessel from Brazil unloaded recently at London, England. Dead flies are admirable food for chickens, birds in captivity and captive fishes. The river Amazon abounds with flies. Brazilians float down the stream in boats and scoop in millions of the flies which circle in dense clouds just above the water's edge. The flies are killed, dried thoroughly in the sun and packed in bags. They are then shipped. Dead flies constitute one of the richest of foods for animals. For chickens the flies are mixed with other ingredients, such as millet and corn. By themselves the flies are too rich, but their power of nourishment is so great that a small quantity of them has a most beneficial effect. Two years ago the Brazilian Government stopped the exportation, being afraid that the fish in the rivers would suffer by being deprived of this food. But the prohibition has been removed. Formerly dead flies sold at 10 cents a pound, but the demand has grown and the supply so lessened that 30 cents a pound is now charged.

WHAT THE HARDWAREMAN SELLS

The following lines may contain a suggestion for some of our country friends :

Ladies, yes, and gentlemen, too,
Here is something to interest you.
I've opened a store, and it won't take a minute
To tell you most of the things that are in it.

You haven't much time to spare, I know—
But pocket this list before you go.
It may bring to mind something you need,
And the prices are right if you only read.

There are brooms and brushes, and window mops,
Clothes lines and reels and cotton ropes ;
Washboards and wringers and chopping trays,
And washing machines for washing days.

Tubs and boilers, and buckets, too :
Everything up-to-date and new.
Preserving kettles and roasting pans,
Dairy pails and creamery cans.

Everything made of enamel and tin ;
A butter mold or a rolling pin.
Knives and forks and spoons and plates,
Crayons and pencils and children's slates.

Tacks and nails and screws and locks,
Mirrors and choppers and whips and clocks.
Axes and hammers and boxwood rules;
Shovels and spades, and other tools.

There are hundreds of other things as well
Stored on the shelves of which I could tell.
I have the goods, if you have the "tin,"
So let us at once to business begin.

Winnipeg, Sept. 1. . . . . D.G.R.

ARTICLES FOR SALE.

CORNICE brake and a number of other tinsmith's tools in first-class condition for sale cheap Chesney & Smiley, Seaforth, Ont.

BUSINESS CHANCES

HERE is what you want—a tinsmithing and plumbing business in sunny Alberta town, with 1,200 population; no opposition; $3,000 will handle business; lot and building 14 x 36; last year's business $8,000; act quick, good reason for selling. Address, S. Case, HARDWARE AND METAL, Winnipeg. [35]

WELL selected stock of hardware, stoves, tinware, tinshop tools, etc. In first-class section of Ontario. Good reasons for selling. Stock about $4,000. Apply Box 549, HARDWARE AND METAL, Toronto. [39]

SITUATIONS VACANT

FURNACE MEN WANTED — Highest wages are offered to competent furnace men in the largest cities in the west; also splendid openings for mechanics with a general knowledge of steam fitting and furnace work. Apply to The Pease-Waldon Co., Limited, Winnipeg, Man.

WANTED—Hardware salesman with about four years' experience. Write at once with references. Good position for the right man. Apply to The Bond Hardware Co., Limited, Guelph, Ont. [34]

WANTED—Capable young man with fair knowledge of mechanics and good appearance as city traveller in Winnipeg. Good position for right man. Box 57, HARDWARE AND METAL, Winnipeg. [35]

WANTED—First-class tinsmith, must understand furnace work, steady job to right man. Apply stating age, experience and salary expected. Bandman preferred. Good town in Alberta. Box 553, HARDWARE AND METAL, Toronto. [38]

WANTED—Broom and Whisk maker, good wages will be paid for good workman who is steady and likes work. Apply Box 554, HARDWARE & METAL, Toronto.

SITUATIONS WANTED

HARDWARE clerk, with nine years' experience, wants position with hardware firm. Can give best references. Box 554, HARDWARE AND METAL, Toronto.

WANTED—A position as traveling salesman by young man with thorough knowledge of hardware. Now employed on the road. Eastern territory preferred. Box 47, HARDWARE AND METAL, Winnipeg.

WANTED—Position as salesman or Traveller in hardware lines, carriage goods or paints (manufacturing or general wholesale). Age now 47; thirty years experience as traveller, retailing and jobbing, have travelled all over Canada; good references. Apply to HARDWARE AND METAL. [37]

WANTED position in west by retail hardwareman; eight year's experience; general and builders' hardware, stoves, etc.; understands ad. writing and window dressing; can give best reference. Address 544, HARDWARE AND METAL, Winnipeg. [36]

PLUMBING AND STEAMFITTING

HYDRAULIC RAM ON FARM.

I have a spring on side of hill which runs 2 1-2 gallons water per minute. Amount of fall in 30 rods is 4 feet. (1) Would that run a ram? (2) Describe by drawing the ram in detail, and how it would be put in a barrel. (3) Give any other necessary information to put one in. (4) Is barrel best placed in spring or off a distance from it? (5) What proportion of water should be elevated 25 feet high? (6) Where can the best rams be procured? Distance to send the water, 25 rods, to elevation of 25 feet.

The "Reflux Arrester" is a special device sometimes used when the fall is slight compared with the horizontal distance from supply to machine. A tank serves the same purpose, situated between supply and machine, in such a position that the pipe from tank to machine lies on a slope of about 1 in 6. Neither is necessary in this instance.

In reply to the above question, Prof. J. B. Reynolds, of the Ontario Agricultural College, Guelph, writes in the Farmers' Advocate:

In the circumstances here specified a hydraulic ram would work satisfactorily. It would be advisable, on account of the length of supply pipe, to make it somewhat larger than is usually specified. The supply pipe should be, I think, one inch in diameter. I enclose herewith a drawing, showing the relative positions of the supply of water, the supply pipe, the machine and the discharge pipe. It is not necessary to have a barrel or tank to contain the water at spring, though, perhaps, it is generally advisable to do so. The water may be collected at the spring in a barrel or tank, and the supply pipe carries the water from the barrel to the machine. The supply pipe should not be perpendicular in any event, but laid on a slope of not more than one foot in six. In this particular instance the fall is four feet in three rods. This fall is sufficient to work the machine, provided, as I said above, the drive pipe is sufficiently large. It would be advisable, further, to lay the pipes, both the drive pipes and the discharge pipe, underground two or three feet deep at least, in order to lessen the danger of freezing in case the machine should stop working at any time during cold weather. Clean water, of course, is necessary— that is, water free from coarse matter which may clog the valves or pipes. There are many details respecting the working of the machine which can be learned only by experience. Anyone who handles a hydraulic ram soon learns to control the length of the stroke and other particulars. A machine having a water supply of four feet fall, and being required to lift water twenty-five feet, will deliver about 10 per cent. of the amount supplied to it. The quantity of water mentioned by the correspondent, namely, two and a half gallons per minute, would run only the smallest size machine—No. 2. The machine would probably pump about 15 gallons per hour when working at its full capacity. Most of the windmill and power manufacturers handle these pumps and they can also be secured from R. McDougall Co., Galt, Ont.

HANDY TOOL KIT.

A novelty for plumbers and fitters has been put on the market by the H. Mueller Mfg. Co., Decauter, Ill., and New York City, it being the handy tool kit shown in the accompanying illustration. They are probably the first to group these tools and present them to the trade in a strong, neat, compartment box, for convenience in keeping and carrying, and because of its novelty and general usefulness we believe it will be of universal interest to our readers. The kit consists of a centre punch, round punch, diamond point chisel, cape chisel, cold chisel, and a combination calking chisel, arranged in a serviceable compartment box, having the top and bottom lined with sole leather to prevent injury to the tools or box. The box has a strong swiveled handle and the top is removed by a half turn, and will not jar loose or give way. All the tools gre made of high-grade § octagon steel, tempered and hardened at measured temperatures, insuring absolute uniformity of temper. To make sure these tools are all they should be, each one is given a severe practical test, and every one is sold on the Mueller unconditional guarantee.

Mueller Handy Tool Kit.

NEW PATTERN OF STEAM TRAP.

The latest pattern of steam trap is especially adapted to handle large amounts of condensation and will stand high pressure. In a recent test, it discharged 33,000 pounds of water per hour under a pressure of 21 pounds per square inch. In a later test, it handled 46,000 pounds of water per hour at a pressure of 40 pounds per square inch. This capacity is especially valuable in

large steel plants, where heavy condensation in the headers, or "slugs" of water from foaming boilers, are discharged from the separator, and sometimes flood the steam trap. The method of operation is as follows: When condensation has reached the high-water line, the bucket fills, sinks and opens the small auxiliary valve. The pressure under the main valve is thus relieved, and it is forced down and opened instantly by the internal trap pressure upon its upper surface. The bucketful of water is then siphoned out of the bucket, which, rising, closes both the valves and the operation is repeated. No wire drawing is possible, as the trap is always wide open or closed tightly. As it opens or closes without jar, there is no danger of starting joints or pipes and causing leakage in vacuum-pan or other work. Aside from the valve mechanism, which works equally well at all pressures from 0 to 250 lbs. per square inch, the trap contains other mechanical features which are interesting. It has few moving parts, and when once put in position, does its work without further attention. The valve and the seat are located above the high-water level, out of the way of dirt and sediment, which enter with the water. They may be inspected or replaced in a minimum of time by unscrewing the cap. The trap is manufactured at Cleveland, Ohio, being designed to withstand high internal pressure, each one being tested to 1,000 lbs. per square inch, hydrostatic pressure, before leaving the shop.

THE PLUMBER'S APPRENTICE.

The modern apprentice has often proved himself a twin brother to the traditional Irishman's flea. If not exactly of the same species, his fleeing propensity has more than once suggested a decided likeness. The need of the apprentice is unquestioned. He fills a place from the beginning to the end of his career which makes his existence and training a matter of vital importance to the trade. How otherwise can skilled labor be maintained? asked W. C. Johnson at the Sheet Metal Workers' convention at Indianapolis. How during his training can the many and varied services which lead up to the skilled workman, and which are in their way as important to the conduct of the trade as are the services of the trained workman, how shall these services be performed unless the apprentice to whom they belong is in evidence?

The important question follows, how can we secure, retain and develop the apprentice until the issue is realized in the workman who honors his trade and in turn is honored by those who have the benefit of his services? Experience has taught the difficulty of the answer, and at best we cannot attempt more than simply suggest something which may help in the solution of the problem.

The parties interested in the development of the apprentice have so much to do with the successful completion of his career that we shall confine ourselves in this paper to these parties.

The Apprentice Himself.

He must have a two-fold conviction that he will be an honor to the work and the work honor him. The boy should feel that he is capable of learning the trade and show it in his interest in its details and in his determination to master them. Such a spirit is an honor to any station. The trade itself must in his view be worth his pursuit. A trade which has no attractions for a boy is the worst pursuit he can follow. His apprenticeship degenerates into one continuous protest against service, and if continued prophesies final failure. For successful careers give us the boys who enter the shop with the feeling that they will both give and receive. Give us a high purpose to succeed and receive in a trade knowledge the possession of which is a matter of rightful pride.

The parent or guardian is an important factor in the development of apprenticeship life. He should stand between the boy and his troubles. In his ignorance and inexperience the boy sometimes needs the counsel and the will of authority to hold him in place. The impulsive spirit of youth must find its check in the advice of those whose settled convictions and habits make them competent to steer the lad until he has passed the point of danger. That boy is to be pitied who has no such authoritative counselor, and whose lament in later life has sometimes been that he was left to act for himself.

A PERTINENT QUESTION

The question asked in Hardware and Metal of Aug. 11, reproduced below, has brought a goodly number of replies from readers in nearly every Province in Canada. The replies make interesting reading and will be published in our issue of September 29.

In the meantime we repeat our offer to give a year's subscription to every plumber or fitter sending a reply considered worthy of publication as well as an honorary prize of $5.00 to the one sending the best answer. Send in your answers.

The question is as follows:

If you were installing a hot water heating plant having 500 sq. feet of Radiator, and a boiler rated to handle the same amount, and you were asked by your customer if there would be any advantage in installing a larger sized boiler either in the interest of better service or economy in the consumption of fuel, and if so, why? What would you say?

The Associated Workman.

In all pursuits there are men of opposite extremes in their attitude toward their associates. For that workman who refuses the apprentice his kindly counsel there should be no place, save as necessity requires his services. The narrow, unsympathetic, jealous, persecuting spirit of some workmen toward the apprentices who will take their places when they are dead leads one to come very near hoping that the change would come soon. On the other hand the man, who is also a workman, and who is "a man for all that," whose clear recall of his own days of struggle and whose heart sympathy for his embryo fellow craftsmen fans the fire of resolve in the halting boy's heart and gives him a new outlook as to his future possibilities, he alone meets his accountability in the class called to work for the boy's upbuilding.

The employer may play a most important part in developing the apprentice's life. To the employer the final appeal is made. His word is presumably law. He is supposed to direct service and whatever will most effectively secure it. Hence the consideration of the manipulation of tools is not his only duty, but also along with this, supervision of moral character. Character often puts a premium upon efficiency which lack of character discounts. A surly, dishonest, foul-speeched workman, whatever his skill, may pass current with those of his class, but if we mistake not will be rejected by a still larger class whom it is the employer's highest interest to serve. The employer therefore who trains his apprentice not only in mechanical labor, but in the spirit with which he performs it, will win both for the boy and himself all the time.

There is no good reason why this quartette—the apprentice, the parent or guardian, the associated workman and the employer—should not unite in such harmony as to give new meaning and dignity to apprenticeship life. This paper suggests their work in part only. That part rightly performed by each participant must eventuate in a product which from the best standpoint is a workman of whom no one need be ashamed.

RECIPES FOR PUTTIES.

Putty for iron objects.—Ten parts of iron dust or filings are mixed with three of bleaching powder, and enough water to make a workable paste. This is applied to the parts to be cemented, which are then placed together and subjected to pressure for about twelve hours, by which time the mass will have set hard.

Oilproof putties.—(1) A mixture of ferric oxide and water glass will give a very strong putty, which, however, is slow-setting and brittle. (2) Marble dust, powdered glass, and water glass make a putty that is not acted on by oil, but easily breaks. (3) Red lead and water glass, mixed, set very slowly but become quite hard, and can be thoroughly recommended. (4) A mixture of marble dust and water glass sets as hard as marble. (5) Cement, marble dust and water glass form a putty which behaves like hard sandstone. (6) Zinc oxide and water glass make a useful mixture. (7) Zinc oxide, marble dust, and water glass give a hard, solid putty.

Armenian putty.—This mixture is largely used by oriental jewellers. It is prepared by dissolving 10 parts of mastic in 60 parts of absolute alcohol, on the one hand, and 20 parts of fish glue in 100 of water, under gentle heat, 10 parts of 50 per cent. spirit being then added. The two are well mixed together by stirring, and then incorporated with a solution of 5 parts of gum in 25 of 50 per cent. spirit. Finally the mixture is concentrated to about 170 parts by moderate heat on the water bath.

JOURNEYMEN PLUMBERS MEET.

The Journeymen Plumbers' and Steamfitters' International Convention will meet in the Labor Temple, Toronto, on September 17. From three to four hundred delegates are expected.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, September 14, 1906.

No changes in the price of any branch of the plumbing supply business have occurred this week. All lines are in splendid demand, and quotations are very strongly maintained at their present level.

Iron pipe orders are now being filled with greater regularity, as the rolling mills have pretty well recovered from the effects of the recent strike. Although prices on this line are very firm and the demand is heavy, no advances have been recorded.

RANGE BOILERS—Local jobbers are turning over good quantities in this line. Our prices remain as follows: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list. Copper, 30 gallon, $25; 35 gallon, $29.50; 40 gallon, $32 net.

LEAD PIPE—The record price now being commanded by pig lead has resulted in firmer conditions on the lead pipe market. For the present, however, we are still quoting: 15 p.c. f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b., London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS — Conditions are unchanged. Quotations remain as follows: Discounts on all sizes of nipples up to 6 inch, 67½ to 70 per cent.

IRON PIPE—Although a scarcity in some sizes continues, deliveries are now being made more promptly than for some time past. We give the following prices and discounts: Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27; 2 inches, $36.50; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS—Firmer conditions prevail this week. We are quoting as follows: Standard soil pipe, 50 p.c. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER — Conditions are unchanged this week, but in view of the high price now being paid for pig lead, an advance is considered a strong possibility. We still quote: Bar solder, half-and-half guaranteed, 24c.; No. 2 wiping solder, 21c.

ENAMELWARE—We continue to quote following prices: Canadian bath tubs, plate E1, 5 ft., 1st quality, $20.65, special $18.65; plate E11 and E21, 5 ft., 1st quality, $19.50, special $17.15; plate E35, 5 feet, 1st quantity, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.: special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, September 14, 1906

Prices in all branches continue the same as last week. Business is good, and the prospects are that next month will show a large increase in the output. The approaching end of the Summer has made customers anxious to get their goods before a change of weather comes. Heating supplies are especially active, and the amount of business being done shows that the steam and hot water heating trade is steadily increasing in volume.

LEAD PIPE — Prices are without change but still firm. Lead pipe, 8c., discount 15 per cent.

SOIL PIPE AND FITTINGS — No change since the increased discounts of last week. We quote: Medium and extra heavy pipe and fittings, 65 and 10 per cent. off; light pipe and fittings, 60 per cent. off; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—Prices are uniform throughout the trade. We quote: Black, 1-in. pipe, $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS — We quote as follows: Cast iron elbows, tees, crosses, etc., 67 1-2 per cent.; cast iron plugs and bushings, 67 1-2 per cent.; flange unions, 65 per cent.; nipples, 75 and 5 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 and 10 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 65 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 1-2 per cent.; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallon, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS — Prices are the same; business good. We quote: Hot water, 50 and 2½ per cent.; steam, 50 and 5 per cent.; wall radiators, 50 per cent.

SOLDER—There are no changes from last week's prices. We quote as follows: Bar solder, half-and-half, guaranteed, 26c.; wiping, 24c.

ENAMELWARE — Quotations are as follows: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $14.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.90. Fittings extra.

NEW INVENTIONS.

J. O'Neill, New York, N.Y., has a new invention which relates to heating systems in which a by-pass is furnished about the radiators to maintain the circulation when these are closed, and where under certain conditions the movement of the heating fluid is liable to be somewhat throttled at points and surge laterally through the return openings and meeting the flow-water, diminish or neutralize the circulation. To obviate these difficulties and furnish an arrangement having but few fittings and in which a proper circulation is insured are the principal objects of the inventor.

N. Tobias, Kingston, Jamaica, has invented an apparatus having reference to metal tools and implements. The object is the provision of a new and improved stock and die arranged to permit convenient and accurate cutting of right and left hand single threads of the same or different pitch.

A recent invention by L. Kramer, Evansville, Ind., and F. L. Kramer, East Orange, N.J., provides a construction of a water closet seat wherein the greatest possible amount of strength will be obtained, together with economy in labor and material. In order to strengthen the structure, glue or its equivalent is applied at the tongue-and-groove connections to the keys and dowels. The grains of the wood are also run to obtain a maximum of strength.

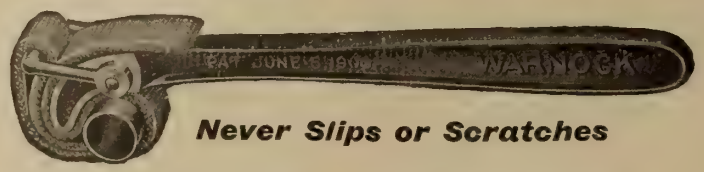
WATER AND LIGHTING SYSTEMS.

The ratepayers of Selkirk, Man., will vote to raise a sum of money to install a system of water works in the town.

The Town of Moosomin, Sask., asks for tenders for a complete system of water works.

Port Arthur will expend $50,000 on their electric power plant.

The Towns of Souris and Boissevain, Man., contemplate installing water works systems.



Battleford, Sask., contemplates installing a water works system at an estimated cost of $30,000.

ACTIVE SALESMAN

Can be secured by inserting a "want ad." in HARDWARE AND METAL. Your advertisement will be read by travellers, clerks and stove dealers in all parts of Canada. The man you want may be in Vancouver, Winnipeg, Halifax, Toronto or Montreal. HARDWARE AND METAL will reach them all.

Rates, payable in advance—2c. per word first insertion, 1c. per word for subsequent insertions.

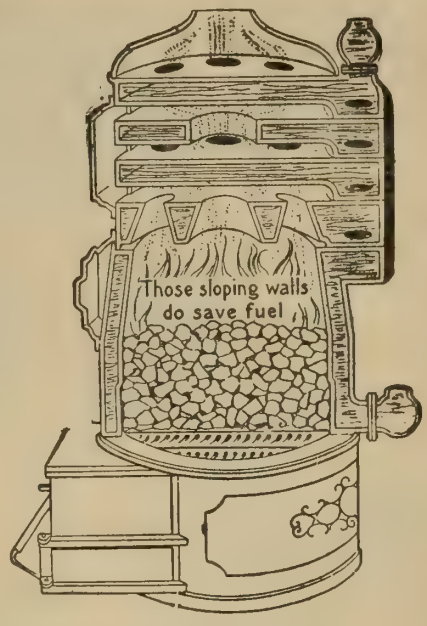
Price cutting doesn't worry the man who sells the Oxford Boiler



Some dealers worry more over cut-price competion on heating jobs than there's any real need for,—they wouldn't have to worry it they handled the Oxford Hot Water Boiler.

The way it's designed, the way it's built and the way its makers help the dealer clinch sales—all make it the one boiler that price-cutting never can bother.

Because nobody who finds out why the Oxford Boiler has hollow-triangular grate-bars, insloped fire-pot walls, and a double-deep bell-flued first water-section is at all apt to let a lower bid tempt him,—it's too plain that the Oxford Boiler will save money every day there's a fire in it.

Once you are equipped with the Oxford selling points and the Oxford selling help—nothing like either in any boiler you know but the Oxford—you'll get the kind of jobs that pay, and get them easier than you think possible.

Your name and address on a post card will bring that which will show you why it must pay you to push

CURRENT MARKET QUOTATIONS.

Sept. 14, 1906

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

Hardware and Plumber—

We have pumps suitable to any demand made upon you by most exacting customers.

Our pumps will do anything that a pump can do, and we will be pleased to give the benefit of many years' experience to any one having pump troubles.

McDougall Pumps are Standard Pumps, and with us it is quality first, last and always, while we ask just as little money as we can get along with.

We have a few catalogues for distribution

Page No. 6

1. The *Wilbern* Barn Door Hanger *will not jump the track,* but is the only Stay-on Hanger that *doesn't require a special track.* It will fit any make, style or size of flat track.
2. A door that has sagged and is scraping the floor, can be raised by one nut; other Hangers must be taken off the door to allow adjustment.
3. Any thickness of door can be drawn snug with the barn, or a door that binds can be drawn away from the barn.

The Wilbern is made of malleable iron and will carry a 1,200-lb. door, is roller bearing on a cold rolled shafting axle, and packed one pair in a box, complete with screws and bolts.

The other fellow hasn't got the Wilbern yet—now's your time to buy.

Have you a Demand FOR Extra Good Chain?

F. & W.

Then sell Edge's.

Edge's Chain

is made of the best refined iron.

It will carry heavier loads and stand greater shocks than any other chain on the Canadian market. We have sold it since 1878, and have found it always uniform in quality and strength.

We recommend it for stump pullers, lumbering purposes, cranes, derricks, anchors, etc.

STRENGTH OF CRANE CHAIN

QUALITY COMES FIRST

in a Revolver. If you do not wish to sell a customer a second time, then it might pay you to offer him a cheap and worthless weapon on which you make a big profit. If you want his future trade, sell him the famous

H. & R. REVOLVER

Recognized as the greatest revolver value for the money. H. & R. Revolvers are noted for their accuracy, safety and durability. Made of the best obtainable materials, in a factory fitted with the most improved modern machinery, operated by highly skilled mechanics, each one is rigidly inspected to insure absolute freedom from flaws of any kind. Every part is accurate to the thousandth of an inch. H. & R. Revolvers are free from shake or rattle, and if treated with ordinary care will last a lifetime and can always be depended on. When you sell one you make a friend of your customer, and he'll come again to buy cartridges or other goods he may need in your line. If you have never handled these goods, it is to your interest to put in a stock at once. They are the kind that don't stay on the shelf, and that make satisfied customers.

A COMMON SENSE TALK.

AIR IS CHEAP. You do not pay rates for air like you do for water, yet a big fuss is made over the impurity of water and very often no thought is taken of the impurity of the air breathed from day to day and night to night.

Crowded rooms, whether in public places, schools, opera houses or factories, require ventilation as well as the private dwellings.

HOUSE BUILDING IS A SCIENCE NOWADAYS AND NO BUILDING IS COMPLETE WITHOUT ONE OF OUR AEOLIAN VENTILATORS.

THE VENTILATOR ITSELF IS AN ORNAMENT and can be made to suit the character of the building either as to size or as to quality of material.

Ottawa, May 30th, 1901.
Ottawa University.
Messrs. J. W. HARRIS CO., LIMITED, Montreal.
Dear Sirs,—Your "Aeolian" Ventilators placed on our University since three years have given us entire satisfaction. BROTHER NORMAND.

Dealers everywhere will find a double profit in handling this ventilator. Write direct for catalogue and booklet to-day.

Learn about our system of ventilating. A pleasure to send books.

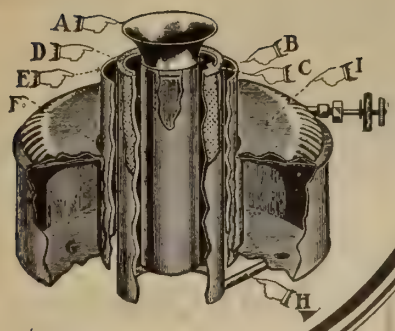
IMITATIONS ARE UNSATISFACTORY ——INFRINGEMENTS ARE UNLAWFUL

To Manufacturers Agents

"A client of ours seeks an agent for his goods in Canada and proposes to advertise in Hardware and Metal if we succeed in finding the person or firm wanted. What can you do in this matter?"

The above letter from one of the MacLean Publishing Company's European representatives is a sample of many received by us.



We have suggested several names to our representative for submission to the manufacturer, but our list of available representatives is necessarily confined to those we know to be reliable.

One of the best methods of getting in touch with concerns desiring new representatives in Canada is to place a small card under the heading "Manufacturers Agents and Brokers" on one of our advertising pages. We keep a list of others on file but a card appearing every week adds strength and may help to land a splendid agency.

The cost is nominal. Write us.

THE ALUMINUM OIL HEATER

More Than a Million in Use

The only Oil Heater absolutely safe because the only Oil Heater equipped with a perfect Safety Burner. Note the construction of our Grand Safety Burner.

A—Flame spreader. B—Air space outside wick tube. C—Air space inside wick tube. D—Wick. E—Outside casing to Burner. F—Air space between front and outer casing. G—Fount for oil. H—Feed pipe. I—Shield resting on top of fount with air space underneath.

No odor, no smoke, no perforations to clog up, no danger. A furnace for heat. Radiates heat like a base burner from sides, bottom and top. Wick taken out and replaced in a minute. Any child can re-wick it.

We guarantee every Aluminum Oil Heater to give satisfaction or refund money. Isn't this the heater you want to sell to your customers ?

The demand for Aluminum Oil Heaters this year is double that of last. People are not satisfied with anything but the best. That's why. Be on the safe side—let the other fellow have the trouble.

Get your orders in quick—you can't get in touch with a good thing too soon. We are making prices that bring the everlasting smile.

THOMAS BLACK, 76-82 Lombard St., WINNIPEG, Man.

Not Cheap, But Economical

There's a vast difference between a range being economical and being cheap!

A cheap range usually misses a link in the quality chain, and if it burns a small amount of coal, or a large amount, the heat is the same.

On the other hand, an economical range is designed not to be miserly with coal, but to be saving. Every piece burned has to account for itself in the oven, or on the top.

If you get our Booklet you will notice there are a tremendous number of references to **THE EMPIRE QUEEN RANGE** as an Economical Range. These references are the result of actual experience.
